ANNIVERSARY NUMBER

AMERICAN POULTRY JOURNAL

JANUARY, 1922

\$3,000 When 65 Years Old!—\$40,000 at 86!

Stark Trees Make Poor Man Rich!

A. Johnson, a Kansas City, Mo. grocer, broke down in health at 65 years of age. All on earth that he had was \$3,000. He secured a little patch of rough land cheap—cleared it himself. Then he wrote us for advice on orcharding—what varieties of fruit trees to plant, etc. At that time, he says, "I didn't know an apple tree from a peach."

Today—21 years later—Mr. Johnson is the owner of one of the famous orchards of the Rogue River Valley Orchard District. He got \$13,000.00 gross from his 1921 crop from 40 acres of Stark Trees. He recently refused \$40,000.00 cash for this 40-acre orchard.

At 86, he is in sound health (because of outside orchard work) and has enough money to be independent. We say that he owes that to his grit. He says "It was Stark Trees—and Stark orchard advice." Look at the photo at the bottom of this ad. It is one of Stark's Golden Delicious in A. Johnson's orchard. This variety of tree

**Bore Apples in 1921 in 11 States
Despite 3 Frosts and 2 Freezes**

**3 Big Books
FREE**

Last Spring [1921] was the worst for fruit in the memory of the oldest inhabitants. But—the remarkable 3-fruit-bloom-bud habit of the Stark's Golden Delicious has helped it to dodge the frosts in many states. Our Stark's Golden Delicious had good crops here (the only variety—except Stark Delicious [red] that matured fruit.) And so had other growers of Stark Golden Delicious in Ky., Ia., Ala., Ark., Cal., Mo., Wash., Mass., Ohio, Ill., Ore., etc. Write for FREE—BIG 1922 "Prize Fruits" Book for facts.

HURRAH!

Grand Champion

of the

Entire Show

With Over 3,200 Birds
in Competition

so jubilates a pleased customer in his letter just received

"MY ARISTOCRAT COCKEREL was Crowned King of All in This Monster Show, etc."

Glorious News—Friend Holterman

Writes Another One

"MY WONDER ARISTOCRAT HEN, BUSY BEE, which I hatched out of the eggs you sent me has just gone into molt and I believe has now stopped laying for the time being.

But—and now listen, Mr. Holterman—SHE LAID EXACTLY 361 EGGS SINCE HER MOLT LAST YEAR. Isn't this glorious? Isn't this perhaps

A New World's Record for Laying?

Thus these two enthusiasts. Reports similar to these are coming by the hundreds, BY THE THOUSANDS. They are coming in a continual stream in every mail from all parts of this country, from Canada, from Mexico, from South America, from Europe, Asia, Africa, Australia—from every continent on the globe. (Perhaps you who are reading this are one of this great army of ARISTOCRAT BOOSTERS.)

—We Win—We Win—Over All

Thus come the joyous tidings from Aristocrat customers everywhere. THOUSANDS OF SHOW ROOMS ARE WITNESSING THE TRIUMPHANT MARCH OF THE ARISTOCRAT BARRED ROCKS TO VICTORY. These Sensational Records which my customers are making with Aristocrats simply stand unsurpassed in the annals of all Barred Rock history.

Our Beautiful Aristocrats Are Wonderful Layers

This ringing message comes from State after State, from Province after Province, from Country after Country—from every Clime and Continent—from "India's Coral Strand" as well as from "Greenland's Icy Mountains."—Everywhere stands forth this great combination of the

ARISTOCRAT BARRED ROCKS

Great Show Birds—Great Layers—Great Market Fowls

The great show birds are also great layers, and great for market. The great layers are also great show birds. These are the three grand qualities which I have been breeding into the "Aristocrats" for many years. They breed it, they reproduce it. (I do not send out any so-called "utility" birds, which is simply a euphonious name for "culls." The name ARISTOCRATS always stands only for the very richest and the very best in poultry.)

POWERFUL BREEDING COCKERELS, CAREFULLY MATED TRIOS AND BREEDING PENS—correctly mated by Holterman himself—can still be had if you act at once. Why not use these birds for your foundation.

ARISTOCRAT EGG ORDERS are being booked now for immediate and later delivery at the following prices: \$15 for 15; \$25 for 30; \$40 for 50; \$75 for 100; \$500 for 1,000. These are ABSOLUTELY THE BEST BARRED ROCK EGGS that money can buy. Send for your free copy of "HOW TO MAKE MONEY WITH ARISTOCRATS."

W. D. HOLTERMAN, Fancier, Box A, Fort Wayne, Ind., U. S. A.

SUBSCRIPTION PRICES

	1 year	2 years	5 years
United States.....	\$0.75	\$1.00	\$2.00
Canada, Cuba and Mexico.....	1.00	1.50	3.25
Foreign.....	1.25	2.00	4.50

TRIAL SUBSCRIPTIONS

In order to acquaint prospective subscribers with American Poultry Journal, we will mail one copy a month for four consecutive months to any point in the United States for 25c. The trial subscription offer (4 months for 25c) is for new subscribers only and not subject to renewal for a period of less than one, two or five years.

NO SUBSCRIPTION AGENTS OR CANVASSERS are employed by us and NO PREMIUMS are given with subscriptions to American Poultry Journal.

A booth in charge of representatives equipped with credentials and official receipt blanks will be maintained only at the poultry shows in large cities for the convenience of our patrons. Do not pay money to strange solicitors representing themselves as agents for American Poultry Journal—simply ask for credentials.

AMERICAN POULTRY JOURNAL sells on its merits and subscriptions should be sent direct to our office at 523 Plymouth Ct., Chicago, Ill.

GUARANTEED ADVERTISERS

Our subscribers are our friends and we use every effort to protect them in every way. We believe that every display advertisement in this issue is signed by trustworthy people, and to prove our faith we guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in this issue of American Poultry Journal.

All we ask is that, in ordering the fowls or goods, you mention to the advertiser that you saw the ad in American Poultry Journal; also that the purchase be made during the month or months in which the ad appeared, and in case of loss notify us of the fraudulent misrepresentation of the advertiser giving us full particulars as soon as it occurs. This guarantee applies to all subscribers on our unexpired subscription list who mention American Poultry Journal when answering advertisements.

TO OUR READERS

Look at the address on your wrapper upon receipt of the first issue after subscribing. See that it is absolutely correct, and notify us of any mistake, no matter how slight. Note the expiration date which appears thereon, and renew your subscription before the expiration date.

If you change your address, give both your old and new address, as well as your subscription number, when notifying us of the change.

CYPHERS INCUBATOR CO., BUFFALO, NEW YORK

BYERS' ORPINGTONS

At Chicago Coliseum
Past 37 Months

76 of my Orpingtons stood under First Prize Ribbons; 117 of my Orpingtons stood under other Ribbons; 193 of my Orpingtons stood under Ribbons; I won 13 out of a possible 16 Firsts on Pens; I have never lost but one Special for Best Display in Buffs, in Whites or in Blacks at this premier Exhibition—Chicago Coliseum, in past 37 Months.

If you would own this kind, buy into the Strain that produces them.

My customers everywhere and the Poultry Journals in which I advertise, know that I deliver maximum quality for the money. Old customers deeply appreciate the sterling worth of my LINE BRED stock because they are producing winners and the kind of Orpingtons that sell. They know the meaning and importance of my most careful, continuous, constructive Orpington breeding for twenty years without intermission. They know that I am conducting a real Orpington breeding establishment. They know that I personally select every bird that leaves my plant subject always to their approval. They know that because of my enormous line of Champion Exhibition bred stock I am prepared to deliver outstanding specimens for any competition anywhere as well as perfectly mated LINE BRED breeding pens for certain instead of uncertain results. My office files are replete with this evidence. And all of this gratifying result is due, I am sure, to my most careful personal attention to and my deep interest in each individual order. There is no substitute for this Champion Exhibition line bred quality and service for I believe in progress as a result of serving best.

PRICES EXHIBITION STARS

These rare specimens will win at any important State or District Show. Yearling Cocks or Cockerels \$50 each. Yearling Hens or Pullets \$25 each. Young or Adult Pens \$125.

STANDARD BREEDERS

This grade possesses the essentials necessary in high grade stock, and will win at the average show. They carry the richest possible blood of my Champions and mated as I shall mate them will produce show birds and excellent sale stock.

Cocks or Cockerels \$25. (2 for \$40).

Hens or Pullets \$10 each.

Young or Yearling Pens \$50.

Mating of 10 Females and Male \$90.

Two Matings (22 birds) \$160.

Four Matings (44 Birds) \$275.

BREEDING COCKERELS

These big, vigorous, Champion line bred Cockerels would improve eighty per cent of the Orpington flocks of America. Remember that one of my LINE BRED birds is worth much more as a producer of superior stock, than some other bird that "looks just as good" but is not line bred. The latter will never enable you to practice corrective breeding or improve your flock. The former will.

Single Cockerels \$7, \$10 and \$15.

Two \$7 Cockerels \$12.

Two \$10 Cockerels \$16.

Two \$15 Cockerels \$25.

EGGS From my finest Champion Exhibition Matings \$15 per 15;
\$28 per 30; \$45 per 50. Fertility and quality guaranteed.

EGGS

GUARANTEE AND TERMS

Give the birds 48 hours rest and if you do not recognize them as fully worth the money, return them and I will refund your money or send other birds for your approval. My terms are cash with order. A deposit of half the purchase price sufficient on advance orders for birds or eggs to be delivered on a specified later date. Plan your showing and breeding operations well in advance. Wire if necessary.

C. S. BYERS - - HAZELRIGG, IND.

Promoter of, Judge of and successful Breeder-Exhibitor of Orpingtons exclusively for 20 years.

INDEX TO GUARANTEED ADVERTISERS

The guarantee of James W. Bell & Co. is back of every advertisement and every advertiser in American Poultry Journal. We will not knowingly accept advertising from a dishonest concern. Advertisements for patent medicines or mining schemes, or any other questionable advertising, are not accepted under any condition. We will not knowingly introduce a dishonest advertiser into the home of one of our subscribers. We refuse many thousands of dollars' worth of advertising during the year because we are not willing to guarantee these advertisers to our subscribers. When answering advertisements mention American Poultry Journal and refer to this guarantee.

BIRD BROS, Box C, MEYERSDALE, PA.

The Schwalge Sectional Incubator

Our FOUR IN ONE has gained a reputation as the most practical incubator for any poultryman—large or small. It is a BABY MAMMOTH. Has FOUR independent egg chambers IN ONE and heated with one heater. A hatch can be taken off every week, if desired.

To this FOUR* IN ONE additional sections can be added within a few minutes. Can be enlarged to 9,600 egg capacity. Will hatch duck and goose eggs as well as hen eggs. Shipped with legs removed and will easily go through 2-ft. door sideways.

"Four In One" 800-Egg Section

EACH EGG CHAMBER IS A SEPARATE UNIT, holding 200 eggs—in two egg trays for convenient handling. Trays may be arranged for PEDIGREE HATCHING, if desired. Any chamber not in use may be shut off by means of a stop-off damper, thus saving oil.

PURE RADIATION HEAT. The heat travels through 4 inch heating tubes, giving a large heating surface and causing a mild heat. Positively no bad air can enter the egg chamber through these tubes.

MOST UNIFORM TEMPERATURE. The heat to the different chambers is controlled before it reaches the chamber (not afterward), which insures the most uniform temperature to all egg chambers.

EFFICIENT VENTILATION SYSTEM, independent of heating arrangement and easily regulated. Makes the chicks strong and healthy.

MOISTURE GENERATOR for dry climates or high altitudes. Water is dropped on hot tube inside the egg chamber and evaporates.

HIGH-GRADE CONSTRUCTION. Sound lumber, 28 gauge galvanized iron and a liberal amount of fire-proof asbestos is used in the construction of the Schwalge Machine. Packed well to hold the temperature very steady.

ALL PRICES REDUCED TO ROCK BOTTOM YET THE QUALITY REMAINS THE SAME AS BEFORE

9600-Egg Machine (12 "Four In One" Sections)

We give the most far-reaching guarantee that any responsible firm is able to give on their product.

Poultry House on Farm of W. D. James

Back of James poultry equipment—back of the proved principles of poultry house construction and ventilation—stands the James Manufacturing Company, undisputed leaders in dairy barn equipment, ventilation, and dairy barn design.

The men who have been so conspicuously successful in helping to make the dairy business more of a *real* business and less of a farming venture have now turned their attention to the solution of similar and equally important problems in the raising and care of poultry. Just as the members of the James organization are practical dairymen, so they are practical poultrymen. There is the same reason for leadership in this new field that there is in the dairy field so notably dominated during the last twelve years.

Money Back If Not Satisfied!

James Poultry Equipment is absolutely guaranteed. It must give entire satisfaction or you can have your money back.

More Eggs—Healthy Hens—No Feed Waste Almost Doubles Capacity of Poultry House

The JAMESWAY bids fair to revolutionize the poultry industry of the country and to enormously increase the possibilities of profits for every one who keeps hens. It solves some of the worst obstacles in poultry raising—obstacles that hundreds of earnest workers the country over have been striving to solve for years. The JAMESWAY makes it possible to get more eggs; lessens the loss of poultry through disease; cuts down feed bills; saves work.

You know what the poultry house sometimes is—damp, cold, poorly ventilated, dark, hard to keep clean. The hens won't lay, perhaps; many of them get sick and die; and in other ways the owner finds it a discouraging and unprofitable proposition.

The new JAMESWAY design of poultry house, JAMESWAY equipped, gives the hens plenty of warmth with draftless, pure fresh air all the time; sunlight; clean, dry floors; dry walls and dry ceilings; nests free from lice and mites; and makes certain that the hens need never be without feed and water.

The JAMESWAY saves great amounts of expensive feeds that now are wasted; increases egg yields; makes the work easy and pleasant.

The JAMESWAY system of ventilation takes off the moisture and foul odors—brings in the pure, fresh air. It changes the air so rapidly that only 2 to 2½ square feet floor space per bird are needed—about half that heretofore recommended. This cuts building costs and upkeep expense almost half.

Many an old poultry house will accommodate twice as many hens by using JAMESWAY Ventilation.

James Poultry Houses Fully Equipped Cost But Eight Eggs Per Hen Per Year

The cost of the JAMESWAY is surprisingly small. Six or eight eggs per hen per year pays the cost and covers the depreciation.

What hen, given warmth in winter, plenty of pure air without drafts, clean, dry quarters, plenty of light, freedom from lice and mites, clean water and the right food before her all

the time—what hen in such a home would not lay at least six or eight eggs more during the winter?

And in addition to greater egg yields, there is a great saving in expensive feed; the saving of the hens themselves from roup, tuberculosis, mites and lice; and the saving of time in caring for the birds.

Eggs for Hatching

FROM

OWEN FARMS

Pre-eminent Matings

Will give you splendid returns on a small investment. More than one thousand customers each year buy from fifteen to several hundred eggs for hatching here at Owen Farms. Over 90% report splendid hatches and fine quality chicks. Several hundred egg customers come here each year for one or more sittings to secure new blood from the same family. The large percentage of repeat orders that come to Owen Farms from satisfied customers is the part of my business that gives me the most personal satisfaction.

1922 MATINGS

Will be far and away the finest ever made here on Owen Farms. A wealth of tested star breeding hens and early pullets that are absolutely mature enable me to make the females in each mating more uniform and of a higher average quality than ever before. Every female has size, bone, perfect health and is a high producer. They will be fed sanely and not driven to lay the last possible egg. This will mean strong, sturdy youngsters that will live, grow and develop into show birds, breeders and layers for you and for me. A star breeding pullet in Pen A last year laid 267 eggs in 365 consecutive days. Other females in this pen did nearly as well. The males are star breeders and show birds. Each and every one selected for characteristics I wish to perpetuate in my flocks and his mates just the ones to form a perfect complement. My long experience in mating Reds and Buffs enables me to state positively that my 1922 matings come nearer to satisfying me than those of any former year, and that they will produce a wonderfully high average quality in the chicks for you and for me.

1922 PRICES

are the same as last year. My 1921 mating list is yours for the asking and the 1922 list will be mailed you Feb. 1st. Eggs from Group I, II, III and IV are \$25.00; \$18.00; \$12.00 and \$6.00 per 15 respectively. I do not mate ordinary utility birds. The matings in each Group are unequaled at the price. **Book Your Order Early**, and hold the date you wish your eggs shipped. 25 per cent deposit will insure your eggs going at time you wish them. This will prevent delay in shipping your eggs in the heart of the season.

BREEDING BIRDS

Have a grand lot of cockerels that will make superb breeders for you. Whether you wish to pay \$10.00; \$15.00; \$25.00; \$35.00 or \$50.00 for your male you will find here the exact bird you wish and unequaled in quality for the price paid. Tell me the weakest sections in your females and will select to correct. Strong, sturdy line-bred birds from my choice matings. Cockerels that have been bred right and raised on free range. A few choice cocks and fine breeding hens in each variety to complete trios and pens if you wish.

OWENS FARMS

Single Comb R. I. Reds and Buff Orpingtons have made history. Their winnings at Madison Square Garden, New York, Boston, Chicago, Syracuse and other leading shows have proved their worth.

Line-bred descendants of generations of winners will help you produce winners.

GUARANTEES

on both stock and eggs are given in every mating list. They are fair and equitable. "Your absolute satisfaction means my permanent success." Write me fully and freely your requirements and will advise you on paper exactly as I would were you sitting beside me at my desk.

No. 1

The New Year Depends On the Breeding Pens

ANOTHER breeding season confronts us. Are we going to accomplish something really worth while in our breeding operations, or are we going to rest satisfied with past achievements? Shall it be progress or stagnation? Much can be accomplished this season to send us forward. And, lest we forget, or become too satisfied with our past accomplishments, much can be done or left undone that will set our foot on the road to blighted hopes and utter failure. The sum total of the new year will depend upon our own efforts. It is ours to spend in accomplishment, if we so choose.

The results we hope to accomplish the coming season hinge directly on our breeding stock. Our breeding pens are the foundation on which we must build our flock and it should be needless to state that our foundation must be as firm as rock. With a good foundation there is no limit to the heights we may hope to attain, but with a weak foundation our best efforts will yield a poor crop of fruit.

The male bird, so often designated as being half the mating, but who is really much more than this, should have the greatest consideration. The male bird influences each and every chick hatched from the particular pen he heads. As a chain is no stronger than its weakest link, so is our breeding pen no stronger than the male that heads it. To use a male bird that is lacking in stamina or is physically deficient in any way, is like putting our foundation on sand—our building will not endure.

Inferior results in young stock can often be attributed directly to the indiscriminate mating of the breeding stock. Haphazard and indifferent selection of the breeders will never get one anywhere. Much time and thought should be expended in putting together the birds that are to constitute our breeding pens. One should establish a standard of health and vitality to which the birds must attain before they are considered as worthy of entering the breeding pens, and then rigidly adhere to a strict policy of using only such birds as come up to the mark. Then, and only then, may we fairly hope to have all our aspirations fully realized. No bird that has ever been sick, no matter though apparently entirely recovered, should be used as a breeder, if we hope to obtain substantial results, for the weakness of ancestor is visited onto the sons and daughters for three or four generations. In judging the condition of the breeding stock we must not merely take into consideration the present condition, but also the state of the health since the time of hatching. Certain conditions often affect the development of chicks, resulting in a cessation of growth for a time. Recovery is often made later and the birds by being forced along apparently develop into all that could be desired. However, such birds are inferior in the matter of constitutional vigor to those that maintained natural and

By OTTO E. HACKMAN

The entire season's effort will rest on the kind of birds that are bred—Sound breeding stock is of primary importance—Do your hatching from hens.

steady development from the time they left the shell until maturity was reached.

Females that have been physically affected at any time may be used in the laying pens with profitable results, provided they are capable of laying a sufficient number of eggs to make their retention profitable, but they are not adapted for the breeding pens. Even in the laying pens, they are usually the first to break down with a cold, and it would be good practice to market them among the first hens culled out. Frequent and strict culling should be the rule and any bird that fails to come up to the mark should be marked so that when the breeding season arrives it can easily be distinguished and eliminated.

Hens Lay Larger Eggs.

It is always preferable to use hens in preference to pullets for breeding purposes. Pullets usually are insufficiently developed or matured to prove creditable breeders. Good results may be expected, however, from pullets that have been hatched very early and that have developed steadily and naturally, and that have been fully matured before commencing egg production and have been laying some time previously to being used as breeders. Pullets, most usually, lay small sized eggs, and small eggs as a rule produce poor results in hatching. We want good, big eggs, chuck full of vitality, for from such may we expect to hatch big, lusty, livable chicks.

Another thing that affects the breeding condition of the pullets is the strain they undergo incidental to laying. The ordeal the pullets undergo during laying enervates them to such an extent that good breeding results will not be obtained from them. Hens, however, are not affected in this way. They have passed through at least one laying season previous to entering the breeding pens, and will have fully recuperated their strength during the rest period after molt. Then, when the breeding season again comes around they are in the pink of condition and will, other things being favorable, produce worth-while chicks.

One should also exercise care in the selection of the hatching eggs. No abnormal sized eggs, either too large or too small, should be used. Those of ordinary size, the kind the hens usually lay, will produce the best results. Those females that have not the physical stamina to stand up under the strain of heavy egg production should be eliminated from the breeding pens. When they break down under continued production we may rest assured they have not the high vigor characteristic of good breeders.

Range and Feed.

Whenever possible the breeding stock should have free range. Free range birds always give better results when it comes to producing worth-while (Continued on page 40)

Advance of the Single Comb White Leghorn

THE almost universal selection of Single Comb White Leghorns by those farms which measure results with a "dividend" yardstick, and the enthusiasm shown by the smaller breeder-fanciers of this variety in their efforts to improve their stock, are more truly indicative of the comparative merit of Single Comb White Leghorns than volumes of mere words.

As a matter of fact, the White Leghorn has proven title to its place of leadership in spite of numerous handicaps of injustice and lack of harmonious action by the breeders.

It is to be expected that breeders and fanciers of other varieties, especially the dual-purpose (sometimes, unkindly referred to as doubtful-purpose) breeds should advance every argument which would tend to stem the tide of advancement of the White Leghorn, and so long as they hold their claims within the bounds of reason they are perfectly right. It is a pleasure to state that seldom, if ever, do we find such breeders exceeding their proper limits. But, we have suffered by improper statements made by pseudo-leaders in various walks of life.

Reply to Criticisms of the Leghorn.

Only recently, the editor of a prominent poultry paper of national circulation, allowed his personal feelings or prejudice to supplant his unbiased judgment sufficiently to print as unjust an attack on Leghorns, as a whole, as was ever perpetrated on any breed or variety of livestock. In this malignant denunciation, said editor reached the point of "voicing a personal prayer" to producers of other breeds and varieties to "come to life" for action which would not let "the Leghorn breeders 'run away with things.'"

And why, one might ask, should such a writer be moved to vent his spleen on a variety which has reached such a point of popularity? Chiefly, according to the balance of his denunciation, because the Leghorns "are strangers in his distinguished company," which is comprised of the yellow-meated, tender-muscled fryer, the small roaster, the large roaster and the unequalled capon."

To the intelligent, informed reader this is a most foolish indictment—it is a self-evident fact and one, in acknowledgement of which, the Leghorn breeder exclaims "Thank the Lord!" for he knows that the production of "flesh" is a matter of doubtful profit, and that the maintenance of any unnecessary flesh on his egg producers is sheer waste of money.

But, even more damaging to the advancement of the variety have been the personal opinions expressed by authorities whose very limitation of work and observation leads them to narrow-gauged, one-sided, and unjust conclusions. Such a condition was used as an illustration, by the above mentioned editor, to bolster up his lack of argument. He said: "In the Philadelphia offices of the U. S. Food Research Department, an official high-up in a knowledge of the facts and in public esteem, said to us, back in 1918 while our country was engaged in the World War, 'D—— the Leghorns! I look on them as almost a public misfortune.'"

To those who know the office to which reference was made, and the workers in that office, such a statement is not surprising for the time and attention of this office is centered not only on poultry alone, but also on fish, oysters and other food products, and instead of having a balanced view of the poultry industry, they unjustly condemn the Leghorn—not for the fault of the Leghorn, but—because producers of "butcher" stock varieties have not been able to put production of table poultry on a sufficiently profitable basis to meet the demands of the world markets. Consequently, worn-out Leghorn hens, and stags, are re-

By **ARTHUR F. ROLF**

Breeders of S. C. White Leghorns now organizing to repudiate false criticisms, and to protect the interests of breeders in establishing standards and widely disseminating knowledge of the standard ideals.

quired to meet the needs of consumers. The Leghorn, having returned such a good profit in eggs, can be sold at a price which decreases the demand for the more expensive "quality" meat.

Bless you; the White Leghorn breeder makes no claim for the production of quality meat (other than that the cockerels, properly handled, will make squab and small broilers

equal to any), but base their claims for superiority wholly upon the ability of this variety to return greater dividends on the amount invested than any other. To the investing producer, it matters not whether he produces eggs, meat or feathers—the line which will give him the greatest return will have his attention. And, as we have said before, existent conditions show where this profit lies better than words could outline. But, we do not object (and hope, in the near future to perfect organization to the point that our objections may be made more evident) to men, or women, whose work places them in positions where their opinions carry weight with the uninitiated, allowing their personal likes and dislikes to bias their public opinions.

Even such injustices, however, have not been responsible for the chief drawback which has handicapped the advancement of the White Leghorn, according to the ideas of leading producers of this variety.

A Community of Interests Speaks.

With the re-organization and development of the National S. C. White Leghorn Club, of which this writer is secretary, the breeders of this variety have found a means of voicing their sentiments in a sufficiently large voice to command respect, and at the same time have found an effective instrument for harmonizing ideas which were in slight conflict, and for educating the world at large regarding the true facts about White Leghorns.

It is doubtful if any breed or variety of poultry or livestock has ever suffered more than the White Leghorn, on account of lack of knowledge as to what actually constitutes a Leghorn. The Standard of Perfection, published and sold by the American Poultry Association offers a means whereby, in consideration of certain sum of money, a person may obtain the only official description of the ideal White Leghorn.

The fact that such a book contains the Standard descriptions of a hundred, or more, other varieties of chickens, turkeys, and waterfowl, makes it so expensive that it rarely ever gets into the hands of the very man who needs it—namely, the prospective beginner with the variety. In fact, but a small percentage of those who are breeding, exhibiting and advertising purebred poultry have ever read, thoroughly, the Standard description of their variety, let alone owning a copy of the Standard for frequent reference.

As a result of this lack of knowledge regarding the essentials of a real White Leghorn, a few "promoters" have been able to cash in on the popularity of, and demand for, the variety and they have been able to dispose of large numbers of birds whose chief claim to the title of White Leghorns is that they are white (more or less), have large combs, and produce white eggs (or with but slight tints showing the traces of other blood which "crept in" during the dim past). The innocent purchaser of such stock, having faith in the "name" and literature of such seller proceeds to sell their progeny to his neighbors in good faith, and its dissemination proceeds, to the lasting injury of real Leghorns, and only education can ever check it.

The National Single Comb White Leghorn Club does not care to waste any time shouting about its future plans—we prefer rather to devote our (Continued on page 54)

Need of Adequate Land for Poultry Farming

I AM led into a discussion of the relation of land area to the number of fowls kept upon the plant, because the problem pertains to the future successful development of the poultry industry, and because I believe that the subject is of far greater importance than many may appreciate. My remarks are based, not alone on my own personal experience with poultry, but also upon the experience of those who have made a life study of poultry culture.

The first thing I wish to make clear is the enormous debt we owe to those who have gone before and paved the way towards giving us practical methods for conducting large flocks of fowls successfully. The numerous inventions for comfort and convenience of our fowls, the methods of selection, the feeding schedules carefully worked, the marvelous use of electric lights to increase winter egg production, are but a few of the contributions which have placed poultry raising on a par with any other agricultural enterprise. I sometimes marvel, as I look back over the years, that there were commercial poultry farms then which made money—when we consider how little we really knew and how blindly we groped for light on many vexing, difficult and discouraging problems. With a great increase in our wealth of information, available to anyone today who may ask for it, or has the desire to study, the man or woman engaged in the poultry business in this year of 1922, has far better chances for making his or her enterprise a success with fewer risks of failure than ever before.

Encouraging, indeed, is the ever-growing list of successful poultry farms and communities, and still more encouraging the type of people taking up poultry culture, either as a life's occupation or as an aid towards an increased income as well as the personal pleasure derived from it.

As the demand for better and fresher eggs has grown in past years, we find that poultry farms have been springing up nearer the greater centers of consumption. Around New York, Philadelphia and Baltimore in the East, around Chicago, St. Louis, and Kansas City in the Middle West, and around the larger West Coast cities, we find a quickly growing list of poultry producers, both on a large and small scale, ranging from a few hundred to several thousand fowls. This is the logical and proper development. Closeness to the point of consumption means fewer chances for spoilage, are important considerations for small shippers.

Poultry Districts.

In comparatively recent years a number of poultry communities have sprung up, communities where the

By H. G. FORSTER

A highly specialized poultry plant on limited ground leads to an intensification that may prove dangerous—The tendency is toward more land for poultry operations.

keeping of chickens has developed to such an extent which requires that almost every available square foot of soil be employed in their raising and care, to the exclusion of almost all other lines of production. These centres have been selected for their favorable soil, climate, transportation, or other advantages. In most cases the nucleus was one or

two successful poultry farms, which in turn attracted others.

The States of California and New Jersey have so far been especially active in this matter of poultry concentration. Petaluma, Calif., is the greatest poultry growing and egg producing center in the world. Vineland, in New Jersey, and Toms River, N. J., are two Eastern centers receiving the greatest attention today. As time goes on these districts will be developed still farther and others will spring up and become important producing localities.

No one conversant with the facts will deny that such centers offer the poultryman many advantages. The progressive associations having made these communities possible are an inspiration and a source of much help to the producer. By the power of co-operation each man has a chance to buy his supplies and other needs at lower than individual prices, and he may market in a better way and receive for his products a better-than-individual price. The best methods of buying and selling are thus provided, and all of us realize what a relief this is to the busy man engaged in producing as many eggs per year and as many pounds of poultry flesh as his time, means, and acreage will permit.

There are, however, distinct problems in connection with the intensification of poultry operations in highly specialized poultry communities that are sometimes not understood nor appreciated by the producer. Especially to the beginner such a concentration means an ideal arrangement, and he can see no fly in the honey of success. However, there are dangers, as we shall see upon consideration.

Some months ago I had occasion to ride by motor from Trenton to New Brunswick to attend the annual Field Day of New Jersey Agricultural Experiment Station. As was natural, we "talked shop" on the way. One of the questions that arose was whether I thought there were any special dangers or problems connected with the development of a large and thickly settled poultry community. I gave my views, and as luck would have it the speaker of the day, in his annual address, substantially stated the same thing—namely, that there are distinct problems in connection with intensi- (Continued on page 42)

An intensive system under which three to four thousand layers are kept on one poultry plant in California. This kind of housing saves many steps and much labor, but entails danger of contamination.

A close-up view of one of the houses on the California plant. The fowls are not permitted range. Under such conditions ventilation, exercise and regular feeding become of great importance.

Contented and Active Hens Are Better Layers

OLD Nature sort of planned for the hens to lay eggs as winter waned and the days of spring seemed close at hand. January, which comes in the heart of winter, and just before egg prices begin to wane as a result of Southern receipts, is a month in which the hens are being pushed as hard for eggs as if nature had commenced that gentle stimulation of production by longer days and milder weather.

Poultrymen are fast learning to imitate Nature and so take care of the layers that their egg producing organs respond and function. Tis a matter of breeding the hen, feeding the hen, and housing the hen. The elusive, but ever popular, winter egg, the goal of practically every poultry raiser is, therefore, an unnatural thing, as it were. It comes as the result of special management of the hens. And getting it is not a particularly dangerous thing, providing it is done right. In other words the careful poultryman realizes that his hens are under a certain strain in producing eggs out of the natural season, when their eggs were originally intended for the propagation of the species. This fact immediately suggests that along with feeding and management for winter egg production must go a certain regard for the maintenance and development of the health of the laying birds. Healthy hens! Absolutely essential to continued and profitable egg production! This article is written purposely to suggest a few simple, yet important, ways in which the poultry raiser and keeper may tend to safeguard the health of his hens.

Hen Houses.

Providing the hens have been healthy, strong and vigorous when placed in the hen houses at the outset of the winter season, there is scarcely good reason why, with proper attention and care, the general health and vitality of the average flock of hens cannot be maintained throughout the cold days when closely confined to the houses. But—this will not occur by itself. The hen house is the immediate environment of the layers, and its condition regulates directly their health or ill-health, as the case may be.

Every hen house should be dry. The floor, especially, should be perfectly free from cold, damp feel. The litter should be deep, clean and dry. Dust is far better than moisture in the litter. The hens live down there in the straw, remember. Keep it in good shape, or don't expect them to be healthy.

The hen house should be light and bright. Men and women respond to bright, cheery environment. The hens do too. Its an absolute fact. Make the house light and bright by providing plenty of windows through which the sun can shine for the greater part of the time on winter days. Sunlight is not only invigorating and brightening, but it is Nature's best disinfectant. Then, further, make the house bright and cheery by whitewashing the whole interior with a good disinfectant whitewash. A home-made formula which the writer has used many years with unflinching success, can be made by taking six parts by volume,

By Willard C. Thompson

Healthy hens are profitable—Hens can't afford to have aches and pains during the laying season—Feed, house and care so that the egg organs respond and function.

of cream of lime, one part of kerosene, and one-half part of any good commercial disinfectant, a number of which are easily procured in any town or city, and dilute with water as desired. By cream of lime is meant fresh stone lime (preferably) slaked with boiling water and thinned to the consistency of thick cream. If hot water can be used throughout the quality of the white

wash is better. Add to every six or eight pails of this about a pound of lard and a quart of salt. Apply with a force pump and apply evenly to the interior surface. The preparation dries perfectly white, kills disease germs, and red mites. Keep it stirred frequently during application, and strain if necessary before placing in the force pump.

The hen house should be constantly supplied with fresh air. It is vital to winter health. Open up the windows and curtains on the nice days, and never be afraid of the fresh air. Avoid drafts, and low temperatures, of course. Proper ventilation often corrects excessive dampness in the winter poultry house.

Colds.

In the best of regulated poultry flocks, even in ours, as they say, there will sometimes appear signs of colds, evidenced by sniffing, and difficulty in breathing, and by the gathering on the nostrils of dirt and dust. Neglected colds may develop into something more serious, as eye roup. Colds

are the frequent result of exposure to sudden changes of weather conditions, or drafts, or dampness in the house, or lack of exercise and consequent lack of vigorous circulation of the blood stream. When they are first seen get busy. The best insurance is to treat the individuals, by washing the eyes and nostrils with a solution of boric acid, made by dissolving a teaspoonful of boric acid in a cup of hot water. With a medicine dropper insert

Sun light in the hen house is an enemy of Disease.

some of this material into the nostrils on either side. It is also well, if the colds seem rather wide spread, to vaporize some good disinfectant before the flocks on the perches at night. Place a heated brick in the bottom of a pail and place the pail on a bench so that the top of the pail is about on a level with the birds and about three feet in front of them on the perches. Pour about a quarter of a cupful of disinfectant on the hot brick. Lower the front curtains, but not the curtains in front of the perches. The fumes arising from the pail will drench the perching chamber and will be inhaled by the birds with benefit to them. One such dose will usually check an epidemic of colds. It is very useful in cases of epidemics of chickenpox, roup and canker also.

Add to this treatment of either the individuals or the flocks some extra attention to the rations, for the birds need coaxing along at that time. Whenever the hens are somewhat under the weather, whet up their appetites by feeding them a moist mash, moistened with sour milk, and to which has been added a good tonic. The writer has had wonderful success with the old Maine tonic made up of one pound of (Continued on page 62)

Barred Plymouth Rocks—Dark and Light

THE very interesting editorial on Barred Plymouth Rocks in the December Journal inspires me in defense of my personal position upon the breeding problems of this breed, which is that in their mating and accomplished results they comprise two distinct varieties. Let me state at the outset my appreciation of the eminent fairness of the Journal's management in welcoming debate from the opposite side. And just here I will not pass over the opportunity to express my warm approval of the Journal's excellence in its several appointments.

With which introduction I will proceed to the business in hand. Mr. Platt has stated in the editorial on Barred Plymouth Rocks in the last issue that "Some go as far as to say that there are two varieties of Barred Rocks, the Dark Barred Rock and the Light Barred Rock. There is only one variety. There is no issue on this matter."

As the original first user of these terms, Dark and Light, in this connection, I plead guilty. This was a dozen years ago, or less. And this suggestion caught on, slowly at first, but so effectually that the old designation of the two varieties as cockerel-bred and pullet-bred have become all but obsolete; in fact, confined to the usage of a very few conservative breeders.

Let us first agree upon the significance of the term "variety." To express my understanding of it, it applies to things which, being similar in a general way, still display special features of difference. In this way the Rosé Comb Leghorn differs in the one sole feature of comb from its single comb conquerer. As every experienced breeder well knows, this distinctness may be made to disappear in a single season's breeding together of the two comb types.

The case is different with our Barred Rocks. I am setting forth no mere theory in claiming varietal distinctness; for the fact that classification of our breed in a large majority of the exhibitions East and West demonstrates the

Both varieties are actually bred by advocates of the one-variety program—Their distinct color ideals—The demand for official recognition of both varieties a popular movement.

actuality. In this connection I recall an old story of a lawyer and his client who had been jailed without warrant: "Do you know," said the lawyer, who visited his client in jail, "that they can't put you here?" "But I am here," urged the victim. "But I say," repeated the lawyer, "they can't put you here." "But I am here," was his persistent rejoinder. Just so with the Barred

Rocks; two universally recognized varieties. They are here.

Now, if any would challenge my use of the word "universally," I will demonstrate that recognition of two varieties is in force even by those who are most loud in objecting. I hold in my hand a price-list of stock for sale issued by a leading breeder. Wherein I find all stock described as specifically either cockerel-bred or pullet-bred. In other words this breeder recognizes distinct breeding classes as to their origin; and when he offers same for sale he still attests to their distinctness. By what perversion of logic do they cast aside this distinctness when competing for prizes at shows committed to the one variety policy? To claim that distinct breeding or sales "classes" are not equivalent to "varieties" is a mere quibble—evasion—a play upon words—verbal trifling.

Cockerel and Pullet Lines are Distinct

Now, the only possible way out of our difficulty is to presume that specimens, competing under the one-variety rule are neither cockerel-bred nor pullet-bred, strictly speaking, but the product of skillful blending of the two.

And this brings us to the oft-repeated claim that the two varieties as the result of inter-breeding are approaching a common condition as to color: which argument is generally embellished with the confident assertion that the two sexes likewise will soon partake of a common shade of color. Now this idea exists better as theory than in actual accomplishment. The story is a familiar one of how a breeder once made a successful blend of this sort; and some years ago was winning blue at (Continued on page 56)

More and More New Varieties Encouraged

SO MUCH may be said pro and con concerning the recognition of the rose comb varieties, and also some of the newer varieties, that the writer, has hesitated much in coming into the limelight again with his scanty contribution to swell the great fund of more helpful writings by other men. Nevertheless, he has become so stirred in spirit at the seeming indefiniteness in the poultry world, that he has decided to risk shooting from his quiver at least a few arrows at a venture. First of all, then, why hesitate to recognize in the fullest way any or every rose comb variety of any breed, when its counterpart, the single comb variety of that breed, has a recognized place in the Standard?

Every breed has its own and distinct type, and, if the Rhode Island Whites do not possess a type different from the White Rocks or Wyandottes, why should they be admitted to the Standard at all? But, if they do have a type all their own, why all this dabble about recognizing both Rose Comb and Single Comb Rhode Island Whites?

The writer has no particular interest as a breeder in anything called "Rhode Island," any more than he has in anything called "Jersey," but he is writing for the common interest when he says, that the rose comb of any variety has as much a right in the Standard as the single comb. He cannot prove this more than to appeal to what is fair and practical, for if there is beauty in a single comb, surely there is in a rose comb: and, if there is any practical reason why we should have a single comb, how much more is the practical nature of the reason why we should have a rose comb.

We are a bit partial, we confess, to the beautiful rose comb. In our humble opinion, every single comb variety in the Standard should be matched, if possible, by a single comb variety of the same breed. You may ask: "Would not this burden the Standard beyond what it could endure?" No, for both the single and rose comb varieties could be, and should be, included in the one and same description. Type, color, weight, etc., all should be the same, save a separate description of the comb. All of which would save space and be consistent. In this we need "system," but we need some sensible system.

All Wyandotte fanciers and breeders should feel the benefit and satisfaction there is in handling that good, old American breed, because they are not pestered with the idea of a single comb. And the reason is not far to discover. The rose comb has proven so satisfactory, that nobody, so far as we are aware, has ever suggested a Single Comb Wyandotte. But the rose comb distinguishes the Wyandotte as a breed and we are pleading for rose comb varieties of a breed, where the single comb variety already exists. While it is quite true that we already have a considerable number of rose comb varieties, some of the newer ones not yet recognized by the Standard, and it appears to us that the creation of rose comb varieties of all the single comb varieties now in the Standard, should be encouraged and not discouraged.

Moreover, we say without blushing or apology, that, if any single comb variety is already in the Standard and merits the place, just as soon as the rose comb variety has become sufficiently demonstrated and established, which should not require a very long time, it should be quickly accorded Standard recognition, without years of waiting. Just add to the Standard text that one feature, the comb, and that is all the fuss there is about the whole matter.

Now just a word about the newer varieties at hand, and those that are yet to appear. We have Rhode Island Reds. Candidly we do not need "Buffs." It appears that we shall soon have in the Standard Rhode Island Whites. But somebody has already said, that we cannot have Rhode Island

*By Dr. George B. Edwards
and Plummer McCollough*

Should the making of new varieties be encouraged?—Should all new varieties be given official recognition?—Dr. Edwards presents the case in favor of more varieties—Mr. McCullough asks for a variety-making holiday.

Blacks. Well, that is frank enough, but let us ask the objector, Why?

If you are a big fancier, you will at least say that we might have Rhode Island red, and Rhode Island white, and Rhode Island blue, in the good, old Rhode Island kind, because that would savor of true Americanism. But why do you object to black, since the red and the white require the black to make the blue?

I speak chiefly as a fancier, but, if we have Black Wyandottes, Black Minorcas, Black Leghorns, Black Cochins, Black Javas and Black Orpingtons, why not have Rhode Island Blacks also? And, if anybody can produce them, why not Rose Comb Rhode Island Blacks? Let the judges in the shows decide whether they are true to name, and, if not, let them be rejected. Or, let committees be appointed, it matters not, so long as a good thing is owned and recognized.

Rhode Island Blacks with black plumage and beautiful yellow legs would prove a wonderful production from the fancier's point of view, and would by no means conflict with the old Black Javas. The Javas are a splendid variety, doubtless. In them you have black shanks, whereas any black chicken with yellow legs it seems to us ought to win many admirers.

The Black Wyandotte breeders are having a fine time among themselves, and no one has any quarrel with the Black Wyandottes. They are very attractive, and a worthy variety for utility. True, those who breed them may have a hard time getting sound black under-color and bright yellow shanks, but what of that? That is work most inviting for the fancier.

We are by no means exploiting the Rhode Island Blacks. We would go further and say, that there is room for the creation of a Black Plymouth Rock, with all due respect to the Java. We never owned a Java, but we are willing to receive the testimony of others, and believe that they are a very distinct and worthy breed. Still, we believe a Black Rock with yellow legs would, as an American product, be on a par with Rhode Island Blacks, and could not be despised by any American fancier.—Dr. Geo. B. Edwards.

Stop This Race for Novelties

By Plummer McCullough.

I notice with interest in the November issue of American Poultry Journal that Theo. Hewes has an interesting article headed, "What About R. I. Whites," in which Mr. Hewes discusses the advisability of admitting them to the Standard and after citing that they have met with all requirements covering the admission of new varieties, says that for one he will vote for their admission at the next annual meeting. I also note that Editor Platt has a little to say regarding a variety of Rhode Island Blacks. I fully agree with this opinion and hope that there will not be a variety of Rhode Island Blacks originated. As a matter of fact, there are a number of us who do not think that we need a Rhode Island White. Of course the Rhode Island White is an actual fact as far as its existence is concerned, but we have always thought that it was a great mistake for breeders to breed and spend their time on this variety, particularly the single comb variety.

The Single Comb Rhode Island White, as Mr. Hewes says, is very similar in type to the White Plymouth Rock. The Rhode Island White has the long back and body, the white color of plumage, same red eye color, same five point single comb, same yellow color of shanks and toes, making it entirely similar to the White Rock. On this basis it should not be admitted to the Standard, in the writer's opinion. Mr. Hewes says that there are hundreds of breeders who have financial interests in this variety, who are members of the A. P. A., and who are asking (Continued on page 48.)

Largest Poultry Show In Coliseum's History

AS WE looked over the array of birds in the Chicago Coliseum Poultry Show, Dec. 6 to 11, 1921, we felt strongly the fact that the breeders of today are the great breeders. Other decades have been marked by notable exhibits put down by great breeders. But modern breeders are carrying high quality into all the classes, and they are going farther than ever before in producing a whole chicken rather than riding particular hobbies. And why should not the breeder of today excell? He is the old breeder, regardless of his years, for he may profit by all the accumulated wisdom of the past.

Even the casual visitor to the Coliseum could not fail to realize that a world of work was represented by the hundreds of superior specimens on display. None of them had come by chance. Each winner was the product of thought in breeding, tracing back for a series of generations; each bird represent good feeding, adequate housing and proper care which was necessary to grow out all the good that had been bred into him; and at last, the pains of conditioning for the show!

Taken as a whole, the exhibition was an art gallery in which breeder-artists had contributed the works of their handicraft. Visitors stopped to admire this living picture; others passed on to stop and linger in front of another coop. Of all the aspiring artists, no one claimed to have attained perfection, but all confessed that they were seeking perfection. Competent judges passed on the productions of the different breeders. And now it falls to us to report, with such facility of pen as we command, the qualities of the different winners.

One can hardly realize how many birds there are in a big show of this kind until he begins to make a systematic survey of all the different classes. In going over a show in this way differences that exist between varieties are very noticeable. Thus it is that we find some of the Western Barred Rocks very different from the fine White Rocks. Is it that some of the Western Barred Rock men are inbreeding their ideas, when the best thing that could happen to them would be to get out of Barred Rock aisles for a few hours and study the qualities necessary for birds to possess before they can win in other important classes?

In traveling over the show from end to end, up and down the aisles, one meets many people and hears much. There was a wholesome atmosphere in the show this year. The birds as a whole were shown in a highly commendable condition. There was some discussion about a R. I. Red hen, but the feeling prevails that with Mrs. Mahood elected president of the Red club, this question of processing will be sternly dealt with for the first time. That is well.

By FRANK L. PLATT

Five hundred specimens in excess of record year of 1912—Splendid weather — Poor attendance — 438 Barred Rocks — Not that many Wyandottes of all varieties—Best quality ever cooped in Chicago.

It used to be that the defeated exhibitor went home bruised but spurred on to breed better birds, like the wounded oyster that mends its shell with pearl. Japanese scientists have found that by irritating the oyster they can manufacture any number of pearls. The result is that natural pearls have had a slump and many of these once precious jewels of the royal and wealthy are in the hands of merchants to

be sold. Sound values can never be built on artificiality, not even in pearls where the real cannot be distinguished from the manufactured. So far as possible no exhibitor should ever be allowed to win out by artificial means, and this was the feeling that pervaded in all quarters at Chicago. We have never seen nicer quality right through or fairer competition in the Coliseum.

The show next year will be held Dec. 5 to 10. It is planned to advertise the event in the Chicago daily papers so as to bring out an attendance. It is too bad to have such a big and fine show, with relatively few people to see it. Manufacturers who buy space at an exhibition are entitled to an audience, and breeders should be afforded wider contact with the public. The weather was very favorable and the birds went home without any danger of frost.

In the student judging competitions, teams participated from the state agricultural colleges of Oklahoma, Iowa, Nebraska, Indiana, Missouri, Kansas and Michigan. Oklahoma and Indiana stood highest, with G. W. Ludwig of Oklahoma the high man. Mr. Ludwig will judge the utility classes at the next Coliseum show, an honor that each year is to go to the best student judge.

Awards and comments on the classes follow:

Barred Plymouth Rocks.

Monster class of four hundred thirty-eight birds. Too many classes and prizes. Looks like a pigeon show with ribbons too numerous to mention. Eleven firsts, as many seconds, and so on up to seventh prize. Seventy-three prizes actually awarded on Barred Rocks. Seventeen pen prizes, putting 85 birds under pen ribbons. This Light and Dark classification is confusion worse confounded.

Fred Cook of Massachusetts, engaged to judge, failed to appear. Walter Young judged cockerel-bred; George Greenwood, pullet bred. This infusion of new blood in Barred Rock ranks helps. Young placed first on young Dark pen that was headed by real chicken; strong head; good type; finished tail. Greenwood picked out likely bird in first pullet-bred cock. So far—so good.

J. C. Johnson handled Standard Exhibition (Continued on page 89)

Coliseum Building, Chicago, in which the great Mid-West Poultry Show is held. It was here that Warren G. Harding was nominated for the Presidency.

Editorial

ON January First the earth starts on another revolution around the sun. The period of three hundred and sixty-five days, which will be required to complete the cycle, is called a year.

We number the years. They are man's measure of time. The new year that now dawns is known as the nineteen hundred and twenty-second.

Of course, more than one thousand, nine hundred and twenty-odd revolutions have been made by the earth since this old world was swung into space and first began her movements in the heavenly harmony of planets. Geologists, studying the bygone ages of the earth, draw on the bank of time and speak of sixty millions of years.

Nor does Nineteen Twenty-two represent the centuries that man has walked upon the earth. Not that, for did not David, King of Israel, live three thousand years ago? And language was then so far advanced that he became and still remains the greatest poet of the Hebrew tongue.

How comes it then that we shall use the little numeral, 1922, to date our letters and record the events of our lives, since it indicates neither the number of years since time began, nor yet the years of man's recorded history?

There was in the course of divine providence an occurrence in human history that over-whelmed time. In a far country, bordering the eastern shore of the Mediterranean, nineteen hundred and twenty-two years ago, A Man was born. It is from His birth that we date our monuments and chronicle the achievements of the human race.

His life marks the turning point of history. In counting time before Him, the years are numbered backward. Since Him, time is counted forward. With January 1, we begin to write 1922, A. D. That is to say, the nineteen hundred and twenty-second year of our Lord.

The Man of Nazareth brought a new dispensation to the world. He taught love of fellow man and peace in the hearts of men. Preaching to the multitudes, He said: "Blessed are the peace makers."

In saying this He referred not merely to the peaceful settlement of quarrels, but to that fundamental attitude of life which breeds peace on earth and good will toward men.

"Blessed are the peace makers." In other words, men should make peace; and mankind should learn that it is our job, not the Almighty's, to make this world a peaceful, decent, equitable and honest place in which to live.

The earth is given to man, all the resources that are in it, all that grows out of its soil. It is man's kingdom, and if it is to be a peaceful, happy, prosperous kingdom, there must be peace and good will in the hearts of its people.

"Where can I find peace—just a little quietness and contentment—in the crushing industrialism of modern life?" Ten thousand backyard breeders of purebred poultry answer, "In the intelligent pursuit of breeding and rearing, even in a small way, of one of the wonderful races of domesticated fowls."

And, beyond them, in the country, where the air is not polluted, are thousands more whose poultry is their livelihood. They own their occupation and direct their own work, achieving results for which they can enjoy the full credit. Theirs is the security, satisfaction and contentment that comes from peaceful and honorable enterprise. The rewards in this world's goods are not as great some years as others, but always, if the land is adequate, there is a self-sustaining farm business, a place of occupation and a home.

Nineteen Twenty-two promises to be a bright year for all those engaged in poultry culture. Our wish is that every promise may be fulfilled for you and yours.

A Time for Optimism

Among many letters received during the past few weeks, the following, from a subscriber in Illinois, is selected for reproduction herewith:

"No doubt you have forgotten me and the poultry meetings in Clark county a few years ago. But I have not let slip a few of the things you told us about poultry at those meetings. I am more interested in poultry now than I was then and would enjoy and appreciate your talk more now. Any one who would talk poultry here now would certainly have a very receptive bunch of listeners, for interest in poultry in this county is very much alive. It always has been, in fact, but is much more so at this time.

"After your last talk at Martinsville, in which you commended Mr. Hull's small flock of R. I. Reds, I bought a few eggs from him and made a start in purebred poultry; a very humble one, indeed, but I made the start just the same. The next year I bought a 275 egg incubator, and first set it with eggs from the Reds, and twice afterwards with White Leghorns. At present we have a nice little flock of Reds and 250 very nice Leghorn pullets. Just recently completed a duplicate of the New Jersey multiple unit house, 20 by 40, which we think the finest poultry house in the county. Of course we completed the performance by subscribing to the American Poultry Journal.

"Now then I would like to ask of you a little fatherly advice about going in the poultry business a little heavier. I find the work fascinating and profitable. And best of all, the children enjoy helping, and are as much interested as myself or wife. We have good success raising the chicks in home-made gas brooders in fairly large numbers, and feel confident in trying to turn out a couple of thousand next year. At present we have two incubators and are thinking of either buying another one of about 400 egg capacity or selling these two, and installing a mammoth. The wife wants to continue with the two machines for another year, but I believe it would pay to put in a mammoth and do a little custom hatching, and make a start in the baby chick business. Can arrange with a few other breeders for the necessary egg supply beyond our own production, at 20 cents above home market for selected eggs.

"If you have time to give this proposition a turn over in your mind and advise me a safe procedure, I will be very thankful to you."

It was with some hesitancy that we decided to print this letter entire, wondering if our personal interest in the letter, its writer, and his problem was outweighing our judgment of selection. Concluding that such a letter of human interest represents the thoughts and ambitions of many readers, bringing up, as it does, vital personal issues of, "What shall I, too, do," and "What does the future hold in store for me," we yield to the opportunity to discuss the matter on these pages at this time.

To begin with, B. H. Emrich, the author of this letter, owns an eighty acre farm in Clark county, Illinois, is a breeder of purebred swine, and is vice-president of the farm bureau of his county. He is a progressive farmer; yet, progressive farmers of old made advancement in their crops and live stock, while poultry remained in a subordinate place. The reason why the farmer's view-point is changing, and why he is now seeing new possibilities in his chickens, is made clear in this recent press item:

"Nashua, Ia.—Farming is a queer business, mused Henry Maloy, as he jostled along on a lumber wagon on his way home from market. He had just sold a load of corn and a crate of chickens. The load of corn brought \$14.04. The crate of chickens, 22 in all, brought him \$15.66, or \$1.62 more than his load of corn. Maloy doesn't know what to think about his farm business, when a single crate of chickens brings more than a full load of corn."

It is in the natural order of events that the corn grower should return home with a greater willingness to put in a floor in the hen house, put in new window sash, hatch his chickens earlier and give them better care. He will be glad to feed more of his grain to his fowls, for the most profitable way in which he can market his corn is as poultry meat.

Before the farmer, however, goes very far in actually expanding his poultry operations, investing materially in equipment and improved stock, he first asks how permanent is the economic structure that underlies the present poultry situation. Many men, like Mr. Emrich, recognize the practical hatching value of the incubator, and they also recognize their natural ability to rear chickens and produce poultry and eggs, but they want "a little fatherly advice about going into the poultry business a little heavier."

Let us, therefore, take the time and the space to look into the general economic situation. Indications are that grain will be low in price for some years to come. The mill feed market may be more or less erratic, as of late when the price of bran jumped from \$11 a ton to \$25 a ton. Basic grains on the farms, however, are down in price. America produces more grain than is required for home consumption, making a surplus of

cereals that should go for export. But, the currencies of foreign nations are so depreciated that they cannot buy heavily in the United States. A German mark, for instance, worth normally 24 cents, is today worth a half cent. If Europe must buy cereals to maintain its population, it can buy to better advantage in Canada, or Argentina, or Australia, where the currencies are also depreciated below the American dollar. American farmers will continue to grow grain, that is their business, and indications are that prices will continue low.

Will not cheap grain give rise to heavier farm egg and farm poultry production? We look for a heavy flow of farm eggs this spring, and only moderate prices for same. When the best fresh eggs were returning to producers 98 cents on the New York market, Nov. 12, 1921, the best grade of cold storage eggs were wholesaling in carload lots, New York, at 39 cents. Buyers will in all likelihood, put away the farm eggs in the spring of 1922, so that they can wholesale them at as low or lower price next fall and winter.

The consuming public is plainly becoming more discriminating in the matter of egg quality and is demonstrating an increasing capacity to absorb fresh eggs at high prices, as witness the gap between storage egg and fresh egg prices during the past few months. City people are standardizing their breakfasts to fruit, cereal, toast, medium boiled fresh eggs and coffee. Steak and fried potatoes for breakfast are a thing of the past. In the matter of poultry meat: prohibition is one of the factors that is responsible for a great change, and city consumers are eating more chickens, more chicken sandwiches, more chicken salad, more chicken Newburg. The consumption of chicken, as a staple food in common diet, is plainly increasing. This is in line with the agriculture of the older countries of Europe, reflected in the fact that meat animals have failed to increase in numbers with the increase of human population, while poultry and dairy cows have continued to increase in numbers.

American farmers look to the hog to bring back prosperity to American agriculture. In comparison with poultry the fact is this: the top price for swine in Chicago, Dec. 15, was 7½ cents a lb., while at the same time heavy live chickens were 23½ cents a lb. These prices are what producers received. It takes about 5 lbs. of feed to make 1 lb. of meat, regardless of the kind of animal fed, that is, about 25 lbs. of feed to produce a 5 lb. roasting chicken, and about 500 lbs. of feed to produce 100 lbs. of hog. On this basis of feed consumed, poultry is the most profitable stock on the farm. The top price for cattle, Chicago, Dec. 15, was 11¼ cents, and for sheep, 11 cents a lb. Compare to 23½ cents for chickens, and the prevailing interest in poultry is explained.

It is this condition that explains the statements in the following letter from E. H. Walworth, farm agent for Clark county:

If it had not been for the poultry and egg business in this county during the last year I do not know where many farmers would have made their living. There is quite a good deal of livestock shipped out of this county but the poultry and egg business brings in a larger revenue than any other single kind of livestock or of any crop.

At Martinsville there is a local company which has a small cold storage space for dressed poultry but it does a great deal of shipping business besides, shipping to the eastern markets. From reports, this company, together with a large grocery store, ships out of Martinsville \$300,000 to \$350,000 worth of poultry and eggs in a year. I have not been able to get the exact amount but I think this is very conservative.

This poultry comes largely from rather small farms averaging around 200 hens and practically every farmer has from 125 to 200. I know quite a few farms which run over 200 but at present there are no real large plants. The largest that I know run around 600 or 700 hens. This would indicate that the receipts which are received are pretty well distributed.

There is a tendency on the part of a few to begin to specialize and I should not be surprised within two or three years to see at least a few plants of over a thousand birds.

Mr. Emrich wants to own one of these larger plant; not an exclusive commercial poultry farm, but a large plant on his 80-acre general farm for the conversion of home-grown feed, into profitable poultry products.

The average farmer can utilize his cheap grain in carrying his poultry operations only to a certain point. There a limiting

factor is encountered. He stops, because, first of all, he lacks the incubating and brooding equipment to produce early hatched stock, without which all operations are in vain.

Incubating capacity is indispensable to poultry progress, and the incubating capacity in this country is infinitely too small. A single mammoth incubator in such a county as Clark, Ill., would be a pigmy, for there were grown 381,972 chickens according to the 1920 census, and there were produced 1,632,644 dozens of eggs in the year. Farmers of Clark county should take thousands upon thousands of eggs to a hatchery to have them turned into early chicks.

The development of large brooder stoves, that fit into colony houses, have made it possible for farmers to have their eggs hatched for them and grow large flocks of early chickens, all of even age, requiring similar care and attention.

Whether Mr. Emrich installs more individual machines now, or installs a mammoth at this time, is a matter of personal preference. Individual machines will not depreciate much in value and the business is not going to fade away. As regards the sale of baby chicks, that business is better when adjacent to a large town or city, where many back lotters buy their chicks; but when it comes to hatching eggs for the countryside, there is a big opportunity in every county seat, trading center and poultry community.

Colony brooders on the farms must go hand in hand with the hatcheries. And they will, for farmers are not going to pass up the winter market for well grown chickens and eggs from early hatched pullets. It is in that direction that their greatest profits lie, and the poultry raiser who passes the opportunity to put himself in the preferred class, through the use of hatching and brooding equipment, is going to lose out. Backward poultry operations will be a big handicap this year, and a heavier handicap next year.

A little modern poultry practice is a growing necessity. Poultry keeping is becoming more and more of a business. The farmer or back lotter who will intelligently and adequately care for poultry will find that they are one of the most profitable things to which he can now turn his attention.

We published in the December issue of the Journal a report of 30 cents profit per laying female for the month of January, 1921. A reader, with whose flock we are personally familiar, remarked that his backyard flock of 67 hens and pullets had produced 34 eggs a day during November, which he had sold at 75 cents a dozen.

An income of \$2.15 from a backyard, spare-time flock of purebred Leghorns! That used to be a day's wages.

He remarked about the report of 30 cents profit for a month. Then he set forth what a pen of 17 of his hens did in November. They laid 310 eggs during the month, which sold for \$19.50. They ate 45 lbs. of grain and 75 lbs. of mash, at a total cost of \$3.20. To this should be added 30 cents for oyster shell, grit and charcoal; 48 cents for electric lights; 50 cents for oats to be sprouted into green food, a total feeding bill for the month of \$4.48.

This left a profit on the 17 hens during November, of \$15.02; about 90 cents per bird. We used to hear of the "dollar hen," meaning a hen that returned \$1 of profit in the course of a year. Here are hens that returned nearly that much in a single month. December will probably be as remunerative, for this poultry keeper received 80 cents a dozen in December, against 75 cents in November. However, all months are not profitable. These 17 hens molted early, in August and September, and were a loss equal to their feed cost during that time.

In remarking on his success, this poultry keeper said: "Every single day there are certain things that I must do. My flock demands unremitting attention to details. Of course, the flock is right physically, and along this line it should be hammered home that no success can be attained unless you get the chicks out early, have them from good breeding stock, and then full feed them from the start throughout the growing season."

Such is our message to those who are looking to poultry, and plan to do something with it along modern lines this year.

Whom None Can Thank

DeWitt C. Wing, brilliant editorial writer on the Breeders' Gazette, has spoken of the breeders of purebred livestock as "contributors to the glory of agriculture and purveyors to the welfare of humanity."

That is a fine text for this editorial, in which we wish to speak of the miracles wrought in modeling our breeds of poultry, and the service that the breeders render in disseminating their fine breeding stock throughout the country.

We are prompted to write on this subject by an instance at the Chicago Coliseum poultry show. Campbell's Soup Farm, a thousand acre ranch in New Jersey, backed by a million dollar corporation, exhibited a magnificent team of Buff Orpingtons, but for what purpose we are unable to understand. They do not sell birds; Mr. Hobbs, well known and successful poultryman for the farm, informing us, in reply to the question of what he did with his \$50 and \$75 cockerels, that the farm ate them.

That is a new view point in the west, the eating of seed stock that should be used to improve existing flocks of poultry. It is a new view point in the west, where the food of the nation is produced, and the purebred breeder clearly sees the relation that he bears to agriculture. A new view point, indeed, and a strange one, to find a man of wealth breeding solely to gratify his own desires, ambitions and fancies, with no thought that he owes something to the breed and to a

vast army of fellow breeders of that breed.

A man who does not share his success in breeding, is a man whom none can thank. What a blank life! What a perversity of the whole program of improved breeding in live stock and poultry!

What would the world think of a man who pedigree-bred wheat so that his straw was long and stiff and did not break readily before the wind; so that the wheat berry was large and heavy; so that, all told, his wheat yielded ten bushels more grain to the acre than any other wheat; and what would the world say of this great improver of wheat if he kept the seed to himself, on his own fields, and did not disseminate it to the benefit of his neighbor farmers and the betterment of agriculture as a whole?

Fortunately the Rockefeller wealth is not being used for the selfish purpose of flowering its owner's vanity. Everybody knows that it is being used to fight ignorance, arrest and destroy disease, benefit humanity. But what would you say if John D. Rockefeller should engage the services of Luther Burbank as private horticulturist, to grow seedless oranges only on his estate at Tarrytown, to make white blackberry plants only for his exclusive enjoyment, so that he could show his friends the superior wonders of his private garden? If such a thing were done, you would say that old John D. was a most selfish man, for he had perverted the genius of a great plant breeder; a genius that belonged

to the world and not to a private individual.

During the past two or three generations in which our modern breeds of poultry have been made and improved, there has been equally great progress in other directions. There have been wonderful inventions and marvelous achievements in the mechanical world during this time. Today we have the wireless telegraph, the trolley car, the telephone, the electric light, the automobile. The glory of each is that it has been used to benefit humanity. Neither inventors nor monarchs, not even the kings of backward lands, contrive to monopolize the fruits of progress. We, each of us, may enjoy the contributions of those great and good men who have done things in this world, whether they worked in improving living organisms that move and have their being, or whether, leaving the field of flesh and blood, they worked with mechanical contrivances that were born of the material resources of the earth.

There is another aspect of this matter. The uses to which a breed is put influences its type. If an independent breeder removes himself from contact with the poultry industry as a whole; if he drinks all the water that flows from his spring, instead of letting it run down the mountain side, crystal clear and sparkling fresh, to quench the thirst of laborers in the vineyard below, the ideals to which he breeds may become perverted.

England provides a tragic example of a nation's poultry breeders losing

Regal White Wyandotte Book

Have you had a copy?

THIS is, without a doubt, the most complete book ever published dealing wholly with the White Wyandotte. It is full of illustrations from life and its pages deal with a variety of subjects including chapters on origin, description, feeding, care of breeding stock, fertility, color characteristics, raising young chicks, washing and fitting for exhibition, poultry diseases, mating and breeding, description of Wyandotte type. The frontispiece is a beautiful colored reproduction of my first prize pen at Boston.

My object in issuing this book is to bring to the attention of every White Wyandotte breeder, the Regal Dorcas strain which leads the world, not only in the show rooms but also in the laying contests. For 16 years at the New York State Fair, the Regals have defeated all competition, while my winnings at Madison Square Garden, Boston and Kansas City have never been approached. If you wish to know more about these famous birds, send one dime for a copy of the Regal White Wyandotte Book. The information it contains will be worth many dollars to you.

5000 Cocks, Hens, Cockerels and Pullets For Sale

This season I have the finest flock of White Wyandottes I ever owned. However, the demand is very heavy and orders should be placed as early as possible.

contact with the ultimate end for which fowls are kept, with the result that many extremes were developed, such as abnormal, pendulous faces in Spanish and ungainly length of leg in exhibition games. What is there in the few surviving members of the exhibition game? Those poor weaklings of an old aristocracy tell the story of a wrong view point. The exhibition game cock, standing on the dunghill of a decadent breed, tells us of breeders whose end was vain pomp and empty laurels, not service; whose standard was the aesthetic fashion of the distorted hour, not the usefulness that could be preserved in the breed and augmented; whose purpose in breeding was to get enough eggs out of their females to reproduce their flocks, and beat their competitors, the public welfare go hang.

Friends, that is selfishness. And selfishness dies, for it has no living force. No one has said this better than Victor Hugo, whose language graces the history of French literature, in the following words: "For the world lets everything die which is nothing but selfishness; every thing which does not represent an idea or a benefit for the human race."

Breeds die, and breeders may last to the end of their natural life, yet during this time they can never fully live, if they are incapable of rendering service to the poultry world. Breeds should be built for service, and breeders should realize that they can only discharge their responsibility through service. We do not plead for sales and advertisements. Campbell's Soup Farm, being wealthy, could give away their surplus birds for the improvement of the breed, and to the glory of the Buff Orpington. Poorer men have done this much. Belgium could give the world the Silver Campine because a poorly paid station agent at Turnhout, Belgium, loved his native breed, bred it with all the ability he had, and gave his surplus males, and often some of his best females, to the poor peasants in the rural sections to improve their stock.

This editorial is not written because the breeder discussed does not advertise. It is the view point of private breeding on the part of a great breeding establishment that we submit to the consideration of our readers. And we are interested in the matter for the reason that we are heartily desirous of seeing purebred poultrymen link their breeding operations with the enduring poultry husbandry of American agriculture. The blood of our great strains of Standard exhibition poultry should flow as rivulets to increase the size, improve the stamina, develop the substance, and beautify the color and plumage of that vast sea of mediocre flocks, raising the quality of poultry in America to higher levels.

When this view point of service, rather than desire of selfish attainment, permeates the poultry fancy, we will have a bigger and better industry. Then will all Barred Rock men say that they must have a chicken first, and they will not tolerate a slow feathering bird to win at the great Chicago show. Then will there be more farmer buyers, like the one who came into the Coliseum and paid L. J. Dem-

Breeding Standardbred poultry must not be a little game that runs around in a vain and foolish circle among ultra-fanciers, a game in which the five million farm poultry keepers of America have no valid reason to participate, a game in which the great utility breed of Barred Plymouth Rocks is shown by childish minded amateurs who bring into the show chick-feathered cockerels and pullets. Let us not look upon creation as a vain glory in which the sun rises to hear us crow. In the words of Wing, let us "contribute to the glory of agriculture and purvey to the welfare of humanity." Any other end is unworthy of us, who are only trustees for a little while of the breeds which we inherited from those great breeders who preceded us. The works of their creations belong to the poultry world; it is for us, in so far as we are able, to improve upon those works, and give them wider distribution.

Standardizing New Varieties.

The desire to originate new varieties shows no signs of abating.

In looking over the year book of the Blue Andalusian club of America, we note that A. H. Lewis, New York, is at work creating a golden laced Andalusian; that Walter J. Coates, Vermont, has "nearly perfected" a partridge Andalusian also; a salmon-breasted blue Andalusian; and that Voris Morrison, secretary of the Blue Andalusian club, advocates "trying to get the Andalusians divided into light and dark classes like the Brown Leghorn," to "give the fancier more classes to show in in the show room." On top of this, Mr. Morrison is "also in favor of trying to get the black Andalusian admitted to the Standard."

"Why shouldn't it be?" asks Mr. Morrison. "Just think of the value it would be to breeders. They could have more Standardbred birds. We could sure have some classes of birds at the shows if we had light, dark and black Andalusians."

In England, the same effort to make, exhibit and exploit new varieties is evident. The English developed four good varieties of Sussex, the Red, Light, Speckled and Brown Sussex, and a Standard of points for Sussex was adopted and agreed upon. The breed has rapidly come forward in popular favor, and now new originators appear, with new varieties, to trade on the established breed name. During the past few months so-called Buff Sussex, Black Sussex and Grey Sussex have been advertised in England, and we are informed that "one of these was even exhibited at the World's Poultry Congress at The Hague." At the recent Kansas City show we have the spectacle of Black Sussex on exhibition.

The attitude of men whose prominence of position in the purebred industry has given weight and authority to their opinions, has been favorable to the making of more and more new breeds. Poultry shows have catered to novelties, and the A. P. A. has been nearly as receptive. But, we are beginning to wonder if the time has not

Have You Learned to Typewrite Yet?

Universal typing is *here*. People are abandoning the slow, tiring task of long-hand writing. How long are *you* going to cling to it, in this world of advancement? Everybody dislikes to receive long-hand letters. And everyone shirks at correspondence when it has to be done the old-fashioned, tiring way. So join the progressive throng—get a typewriter NOW.

Free Trial

We ship the Oliver for five days' free trial. Let it sell itself. Or send it back.

14 Months To Pay

Pay for this Oliver while you use it. Only \$4 per month and you soon own it.

\$49.50 or \$100? Which would you rather pay for a standard typewriter?

For 25 years all standard typewriters have been priced at \$100 or over and still are—except the Oliver.

It is the only standard typewriter selling at half. It is the only standard, \$100 typewriter being marketed direct from the factory.

Were it not for this simplified selling plan, the price of the Oliver would also be \$100 or over. For it is the same fine machine, the finest model we have ever built. Over 900,000 have been sold.

We simply sell the identical \$100 Oliver direct from the factory, and subtract all the extravagances of complicated selling. We have found that it is needless to maintain a high army of salesmen and agents. We have found it unnecessary to sustain a costly chain of branch offices in over 50 cities.

The \$50.50 you save is the sum that it would cost us to sell the Oliver the roundabout way. Plus a saving made because of the volume of business created by our plan.

Send No Money

We let the Oliver sell itself. We ship it to you for free trial. Then you can compare it with other standard typewriters at \$100 or over.

You become your own salesman. You are the sole judge. No anxious solicitor will urge you. In the privacy of your own office or home you can decide for or against the Oliver.

If you want to own it, send us \$49.50 cash. Or if you wish to pay for it in installments, send us \$3 after the trial period, then \$4 per month until \$55 is paid.

You can readily appreciate that it takes a super-typewriter to sell itself.

No test could be severer. Remember, there need be no fluent salesman to urge you.

If you decide against the Oliver, ship it back at our expense. We even refund the outgoing transportation charges, so that you do not risk one cent in the test.

Now we ask you, would you rather pay \$50.50 additional and not get a finer typewriter? Would you care to support a \$100 price for the Oliver, and get nothing tangible in return?

Or don't you agree that our new way of selling is logical? Doesn't it appeal to your common sense?

How to Save

The coupon below brings you EITHER a Free Trial Oliver or Further Information. Check which you desire.

This is all you have to do to save the \$50.50. Without such a plan, you'd have to pay \$100 or over.

But this way you not only save—you get the finest typewriter that can be built by a leading maker. It comes fresh from the factory, our latest and best model, a 25-year development.

Check the coupon *now* and mail it in. Canadian Price \$79.

Breeding Cocks and Cockerels, \$8, \$10, \$15 and \$25 each. Breeding Hens and Pullets, \$8, \$10, \$15 and \$25 each. Breeding Pens (1 male and 4 females), \$25, \$40 and \$60.

SPECIAL—110 Yearling Cocks from my eight best pens of 1920. Prices, \$8.00, \$15.00, \$25.00; \$35.00 and \$50.00.

Let us have your order now for Show Birds or breeders with the most careful of breeding for your foundation stock or new blood for 1922 pens. Send for my 44 page Art Catalog of THE WORLD'S GREATEST STRAIN OF WHITE WYANDOTTES. Please state wants plainly.

EGGS EGGS EGGS EGGS EGGS EGGS

The pens to produce the 1922-1923 winners mated January 1. I am in a position to furnish you eggs from the 24 best matings of White Wyandottes in America for 1922. All of the very best birds reared the past three years are in these pens. My 1922 illustrated, instructive, art catalog of America's finest White Wyandottes, describing these matings is waiting for you, and your wisest act before buying stock or eggs for hatching is to send for my catalog.

QUALITY EGGS—\$5.00 per 15, \$9.50 per 30, \$14.00 per 50. \$25.00 per 100. A limited number will be spared from the most special matings at \$8.00, \$10.00 and \$15.00 per 15.

Chas. V. Keeler & Son

R. F. D. 11 Winamac, Ind.

come to stop inventing. We know that every manufacturer reaches the point where he has to stop tinkering with his designs and dies, standardize his product and begin to sell it. Is not the big job before the purebred breeders of America the job of more closely linking up their purebred birds with the poultry industry of the nation? Is not the big job before them acquainting the poultry raisers of the nation with the merits of the established breeds, rather than following the lead of pigeon fanciers whose range of breeds is so wide that no man knoweth the exact number of different kinds of pigeons?

The following letter from a subscriber in New York, impresses us that the time has not come to multiply the varieties of Andalusians, rather that much propaganda work remains to be done in behalf of the Blue Andalusians:

"Wish some time in the near future you would write an article for the Poultry Journal about 'Blue Andalusians.' Was out in the country and saw three pullets and a cockerel of this breed. The lady could not give me any information as her husband was in the city, only that the setting of eggs came from Massachusetts. Must be a new breed as I see only one ad in the Journal and that is from Illinois. Any information concerning the breed will be gladly received in regards to the origin, laying capacity and weight."

Here is a reader who has been attracted to Blue Andalusians and now seeks information on the subject. When this interested party attends a poultry show, are you going to cloud the variety by premiums on dark blue, light blue and black Andalusians?

Light blue and dark blue Andalusians are not distinct varieties. H. Platt, one of the oldest breeders in England, writes:

"Generally, two contrasting shades of blue are mated—a rather dark male to females on the lighter side, or a bright blue male to rather darker females."

"If birds are mated which are of a light blue ground the progeny will probably be too light, and be what is termed washy. Mixing the color is one of the chief studies of an artist, and with Andalusians, blending the shades of blue to produce the tip-top exhibition specimen is the chief problem."

Thus we note a breeder of international reputation counseling the young breeder to study the blending of shades of color, and setting forth as plainly as words can set forth, the futility of attempting to mate together birds of light blue ground color.

Yet for the sake of more prize ribbons, light blue and dark blue Andalusians are suggested.

Are we to also hear of requests for separate classes for light Buff Plymouth Rocks and dark Buff Plymouth Rocks; mahogany Partridge Wyandottes and cherry red Partridge Wyandottes; bright Rhode Island Reds and chocolate Rhode Island Reds?

The suggestion to establish Black Andalusians as a Standard variety is unique because of the fact that black Andalusians persistently come as sports from Blue Andalusian matings. If these black sports are to be bred together and a black variety established, the variety will have to exceed in popularity the Blue Andalusian variety if it is to provide an outlet for its own progeny as well as all the black sports of the Blue variety. The suggestion may be dismissed as absurd, first because a Black Andalusian would be classed as an inferior Black

OVIE'S POULTRY FARM & HATCHERY

99 State Street

Marion, Indiana

BIG, STRONG AND MUSKY

Guaranteed to Raise Better Chicks, Stronger Chicks and a Higher Percentage of Chicks than Any Other Brooding Device Made

Back of this statement is 12 years of time to prove it. Back of this statement is over 100,000 International Sanitary Hovers in use to prove it.

For 12 successive years the International Sanitary Hover has made a record in chick raising results that is unparalleled by any hover or brooding device made, or by the mother hen itself. The International Sanitary Hover has made the same wonderful record whether it has been used on a home poultry yard raising a few hundred chicks, or on a commercial poultry farm raising thousands.

Read These Statements

"Enclosed please find a picture of a small building, with the International Sanitary Hover, in which I raised 109 chicks this year. My chicks were hatched March 23, and after putting them under the hover I never lost a chick. This, I think, is as nearly perfect as any hover can be."—Mrs. D. H. Mittees, Hurleyville, N. Y.

"I now have amongst my brooding equipment an International Sanitary Hover which I purchased from one of your dealers over seven years ago. It is still doing just as good work as when new, and I use it for brooding my most valued chicks."—Chas. Key Cullom, St. Louis, Mo.

The International Sanitary Hover is built on entirely different principles and accomplishes entirely different results from the ordinary hover. These principles are patented and are exclusive features found only in the International.

Fresh Air Without Draft

In ordinary hovers more chicks die in the night hours from bad ventilation and foul air than any other cause. The International prevents this by its canvas curtain construction, which is porous,

and permits a constant supply of fresh air without the slightest draft. This construction is possible only in the International, because it is the only hover whose heating unit is entirely walled away from the hovering area.

Warmest at the Curtain

The International is the only hover of which it can be said that it is warmest at the curtain. There is no direct heat whatever, but the heated air is circulated, heating the outer edges first, and warmest. It is warmer at the curtain than in the center, yet the temperature of the entire area does not vary by 5 degrees. The heat is radiated downward from above. Hence there is no leg weakness due to ground warmth. In fact, all chick losses due to foul air, poor ventilation, drafts, vermin, over-heating, gas fumes, or any of the other causes that you experience with an ordinary hover, are entirely absent in the International.

It can be said as an absolute fact, that you can raise every chick in an International Sanitary Hover that is hatched with enough strength to reach maturity. This record of chick raising has no equal.

Other Advantages

The International is complete in itself, weighs 18 pounds, and can be set anywhere or carried anywhere as easily as a basket. The entire heating unit lifts out by a handle from the top, for filling or cleaning—no stooping over to get it. A peephole on top shows you the condition of the lamp. You can pick out the thermometer from the top and know exactly what the temperature is at the chick's level.

Profit or Loss

on a season's shipping may easily hinge upon the shipping supplies used. Shipping losses are almost unknown when PREMIER brand products are employed for shipping chicks, eggs or mature fowl. They carry the unqualified indorsement of all leading poultry experts as well as the U. S. Gov't Farms, Am. Poultry School and numerous State Colleges. In price they are little if any higher than others. Shipment is direct from mammoth factories and genuine satisfaction is positively guaranteed in every instance.

Premier Chick Boxes are made of three-ply cellular extra test corrugated paper board and transport chicks without loss or impairment in vitality. Use these perfect boxes this season and note the increase in satisfied customers. Prices on single dozen lots f. o. b. cars at Omaha, are as follows:

- 25 Chick Size, Wgt. 11 lbs \$1.45
 - 50 Chick Size, Wgt. 20 lbs. \$2.20
 - 100 Chick Size, Wgt. 32 lbs. \$3.10
- Liberal discount on orders over \$10.00.*

Premier Egg Boxes are the same as the chick boxes we have been selling for more than ten years. Single dozen prices follow:

- 15 Egg Size, Wgt. 14 lbs. \$1.85
- 30 Egg Size, Wgt. 21 lbs. \$2.40
- 50 Egg Size, Wgt. 32 lbs. \$3.35
- 100 Egg Size, Wgt. 53 lbs. \$5.60
- 12 Duck Eggs, Wgt. 15 lbs. \$2.00

Liberal discount on orders over \$10.00.

The discount allowed on shipments weighing 100 pounds or over will cover the freight to nearly all points from the Rockies to the Atlantic. Order now for shipment up to February 1st. Pay on arrival of the goods. Send for complete price list covering egg shipping baskets, coops, etc.

O. W. BINDER

Box A Fort Wayne, Indiana, U. S. A.

Minorca; second, because a black subsidiary variety promoted merely to absorb the black sports of the Blue Andalusian would lack that purity of breeding which is indispensable to the production of purebred stock of the first class.

Yet, the public is asked to consider a black Andalusian, while grand old breeds await new breeders; breeds that are made, are pure, are dependable. What is the matter with the Black Langshan, the Black Java, the Black Orpington, the Black Minorca, the Black Spanish, the Black Leghorn, the Black Polish, the Black Hamburg, the Rose Comb Black bantam? These nine breeds cover the field from small to large, and they offer the breeders of this country a selection in matters of type, temperament, meat and eggs. The youngest of these varieties has forty years, and the oldest more than a century, of selective breeding back of it.

The Standard committee should not deal lightly with this ever recurring question of admitting a new variety. It has been stated that neither the Standard Revision Committee nor the American Poultry Association can do other than admit a new variety once it has qualified for admission by meeting the requirements, as follows:

- (1) It has been given a name.
- (2) An historical and educational chapter on origin has been prepared.
- (3) It produces at least 50 per cent of specimens reasonably true to type and color.
- (4) It has been exhibited at one official show for two years.
- (5) A Standard for the breed has been prepared.

These requirements offer a basis on which a breed or variety may qualify for admission to the Standard, but whether the vote stands to admit a breed or variety should depend on a well determined policy regarding recognition of new varieties and multiplication without end. The fact that a variety meets the five requirements set forth above does not assure its admission to the Standard, for that part of the constitution which covers the admission of new breeds and varieties specifies that they may be recognized as Standard by a majority vote of the A. P. A., provided the requirements are complied with, and that the Standard committee shall recommend the breed or variety "as being entitled to recognition by reason of distinctive breed or variety characteristics and general merit."

No "Production Classes" Wanted.

At a zone meeting of the American Poultry Association, held during the Newark, N. J., show, November 29, 1921, at which President Rigg presided, and at which some of the best breeders in the East were in attendance, the following resolution was adopted:

"That the American Standard of Perfection shall remain as it has always been, and is now, the sole guide for judging Standardbred fowls at our poultry shows, and that no additions or alterations of any kind shall be made which conflict with the descriptions already contained therein."

It was moved at this meeting, by Frank De Lancey, that Thos. F. Rigg be endorsed to succeed himself as President of the A. P. A. The resolution carried the pledge of united support for re-election from the breeders of New York, Pennsylvania, New Jersey, Delaware and Maryland.

THERMOMETERS NEVER VARY

CURRENT NOTES AND COMMENT

Joint Leghorn Meeting.

With 569 Leghorns cooped in competition at the Chicago Coliseum show, there was not only a great deal of interest in the breed, but a number of prominent breeders took part in the show. A joint meeting of all the Leghorn clubs was called.

The breeders present went on record as opposed to production classes, on the ground that the Standard exhibition class should represent all that is good and useful in the breed. It was pointed out that as soon as "utility" and "fancy" classes are provided in a show, there is a conflict of interests.

A resolution was passed opposing the exploitation of privately made egg records, until such time as the Canadian system of government inspection is inaugurated in this country, whereby a government official visits the plant at unannounced intervals and checks up the birds and trap nest records. "Home grown" egg records are getting to be a joke.

It was agreed that the clubs should present a solid front in their requests to the Standard Revision Committee, so that the breeders of all varieties of Leghorns would sponsor the same general breed text.

* * *

The Buy-Back Policy.

Here and there, now and then, one still sees the announcement of the man who wants to put you in the rabbit or guinea pig business "and buy all you raise."

If the breeding of any class of stock is to ever amount to anything it must be lifted out of the hands of those who make unwarrantable pretenses of sound business.

To "buy all you raise" is an unsound method. Increase in numbers of animals raised sooner or later loads the buyer to the point of saturation.

A live stock industry that rests on a basis of quality, where the young breeder buys on a quality basis and sells on the same basis, is a permanent and enduring industry. That the rabbit men ignore this fact, and play the "rabbit game," accounts for the fact that every time the rabbit goes ahead three jumps it falls back six. At this rate, how long will it take the rabbit to jump out of the well?

* * *

Worthy of Comment.

Paul P. Ives, judge and breeder, of Connecticut, writes in regard to the forthcoming state poultry show to be held in Hartford in January 24 to 26:

"By a vote of the executive committee, the Connecticut Poultry Association will co-operate with the State Board of Agriculture and other state agricultural organizations, and will stage the Connecticut State Poultry Show as a part and at the time of the Farmers' Week and Big Winter Fair."

Mr. Ives further states that 17,000 people visited the show last year, and that special rates are secured from the hotels for visiting poultrymen.

To read such a letter makes a poultryman proud. Why not? The hotels of the capital city of a rich eastern state welcome the breeders of improved poultry. The public appreciates the value of exhibition poultry as showing the perfection to which the breeders work may attain, and 17,000 people visited the show last year.

The management of the exhibition shows a commendable breadth of vision by linking up with the agricultural interests of the state. That lifts the poultry show above the realms of a small clique, who trade among themselves. It secures contact with the world of agriculture.

Purebred poultry breeding is assuming a most progressive attitude in the East. In New Jersey at the recent Newark show, over 4,000 specimens were cooped. At the banquet

Insure Success with the

SUCCESSFUL poultry raising brings big profits, but good profits are obtained only when waste in hatching and high mortality in brooding are avoided. Eggs cost money; dead chicks are worthless.

Successful poultry raisers in all parts of the world avoid unnecessary losses by the use of Buckeye Poultry Raising Equipment. The experience of over a million breeders has proven beyond question the reliability and economy of these time-tested incubators and brooders.

Proven in Use

Buckeye Incubators are the last word in effective hatching machines. More than thirty years of experience and research have developed them to the highest point of efficiency. Without frills, every part of a Buckeye Incubator is just what it should be for the best results--which has been proven out in actual use. Therefore, they are guaranteed to hatch every hatchable egg, and to develop bigger, stronger and healthier chicks.

Practical experience has shown that they fulfill this guarantee in every respect. Their automatic heat and moisture control start chicks right--make it possible for them to grow into quick, profitable maturity. Ask the Buckeye user--he knows.

Certainty of Results

But, regardless of perfect incubation, the profits of poultry come from the chicks that are raised. Buckeye Brooders have actually revolutionized the raising of chicks by preventing the awful mortality that made chick raising only a gamble

BUCKEYE

They have put certainty of results in the place of chance, by raising every raisable chick, reducing this mortality to a negligible percentage.

Buckeye "Colony" Brooders are supplied to burn coal, gas or oil. Literally, they make three chicks grow where one grew before, at a quarter the labor and half the expense. They are guaranteed to satisfy, or the money will be returned at the end of thirty days.

Buckeye Lamp Heated Brooders for smaller lots are equally efficient. With Buckeye brooding equipment, success is certain.

This Way to Profits

Over a million users find the way to profit lies through Buckeye Poultry Raising Equipment. Its use replaces doubt with certainty, increases the income and decreases the expense.

You may learn the reasons for this by a study of the Buckeye illustrated catalog, which will be mailed free on request from the factory, or by calling on any one of the more than 10,000 Buckeye dealers in all parts of the world. Get that catalog, study the many superior points of Buckeye Incubators and Brooders and then equip yourself for larger profits. If interested in brooding, ask for our new booklet, "The Revolution in Chick Raising". Write us today.

of poultrymen more than 300 tickets were sold at \$2.50 each, and the governor of the state of New Jersey was a guest. He came not to congratulate the mere winners of prizes but to recognize and commend the improvers of the races of domesticated fowls, on whom rests a billion dollar poultry industry.

In this connection we add that the Chesapeake Western Railway offers four cash prizes of \$500, \$250, \$150 and \$100 for the four best pens of largest sized birds of pure breeding grown in 1922. The competition is to take place at its railway station at Harrisburg, Va., November 4, 1922. The Chesapeake Railway knows the importance of increasing the buying power of the people in the territory adjacent to its rails. Every railroad wants to run through a rich and prosperous country, just as banks and merchants want their communities to be prosperous. That accounts for the increasing interest in poultry of good breeding.

White Leghorn Club in Action.

Pursuant to the action of the National White Leghorn Club, at its annual meeting during the Milwaukee show, Thanksgiving week, to prepare, publish and distribute one hundred thousand White Leghorn Standards, Secretary Rolf has had Artist Schilling submit idealized outlines of a White Leghorn male and female.

The club standard is not to be copyrighted and is to be disseminated purely for educational purposes. We are therefore permitted to reproduce the tentative outlines herewith.

These sketches are being submitted to leading breeders for criticism and suggestions. During the Chicago show several prominent breeders and judges, including D. W. Young, Frank Gloeckl and Frank Rogers gave the pictures careful study. The consensus of opinion was as follows:

The illustrations are a vast improvement on the pictures of S. C. White Leghorns appearing in the present Standard of Perfection. The comb of the male is good. The wattle should not narrow in so much at the beak, for such a wattle is almost sure to fold. The

The artist's first outlines of ideal Leghorn type as submitted to the National S. C. White Leghorn Club for the new Club Standard.

sickles and tail coverts are too long for a cockerel and represent the furnish desired in a cock. There should be one more lesser sickle to fill up the open gap below the main sickles. The drum stick of the male is too long; and a cockerel to make so high stationed a cock would be entirely too leggy.

The hen suited the breeders very well, in all save tail. The lower main tail feathers were considered too long. The back covering well up onto tail was considered very nice. It will be noticed that this is a sixteen-feather tail, eight on a side, whereas the Standard of Perfection shows seven feathers on a side.

Proper Packages.

Geo. A. Hoover, of Ohio, writes:

"I have noticed reference to 'Proper Package Month' and believe that a concerted campaign on the part of our poultry journals and the American Poultry Association relative to proper packing of hatching eggs for shipment would be of great value to the poultry industry.

"Last spring I received 98 W. Wyandotte eggs. These eggs were wrapped separately in excelsior and firmly packed in a bushel basket. They arrived in fine condition and I hatched 68 fine chicks from the lot and reared all of them.

"About the same time I bought 100 eggs from another breeder. He sent 108 eggs in a cubical wood box with ordinary card board divisions and packed in bran. There was an excelsior pad on bottom of box but a space of about two inches at the top had no covering of any kind so that when box was placed on sides the eggs rolled against top, breaking 37 eggs and smearing contents over most of the balance.

Later in candling before placing in incubator, I found five more with cracked shells. I hatched 13 chicks from the remainder.

"I know that President Thomas F. Rigg will lend valiant aid to any program to promote an era of fair dealing and service between breeder and customer in the sale of hatching eggs."

The service that a breeder gives to his customers is a priceless element that brings repeat orders. Containers for shipments are highly important unless the seller expects to deal with an entirely new trade each year; and a permanent business cannot be built on that basis.

Black Junk.

We are in receipt of the following letter of inquiry from Seattle:

"I noticed you are a judge of poultry, and would like to know if you would favor me with information regarding some chickens I have. I bought the chickens of Edward Daniels of Seattle, Wash. He left Seattle all of a sudden, taking his stock with him, and not being able to locate him, I cannot find out what I have. The stock was sold to me as 'Improved Black Giants,' having feathers on their legs. I am in doubt as to what they are. I am sending you one of his advertising sheets so you can see for yourself. What I would like to know is, are any such birds bred in the East under the name of Black Giants? I know of all there are here and they all have long black feathers on feet and legs. Their legs are black, with white on bottom of feet. Please give this your careful attention as I would like to know what to do about them before selling any eggs."

Black Giants dress a yellow skin and have no feathers on shanks. Black Langshans have white skin and feathers on shanks and toes. Whether the bottoms of the feet are white or yellow indicates the color of the skin. White bottoms of feet disqualify a real Black Giant, as do feathers on shanks.

Evidently some poor Black Langshans have been palmed off on our correspondent. If they were not poor representatives of the Langshan breed, they would be worth more as Black Langshans than as questionably "improved" Giants.

Our advice to the unfortunate purchaser in Seattle is to dispose of his black junk for table purposes and secure some specimens of an established breed.

In times like these, when there is not enough failure to go around in the poultry

(Continued on page 36.)

Putnam Home Made Brooder

Costs Only
\$4.96

with Brooder Heater
In Successful Use for Years

YOU can make a better brooder than you can buy. A 14-year-old boy can do it in an hour with no tools but saw and hammer. Your brooder complete with Putnam Brooder Heater, ready to receive the baby chicks, need not cost you more than \$4.96.

This home-made brooder will care for from 25 to 60 chicks. You can make as many brooders as your plant demands. Naturally, chicks do better in small flocks.

The Putnam Brooder can be operated anywhere—in the house, in an open shed, or a roof can be provided and the brooder set out of doors. The hover is so constructed that the chicks find the exact temperature they need. The hover can be adjusted to suit any season, February to July.

The Putnam Brooder Heater is constructed on the principle of an open fire-place. It carries out the foul air and draws in fresh, invigorating air, providing continuous ventilation. Heat is radiated from above upon the backs of the chicks, just as with the mother hen.

The Brooder Heater is made of brass and heavily galvanized iron. It is practically indestructible.

The Putnam Home-Made Brooder is easy to clean. You simply lift out the hover and the heater. The floor of the Brooder is even with the ground; the chicks have no steps or inclines to learn. They don't get lost or cold.

The heater holds one quart of oil and burns ten days without refilling or trimming; needs no other attention. Every other brooder must be filled and trimmed every day.

HOW TO ORDER

I sell the Putnam Brooder Heater only. The price is \$4.75. Within every Brooder Heater are easy-to-follow directions for making the Home-Made Brooder. Your dealer should have the Putnam Brooder Heater in stock. Ask him for it. If

he doesn't have it, send me \$4.75, check or money order; I will ship one at once, postpaid. In ordering, please state your dealer's name.

GUARANTEE

I guarantee the Putnam Brooder Heater to give satisfaction or it may be returned in good order within thirty days and the money paid for it will be refunded.

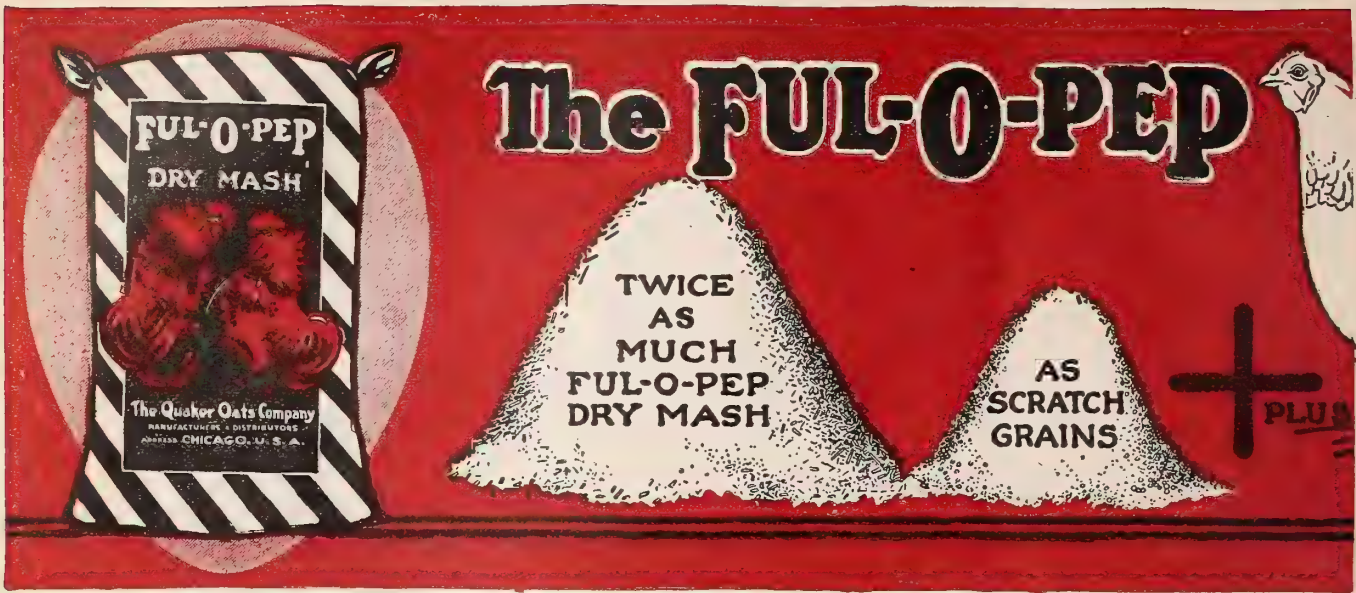

Plans for building Brooder and testimonials from satisfied users sent free on request.

The FUL-O-PEP

TWICE AS MUCH FUL-O-PEP DRY MASH

AS SCRATCH GRAINS

PLUS

Albert Angell, Jr.

The man who discovered that "scratch grains don't make eggs" and originated the Ful-O-Pep Way which calls for the feeding of twice as much Ful-O-Pep Dry Mash as scratch grains.

Where Ful-O-Pep Feeds Are Made

The Successful Method

"SCRATCH feeds do not make eggs" is the slogan we adopted in our nationwide campaign for greater poultry profits the Ful-O-Pep way. Since making this assertion and driving it into the homes of thousands of poultry keepers all over the land, we have received no end of letters from poultrymen and women, to the effect that we had made a discovery of great importance and that they had discarded the old method for the Ful-O-Pep way with immediate results. Many of these reports are little less than phenomenal in the production of eggs obtained. The same also is true in relation to the making of rapid growth. It was found, likewise, that an all-grain ration failed to grow and mature the greatest number of all chicks hatched.

The theory was correct and based on the discovery of the Ful-O-Pep Dry Mash and Growing Mash—against the customary methods of feeding all-grain rations.

The gist of the Full-O-Pep way is to so manage the young and old stock that they

Of Raising Poultry

consume twice as much mash feeds as the grain ration—and giving grain only once per day—at roosting time.

The Ful-O-Pep Mashers are consumed by the young and old in greater quantities than any other ground feed—and yet the cost of producing the eggs and meat is just about one-half. This is partly due to the oatmeal content, as well as the great feeding value of many other ingredients.

In conjunction with the keeping of the Ful-O-Pep Mashers before the fowls at all times, Ful-O-Pep Scratch Grains are given one hour before roosting time—a quart to each one dozen hens—and to the young stock all they will eat up clean in about twenty minutes. This is for the hens' "up-keep" and to supply the growing stock with a more sustaining ration while roosting. Ful-O-Pep Mashers are easily assimilated, and if the last feed of the day were not grain, the fowls would become hungry before morning.

Thus is explained the Ful-O-Pep way for making eggs and rapid growth. Once tried always used.

and we will send sample of material used in our incubators and brooders. Then you will know why Wisconsin's are built better—why they last longer and give you the most value for your money—why they have been giving purchasers the fullest satisfaction year after year, and proved their superiority over others regardless of price. Think of it! Here is our

130 Egg Incubator and 130 Chick Brooder

Both \$17.75
Machines
Freight Paid For Only

If you prefer larger machines, order the next size incubator and brooder which are the same style as the 130 Egg machines—our

180 EGG INCUBATOR & BROODER Both Only \$22.00

We pay all freight charges to your nearest R. R.

Station, if east of the Rockies and that far if west of the Rockies. If you want a still larger outfit you will make no mistake if you order our

250 Egg Incubator & Brooder Both Only \$30.00

It pays to investigate before you buy. Wisconsin Incubators have double walls, the outer wall is of California **REDWOOD** and the inner wall is of insulating board, with dead air space in between the walls. They are hot water heated—have double glass doors—non-rusting **copper tanks**, self-regulating. Roomy nursery under egg tray. Incubator finished in natural color showing high grade California Redwood lumber—not painted to cover up inferior material. Both machines are shipped complete with all fixtures and book of directions—all set up, ready to use when you get them.

30 DAYS FREE TRIAL—YOU TAKE NO RISK

Select the size machine you want and if they are not perfectly satisfactory, after 30 days trial, you can return them and get your money back. Order direct from this advertisement or write today for free catalog.

WISCONSIN WICKLESS OIL BURNING COLONY BROODERS

For those who prefer Colony Brooders, here is the best you can buy at lowest prices. Automatic control—can't go out—can't overflow—burns steady flame—best Colony brooder on market.

business, but business is not so good in some other lines, it is natural that a certain proportion of slickers should gravitate toward the poultry business; some to take subscriptions for poultry papers, some to sell poultry tonic, some to palm off junk stock at purebred prices, others to collect farm eggs and turn them into baby chicks to sell in department stores. Now, of all times, is when the beginner especially, needs the protection that a well-regulated publication, such as A. P. J., throws around him.

We do what we can to further the legitimate interests of our family of readers. Advertisers know this. When the reader writes that he "saw the add in American Poultry Journal," it puts him in a preferred class of enlightened and discriminating buyers.

Of course we cannot help those who choose to buy their chicks in a five-and-ten-cent store, or those who choose to buy from hatcheries that do not advertise in this paper. We cannot share with them the disappointment of chicks not true to name or of late delivery of chicks.

Neither can we hold out much hope of consolation for the man who would "trade true rules for odd inventions" on the assumption that continued selective breeding over a series of years does not lead to improvement, and some new cross, freshly made, must be superior.

* * *

To Increase Express Rates.

Thos. F. Rigg, President American Poultry Association, has addressed the following communication to the purebred poultry breeders of America:

"I have direct information that Mr. R. S. Wheeler, assistant traffic manager of the American Railway Express Company, 51 Broadway, New York City, N. Y., contemplates filing with the Interstate Commerce Commission a rate double the first class rate on all poultry shipped for exhibition purposes.

"I am asking you to immediately wire and later write Mr. Wheeler calling his attention to the fact that the filing of such a rate would work a great injustice to the Standard-bred poultry industry of the United States. Please enlist in this service as many of your friends as possible. It is an extremely important matter.

"The time to kill this proposed increase in express rate on poultry shipped for exhibition purposes will be before the rate is filed before the Interstate Commerce Commission and receives the endorsement of that body. Please give this your immediate attention and your very best effort."

While data seems to be lacking to show the cost of carrying poultry for exhibition in comparison with other express shipments of similar nature, a suggestion of doubling rates at a time when the tendency is toward lower costs of transportation, is astonishing. It would effectively embargo long distance shipments to poultry shows.

J. S. Morris, White Orpington breeder of Ohio, who has shown at New York for a number of years, remarked that he would have to give up exhibiting at the Garden if such a rate on express should go into effect.

Mr. Rigg has appointed a committee of which he is chairman, with H. C. Wood, Theo. Hewes, D. Lincoln Orr and John Lowell to appear before the Interstate Commerce Commission.

Patterson vs. Hogan.

C. T. Patterson, formerly head of the Missouri Poultry Experiment Station, has recently stated that he agrees with Mr. Hogan in selection of females, the birds fade their shanks and molt late, but in the selection of a male, he wants just the opposite of what Hogan recommends.

While Hogan selects the male in the same way as he selects the female, i. e., thin pelvic bones, spread between the pelvis, and large abdomen, Patterson wants the male to be "tight, hard and close, or just the opposite of the female."

In setting forth the reasons for his preference, Patterson writes in The Leghorn World, as follows:

"If we select a good dairy cow we want one which is narrow through the shoulders both ways, and widening farther back till

DAVEY'S MADISON SQUARE GARDEN AND BOSTON WINNERS

White Plymouth Rocks, S. C. Rhode Island Reds, Silver and White Wyandottes, White Leghorns

Grand, good show birds with breeding back of them not exceeded in the whole world. Single birds. Expert mated pens or a whole string for your show. Best of conditioning. Moderate prices. Thirty years a breeder and judge.

F. H. DAVEY Box 40 GREYSTONE, YONKERS, N. Y.

Mr. Poultryman: How much money are you going to make next fall and winter?

To a great extent this will be determined by your good or bad judgment now in placing your order for baby chicks. Good chicks only come from good eggs, and good eggs only come from good breeding stock, and good breeding stock only comes from generations of good breeding.

Lord Farms S. C. White Leghorns

have generations and generations of good breeding back of them. The Lord Farms are the largest producers of high classed, utility Leghorns east of the Mississippi River. From a small beginning we have developed into one of the largest Poultry Plants in the United States. Our birds are bred in every State of the Union and there is scarcely a City, Town or Village in the United States that hasn't got our Leghorns, either directly or indirectly.

The Lord Farms does not leave one stone unturned to produce the finest utility Leghorns possible. The first requisite of good stock is good health. The foundation of our success, and of yours, depends to a great extent on this quality. The wonderful vitality of our chicks year after year, due to our breeding methods, is superior to the average farm. We unhesitatingly make the statement that there is no other farm, putting out any where near the number of chicks we do, that the customer raises a proportionate equal number. This tells you the story as to the vitality in our stock.

Two other features you must have in Leghorns to class them as "High Class, Utility Leghorns,"—good eggs and lots of them. If you buy Lord Farms stock you will not be disappointed in the size of the

eggs produced from your birds, nor the quality and color of the same. We don't claim to have a chalk white egg strain but we do claim they are extra good or better than the average in this respect. As to the size of the eggs—there is no other farm can compete with us.

Now when it comes to the question, How many eggs our birds will produce in our customer's hands, we can't make any statement. Some people get less than 100 eggs a bird, and others, from the same quality of stock, would get nearly 200. We have got birds that will lay the eggs if they are properly cared for, and will lay as many as any strain you can buy on the average.

If you buy your chicks from the Lord Farms you will get an even, uniform lot of stock that will mature early for their size. Some commences to lay between the fourth and fifth month and about all of will be laying between the sixth and seventh month, if properly handled. Our pullets will weigh one pound more than the old fashioned American Leghorns. Some of the hens will weigh up to six pounds and more. Our stock is all bred from pure white birds. Our one great aim is to get uniform quality. For such stock our prices are more than reasonable.

We Sell Our Chicks in Three Grades

"Specials" "Grade A" "Grade B"

Our "Special" chicks are all raised from large, well bred, special hens—from hens that have been early maturing stock and very late layers—birds that average well over 200 eggs as a flock, bred to cockerels weighing not less than six lbs. Price 50c each. Only a limited number of these chicks for sale.

Our famous "Grade A" chicks. This is the grade that has made our Farm famous all over the Country. The coming season every Grade A chick will be bred from only old stock, no chicks from undeveloped pullets. They are bred from our

"Specials" and are mated to high class cocks and cockerels from our highest egg producing strain. Every individual bird has been tested by the State of Massachusetts for White Diarrhea. For this quality of stock our price is only \$28.00 per 100, \$27.00 per 100 in thousand lots.

Our "Grade B" stock is of the same strain as our "Grade A" and "Specials," with this exception—that the stock is younger and not as carefully culled as our two better grades. The price of our Grade B is \$25.00 per 100, \$24.00 per 100 in thousand lots.

Eggs at About One-Half Price of Chicks

The Lord Farms has about 400 acres devoted to the Single Combed White Leghorn exclusively. Don't confuse our chicks with Common Hatchery Stock. Our chicks are cheaper in the long run than any other chicks you can purchase because you will raise more, and when they are raised they will lay more and lay eggs of first class quality.

THE BROWN FENCE & WIRE CO.

Dept. 31, Cleveland, Ohio

she is wide and deep through the hips, but in selecting a male to produce high producers we select the male which has a powerful neck and shoulders but tapers back so he is narrow through the hips.

"Even with man, the woman who is true to all feminine characteristics is narrow through the shoulders and wide through the hips, while the man of power is wide through the shoulders and narrow through the hips, etc., so in selecting the male and female for high egg production we prefer for the sharp end of the wedge to point to the front of the hen but point back with the male.

"We use the trapnest records as our basis of selection for breeding and, as many people wish to buy birds which test good by the Hogan test, this works out very satisfactory for I am always willing for anyone to take the best male on the farm by this test for I wouldn't use him myself.

"As to the general vitality and appearance of the male we like for the bird to feel that he is the most important bird on earth and if we can agree with him the chances are he will get a favored position."

H. V. Tormohlen endorses Mr. Patterson's system as sound and workable, stating that after several years of observation "we believe as much in selecting our males by the Patterson system as we do our females by the Hogan system."

Perhaps the Patterson system may be explained by assuming that a male is effeminate, whose anatomy is similarly formed to that of a highly fecund female, and that the stronger breeding male is a wide standing, high shouldered, big breasted bird, with a masculine head and heavy neck hackle, even though he is pinched together in the stern. On this basis of superior vitality and pronounced masculinity in the male, it would appear reasonable that such a bird, provided his dam was a big-barrel hen, would produce thrifty and prolific pullets when mated to females heavy in the posterior section. If, on the other hand, the female were heavy and arched in pelvic bones, and pinched behind, indicating small intestinal capacity, we would not expect much from her pullets if she were mated to a Patterson male.

* * *

The Profile View.

The Standard illustrations, with the single exception of the Cornish, present a side view of the bird.

Dan Young remarked during the Chicago show that he never owned a Standard, consequently had never studied it, until only a few years ago when D. Lincoln Orr called on him to judge the Cornwall, N. Y., show.

Said Mr. Young: "The side view of the Standard illustrations is not enough. If you were going to build a ship, you would want to know how the ribs were to be sprung. You would want to know something about the top view.

"Out in California, where I have been all year, there are a million Leghorns. It gives me pleasure to come back and give the boys the benefit of my knowledge of the ideal birds. The stock in California is a long call from the type I worked so hard to develop, and with that success which enabled a breeder to remark: 'The winning birds today carry the stamp of Dan Young.'

"The first Leghorns that my father bred were not white. The females had colored breasts. Whiteness came from breeding. When I took hold of the birds, I got away from the old squat type, to give the birds better action of legs. I bred a full front to give crop capacity; although I do not like a pouter fronted bird. I bred the keel long and up to give proper support to the intestines; and you will find in California that the keels are shorter as a result of Hoganizing, and that turning out of the oviduct is one of the most serious and difficult problems that the poultrymen have with their pullets. I bred more covering on the backs to protect the kidneys and ovaries; as a result the tails came lower. I never bred for low tails; but in breeding a heavy back covering that ran out onto the tails, the tails couldn't stick up thru it. Don't change our present Standard exhibition Leghorn. I never bred little birds, or weak birds, or narrow bodied, round shouldered birds. The high class Standard bird is not that kind."

**I Wouldn't Part with My No-Cold
Brooder Stove for \$50.00 if I
Couldn't Get Another Like It**

That's what Mrs. D. C. Forrer, Windfall, Indiana, said about the No-Cold after raising 95% of her chicks. We have hundreds of other enthused customers.

We want to tell you about this wonderful chick mother. It's the leading oil burning brooder stove of America. It eliminates all fussing and worrying. The wickless burner burns a whole season without cleaning; the automatic valve and damper holds the temperature as accurate as an incubator regulator. Plenty of heat for coldest weather. Don't buy a brooder stove until you see our large circular. Write for it today.

You Can Get More Eggs

Little Putnam Stove keeps water unfrozen—not hot.

Over 90% of the Egg Is WATER

Give your fowls all the pure *un-chilled* water they can drink, and watch them shell out the eggs. One of my Little Putnam Stoves will keep enough water unfrozen to supply 30 or 40 fowls, even in the coldest weather. This Stove holds 3 pints of oil—requires no attention except a monthly filling, due to my patented burner. It's fireproof and non-explosive—can be operated anywhere. You can run it all winter at a cost of from 20 to 30 cents. You'll get enough more eggs the first month to pay for it.

Little PUTNAM Stove

\$2.00
Postpaid

Little Putnam Stove

can also be used as a heating unit for an easy-to-make and easy-to-operate Oat Sprouter. Full directions for making the Sprouter are packed with every Little Putnam Stove, or I will mail a set free and promptly if you will request it, and send your dealer's name.

GUARANTEE—I guarantee the Little Putnam Stove to give satisfaction, or it may be returned in ten days and the money paid for it will be promptly refunded. Most dealers keep it. If yours does not send me his name and \$2.00, check or money-order, and I will send you a stove post-paid.

The New Year Depends on the Breeding Pens

(Continued from page 13.)

chicks. The fowls in order to maintain health and vigor, must have abundant exercise and green and animal feed. Unlimited range affords all this. Also, breeding birds should not be pampered and the free range birds have the advantage because they have the opportunity to rought it, which confined fowls do not have. We do not want any hot-house stuff in our breeding pens.

The feeding of the breeding stock should have careful consideration. A hen intended for breeding purposes should not have stimulating food similar to that of a hen kept for laying purposes only. While it is all right to force the laying hens to a reasonable extent, it certainly is wrong and harmful to apply the same tactics with the breeders. Our object is not to see how many eggs we can get, but rather to exert our efforts in keeping them in health and vigor, in prime breeding condition, and to resort to red pepper or condimental tonics in an endeavor to unnaturally stimulate the laying of eggs is certainly defeating the very object we are desirous of obtaining.

Hatchable eggs are desired by all poultrymen alike, for there certainly is nothing that will dampen the ardor of the would-be poultryman more than the getting of poor hatches, lest it be big losses of chicks after they are hatched. It is discouraging, to say the least, to set hen after hen, and have very little to show for the time and trouble and expense expended. A chick well hatched may be considered as half raised. A good start is the main thing. A chick that is brought into the world possessing a great amount of vitality can be reared successfully even under adverse conditions. Such chicks will grow and thrive and develop into large, healthy, profit-producing specimens. In order to realize our hopes in getting such chicks we must exercise proper care in the selection of the breeding stock and the hatching, as before stated.

The hatching eggs should be culled as closely as the fowls, and any eggs that have thin or porous shells, ridgy or extra thick shells should not be used. Especially should we avoid using thin shelled eggs under hens for they are likely to become broken and the contents run out and coat the other eggs, sealing up the pores and endangering the entire hatch. Thin shelled or soft shelled eggs are usually the result of an absence of shell forming material, or lime, or due to an overfat condition of the fowls; and in some cases may be due to a condition similar to abortion in cattle.

Feeding for fertility is perhaps just as important as feeding the laying hens for a good egg yield. It is my opinion that proper rations go a long way in securing a high percentage of fertility. In the spring when the fowls have the run of the range, fertility as a rule is high. This is attributed to the natural laying and breeding season and to the fact that the hens can pick up any kind of feed and can balance their own rations. If we supply the fowls with the same food and conditions we may hope to receive practically the same results. They must have green and vegetable feed, and some kind of animal feed. I also like to feed the breeding stock raw potatoes and mangels. I am not an ad-

What Jim Taylor Has Done — You Can Do

READ WHAT GEORGE BROWN SAYS:

"Hello George—What's the news?" asked Jim Taylor as George Brown came over to Jim's new poultry farm. "Howdy, Jim," says George, leaning against Jim's fence—"Say, Jim, much obliged for that 'tip' you gave about The National Poultry Institute. When you told me to

write for their free book 'How to Raise Poultry for Profit,' I had my doubts, but when the book came shooting back by return mail I sat up till early morning reading it; it's the best stuff I ever read, and I realized then that IF YOU COULD MAKE SUCH A BIG SUCCESS FROM POULTRY I COULD. So, I followed their advice—as you did—and I have not only 'made good' but I think I have done even a little better than you; they have shown me how to make money from my flock—and at the same time my health has improved a lot—Look me over. Best of it is, the Missus and the kiddies get as much out of it as I do."

From the letters we receive every day there are many others who can say the same as George Brown.

Send Quick for this Book

"How to Raise Poultry for Profit"

The most interesting, fascinating and "worth-while" book on poultry raising ever offered free. It contains information on

HOW to Feed for good results;
HOW to Cull out the poor layers;
HOW to plan the Poultry House;
HOW to assure yourself of SUCCESS in Poultry Raising.

This valuable book also gives you a brief history of the leading poultry experts of the country—men who have been recognized as poultry authorities by the United States Government and by leading Agricultural Colleges and Universities. It tells you WHY these men have associated themselves with The National Poultry Institute, and HOW they are improving the Poultry industry, not only in the United States but in 17 foreign countries.

You CAN Raise Poultry for Profit

You can do as well as Jim Taylor, and others are doing. Following are a few of the hundreds of letters we receive from all parts of the world:

Glad He Wrote

Harold Callender, Rensselaer, Ind., writes: "I am glad I answered your ad in American Poultry Journal. I wish to say for the benefit of those who attempt the poultry business that it is most important to have a thorough knowledge of the business in order to make a complete success, and you have given me the necessary knowledge. I thank you for your kind attention to my letters."

A Pleasure to Her

Many women make successful poultry raisers. Mrs. J. E. Carleton, Williamstown, Vt., writes: "Your information and advice is easy to understand and well arranged in every detail. I have always received prompt attention and a square deal from you. Under your guidance poultry keeping has certainly been a pleasure to me."

Now Has His Own Poultry Plant

Walter J. Warthen, Norwichtown, Conn., says: "When I sent for your free book and other information I knew practically nothing about poultry keeping. I am now successfully operating a commercial poultry farm and I am getting along fine. Your advice has been thorough in every detail."

GET THIS BOOK—NOW! It is for YOU whether you are an established poultryman, or whether you have only a small flock—or would like to have one. Write TODAY. A postal will do—but DO IT—NOW.

vocate of feeding a great amount of moist mash to the breeding fowls. I believe a dry mash produces the better results. Continued feeding of wet, sloppy mash is bound to get the fowls out of condition.

Right here it may be well to offer a final suggestion in regard to the male birds heading the pens. We often find cases where the male is so gallant as to deprive himself of the necessary amount of food in order to let his consorts in the pen have it, thus getting himself into thin flesh and poor physical condition. To overcome this, tack a tincup to the wall, just out of reach of the hens and fill it with feed night and morning and the male can then help himself at will.

Need of Adequate Land for Poultry Farming.

(Continued from page 15)

fication and that as exclusive poultry districts grew the problems would have to be faced and overcome.

Just what special problems can there be? How may they be best met and solved? They cannot be avoided or ignored, and must therefore be met squarely and with all of the knowledge at our disposal. As is so often the case, when really studied they are solved far more easily than at first would seem possible.

We find that as countries grow more and more thickly settled, it becomes increasingly necessary to observe sanitary precautions. The city of New York, for instance, maintains a health and hygiene department, absolutely unnecessary in the days when Manhattan was a Dutch village, or even as far back as fifty years ago. The increase in population over a given area, whether it be of humans or live stock, brings with it distinct sanitary problems. The disposal of the sewage, the need of careful and endless inspection of the water and milk supplies, the need of prompt action when some contagious disease makes its appearance—these are but a few of the problems with which the health officials are faced daily and hourly. Cannot we see a similar condition arising when thousands of chickens are kept in close proximity to each other? Cannot we see that if one flock of just a few fowls are permitted to develop some contagious disease, the entire colony is endangered?

Furthermore, aside from the problems arising from the spread of disease, we note that fowls running over the same piece of ground from year to year, are far more liable to contamination and disease than those permitted less restricted range. When poultry farms are cut up into small units, close to each other, and when poultrymen maintain large flocks on a limited area, we find that the mortality is liable to rise to a considerable extent. Professor Dougherty, University of California, tells us that the mortality among some of the intensively conducted poultry farms in that State runs as high as 40 per cent per year among mature fowls, and this despite the more than ordinarily careful sanitary precautions maintained. It is therefore very plain to us that intensification brings its own troubles. It is natural for chickens to run at large. It is their heritage from the days when the entire jungle was at their disposal. When we transplant them to the intense, crowded methods of modern poultry communities, we must face the dangers of intensification.

The two photographs in this article were taken in California. On one we see poultry being housed under the most intense system known to modern poultry culture. Here are between 3,000 and 4,000 birds housed on one acre of ground. Naturally on so restricted an area the fowls cannot be permitted any range. They are confined to their quarters day after day, month after month, and year after year. To be sure, they have roomy, well-ventilated houses, protected from the elements, and their care is simplified by a number of ingenious conveniences calculated to make the work of feeding, watering, collecting of eggs, and clean-

Here's health for the chicks!

RELIABLE Standard Blue Flame Wickless Oil Heated Colony Hover

IN common with all other RELIABLE products, this Hover is a dominant leader. We are originators of the Blue Flame Wickless Oil Heated Hover. Like all good things, the RELIABLE has been widely imitated—but by no means duplicated. Its chief distinguishing features are of no small importance to the practical poultryman.

For instance, the RELIABLE heater is wickless and valveless—which precludes all possibility of clogging or overflowing. No metal vaporizers are needed. Just touch a match to our special Asbestos Lighting Ring, and the heater is on the job at once. This ring cuts the oil consumption at least one-third. The flame is instantly adjustable to any height desired.

The oil heated Hover has distinct advantages. No coal—no fumes—no odor—no dust—no noise. Holds sufficient oil for 24 to 36 hours. The RELIABLE requires no attention—just light it and leave it. Whatever the weather outside, the chicks have fresh, warm air, kept at an even temperature. They have all the floor space under the canopy, as heater is raised up. All odors are at once expelled through the ventilator in the canopy. Sizes for 100 to 1000 chicks.

Our canopies are shipped complete and are reinforced around bottom with one quarter inch iron rod, and are not shipped knocked down, but are put together ready to attach legs and operate.

RELIABLE Standard INCUBATOR

is the ultimate achievement of the old Reliable makers who have been at it for 41 years. This is the only incubator with the double heating system, makes it doubly safe against the danger of sudden chills. It maintains absolutely uniform temperature with a constant circulation of fresh, clean air. It has ample nursery space. It has everything that a RELIABLE Incubator should have, and nothing that it shouldn't have.

50 to 1100
EGG CAPACITY

The RELIABLE
Coal Burning
Brooder

is universally recognized as the most efficient of its type. It burns either hard or soft coal—has largest coal capacity. Self feeding—easiest to keep clean—most economical. Gives steady, automatically regulated heat. Stove is filled without raising canopy. Has special screw plate draft for soft coal burning. There are no cold corners. Every detail of construction measures up to the well known RELIABLE standard.

A Positive Money-Back Guarantee

safeguards your investment in RELIABLE Incubators, Brooders, Hovers, Poultry Appliances and Equipment. If there isn't a RELIABLE dealer in your locality, send us the name of the one through whom you would prefer to buy. Or we will fill your orders direct.

The Magic Brooder

The Wonder of Wonders

No person can ever realize the efficiency of this brooder until they try it.

Many people think "a brooder is a brooder" and one should be as good as another. A brooder that will not hold the fire nor maintain an even temperature will not do the work properly.

The Magic is built to do the work. It is equipped with both top and bottom draft regulation,

also coal magazine and gas escape system. The ash pans are made of galvanized steel and will not rust out. The deflectors are lock seamed and riveted. In fact, everything about the Magic brooder is quality from start to finish. They need attention only twice a day and will brood chicks at a profit. Without a reliable brooder it is impossible to succeed. Money refunded after thirty days' trial, including freight if the Magic brooder does not do all we claim. Send for free catalog describing same, together with plans for colony and laying houses.

UNITED BROODER CO., 348 Pennington Ave., Trenton, N. J.

UHL'S DAY-OLD CHICKS

Founders of First Successful chick hatchery. Our 22nd Season.

The largest and oldest successful hatchery. We produce chicks from free range stock that are strong, vigorous and full of pep. Years of experience have taught us how to hatch chicks that are satisfactory to our customers. If you want the best, we have them, all pure bred and at the most reasonable prices. We have the most popular varieties.

Satisfaction guaranteed or birds may be returned at my expense.

FUNK EGG FARM,

Lyle W. Funk, sole owner.

BOX 38, BLOOMINGTON, ILLS.

ing of the quarters simple and easy indeed. Perhaps under the fairly even temperature conditions of California such a poultry farm may be conducted successfully. From reports I have received I believe the egg production to be quite satisfactory, at least for the first or pullet laying year. It is plain, however, that the flock stamina must be maintained through either the constant infusion of new blood from stock that has been grown "close to nature, or by having the pullets raised on a freer range, possibly on some other farm. Purely as an egg manufacturing business this sort of poultry keeping may prove satisfactory. But as a means of perpetuating the species, that is to say, from a breeding standpoint, we may feel safe in feeling that it cannot be done.

We cannot deny that the concentration of poultry activities in localities specially favorable to that kind of work is one of the best methods of raising chickens commercially. As we have already noted, there are so many advantages connected with such a community enterprise that they may more than offset any possible disadvantages. But that these drawbacks must be met and then intelligently counteracted, must also be realized. The answer to these problems are to offset intensification drawbacks so that fowls may be kept well and strong from year to year, the mortality held down to a reasonable percentage, and as clean a slate kept of diseases as is humanly possible. Let us see what concrete action might be suggested in this connection.

Safety Measures to Be Taken

First and foremost: Every poultryman located in such a colony must possess as foundation stock fowls free from hereditary diseases and weaknesses. To be sure this should be a prerequisite whether we are ten miles from the nearest railroad or 100 feet from our next door neighbor, but especially is it necessary when we are located within striking distance of the flocks of others.

Second: We must maintain a health standard in our flock which will absolutely safeguard the health of our community's birds. This to be done by a very careful and high standard of cleanliness, and I am inclined to think, by a frequent inspection of every flock in a large poultry community by some disinterested, qualified man. This would eliminate much of the trouble we are liable to encounter from that source. That would assure us that any careless poultryman would have a check upon his activities which would safeguard us, in the first place, and teach him the need of maintaining his end of the responsibility in the second. It should be the business of this poultryman-inspector to give all flocks and quarters a periodic and thorough examination, and make the necessary and timely recommendations and condemnations. Of what use is it for you to maintain a fine healthy flock and clean quarters, if I permit filth, chicken-pox, roup, canker, or other troubles to ruin my flock and spread to yours? What safety have you? What assurance and peace of mind that all of your hard work will bring its reward? Nothing could be much more discouraging to a conscientious poultryman than to have his birds suffer from the sins of others. It is quite bad enough to have one's birds ill through one's own carelessness, but when disease is brought about by the carelessness and thoughtlessness of others, one has every reason to feel resentment.

Third: Sufficient acreage for our flocks, both old and young, to insure a proper ground rotation. It is appreciated that land in a poultry community comes high, but far better to maintain 500 fowls in good health and paying production than have 1,000 half-sick and crowded, which are a menace to their neighbors and a loss to the owners.

Some years ago the belief was firmly held by many that a large number of birds could be raised on a small acreage successfully and permanently. We have come back to the firm conviction that layers, as well as growing chicks, require running room. So we note now that many of the newer and most successful poultry farms are giving their birds far greater range facilities than formerly was considered necessary. More ground per unit of chickens will help to minimize the dangers of intensification. In visiting many poultry farms I have found that one of their chief problems is to counteract small yard space for large numbers of birds. Although the change

Fall and Winter Eggs Produced at 15c per Dozen With Help of "SUCCESSFUL" Grain Sprouter

Get the Facts About Our Grain Sprouter. Learn What It Has Done for Your Brother Poultry Raisers and What We Guarantee It for You

MAKE three bushels of fresh, green, tempting feed from one bushel of oats, wheat or rye. Turn loafing hens into money-making egg producers—have eggs to sell when prices are highest—get fertile eggs for spring hatching—all at a big saving in feed cost. Every poultry raiser should have a "Successful" Sprouter. Saves its cost in a few days' feeding and then keeps on saving money and doubling up your profits for a lifetime service.

Just what's needed in fall and winter to keep hens laying and needed again in the spring to make chicks grow into lively profit-producing birds. Write at once for complete 1922 offer. Sold on trial and pays for itself before trial runs out.

"SUCCESSFUL" Grain Sprouter

**Practically All Steel—
Made in Sections
New Safety Lamp Insures Doubly
Against Accident**

Double steel walls—metal trays. There is nothing else like the "Successful" Sprouter. It's a brand new idea. Cannot be compared to wooden sprouters. It is warp proof—shrink proof—swell proof—nothing in it to rot—food cannot mold.

Made with glass doors. Each section a separate compartment. Start with just enough sections for your needs and add more as you need them.

Here is a money maker that proves its worth right at the

Test seed corn and start your plants the easiest and surest way with this Des Moines Grain Sprouter.

20 lbs. raw (3 pecks) oats as shown above makes 70 lbs. of sprouted oats as shown below in the "Successful" Sprouter

This in one week's time—the best green egg-making feed obtainable.

SPROUTED OATS

Read These Letters From Owners

Enjoys a 60% Egg Yield

Big Run, Pa., Jan. 20, 1920. Gentlemen: Have had splendid success with your Sprouter, Incubator and Brooder secured last season. Very few people secure eggs this winter, but I have been getting about 60% from my flock. I know this is due to feeding correctly sprouted oats. I think the sprouter is just wonderful.

Mrs. Jno. L. Kelly,
Box A25.

80 Hens Averaged Nearly 25 Eggs Per Hen for a Month

Salem, Ore., Apr. 5, 1920. Dear Sirs: Your sprouter is the thing. Would not be without one since I have seen how sprouted oats increases and keeps up the egg yield. One flock of 80 hens averaged nearly 25 eggs per hen for the month of March. Many are getting interested in it.

Harold F. Phillippe
2199 Fairgrounds Road.

start. It has increased egg yields 50 per cent—in some localities more. Takes only 15 minutes a day of your time. Sprouts oats in 24 hours and then grows an inch of crisp green sprouts every day. One feeding of sprouted oats at noon each day is all that's needed to increase the egg yield. And at the same time you cut your feed cost one-third and settle your green feed problem once and for all. Write for full details.

may at times be costly, it is money and labor well spent to increase the acreage. We cannot have our cake and eat it, too.

We will find that even with strict methods of health supervision troubles will at times start in large flock units. It must be emphasized, therefore, that the health of poultry kept on an intensive scale can only be maintained by constant watchfulness and an eye that detects the first sign of trouble. One weak flock and the whole territory is threatened.

As time goes on we will find that those poultry communities which make a permanent success of their business are those where fundamental principles that underlie right management are adhered to. It is not natural for hens to be limited to a small area, and in order to keep them from suffering from this unnatural state of affairs, we must, through proper methods of feeding, housing, care, selection, culling, and health maintenance, keep them on a par with those fowls able to enjoy the greater freedom of a farm.

Fresh Ground for Growing Chickens

Aside from the problems of intensification encountered with mature fowls, it may be well to emphasize the need of proper soil conditions for the young chicks. It is an admitted fact that chicks do better on fresh range than on ground that has continually afforded pasturage for a chicken crop. The first lot of chicks in a permanent brooder house where

S. C. White Leghorn hen; record 250 eggs at Storrs, Conn. Owned by Emory H. Bartlett, Box 19, Enfield, Mass.

yards cannot be changed, almost invariably do better than later hatches. Why? Mainly because the ground, through its long fall and winter rest and plowing and freshing up, has become fit for them to run over. The second crop of chicks does not enjoy as good soil conditions, so the mortality goes up and the stamina goes down, in proportion to the strength of the chicks and the condition of the soil. The dreaded disease called coccidiosis which attacks chicks when they are supposed to be past all danger periods, is brought about by nothing more or less than soil contamination.

It is easily seen, therefore, that chicks running over a limited area in a strictly fenced poultry community, do not have the same advantages of growth as those enjoyed by the husky little farm chicks running after their mother through pleasant fields and quenching their thirst by some clear running brook. In some of the more intensely populated poultry communities of California the chicks are raised on other farms and brought practically mature to their winter laying quarters. But where this is not practical it must be seen to that proper ground and enough of it is provided for the chick and growing bird. This is another problem which the poultry community chicken man to think about. The actual number of chicks possible to raise to sturdy maturity should be gauged carefully. The temptation always lingers to crowd on a few more chicks each year, but it does not pay. Better to have a few good pullets each fall, buying the additional ones needed, than to have a large flock of undeveloped birds which are a direct loss to you.

All of these thoughts regarding intensification problems are being given careful attention by those engaged in developing such col-

Feed from Checkerboard Bag

Try the New Way To Kill Lice

A hen worried to death with lice can not lay if she wants to. You might as well "throw money to the birds" as feed high price food to lousy chickens. It's a dead loss—don't do it. Use "LICECIL." No dusting, no dipping, no painting. Hang up the bottle. It acts like magic. Testimonials from every state in the union tell of wonderful results from its use.

Simply put a few drops in nests and on roosts and hang uncorked bottle in coop or hen house. Powerful evaporating vapors which leave bottle are three times heavier than air descend in a misty form,

penetrating feathers, cracks and crevices everywhere. Lice, mites, chiggers, bed bugs, ants, roaches, etc., have no lungs—they breathe through the pores of the body, and are destroyed by Licecil vapors. Will not injure chicks. Bottle, \$1.00; 3 bottles for \$2.50; 12 bottles, \$9.00. Prepaid. Money back if it fails. American Supply Company, Dept. 54, Quincy, Illinois.

onies of exclusive poultry keepers on high-price land. Should you contemplate settling in such a colony, you will more intelligently assume your share of your community responsibility, if you appreciate the conditions. If your neighbors do the same, you will find that living in such a locality brings with it many blessings. But if you are careless, indifferent, or just plain lazy about such little matters as keeping your chickens clean and well, you menace the community with which you grace your presence. Fortunately, there are few of us like that. It only requires some eye-opening pointers to place us on our guard and enable us to see our obligations towards our birds, the community, and country at large in a clearer and more intelligent manner than ever before.

By all means let us continue to develop great poultry communities. Make them centers of the best methods of conducting poultry on a vast and fast-growing commercial scale. But let us not lose sight of our responsibilities nor the problems attendant upon them. With these frankly met and put into daily practice, we need never fear that the slightest cloud of doubt will appear above the horizon of our endeavor to "do unto others as we would have them do unto us."

Stop This Race for Novelities.

(Continued from page 18.)

for the admission of their variety to the Standard, and he adds that their plea should have the same consideration as that of the breeders of any other variety. This is one side of the case.

Let me present the other side by asking, are there not hundreds, yes thousands, of breeders of White Plymouth Rocks that have great financial interests in their variety, who are vitally concerned, if they have any foresight whatever, in the admission of Rhode Island Whites? Yes, there are, and I for one am opposed to admitting Single Comb Rhode Island Whites to the Standard because I feel that in the White Rocks we have a fowl so near like the Rhode Island Whites in the single comb variety that a Single Comb Rhode Island White is neither necessary or desirable.

Mr. Hewes states that the two varieties here discussed may be shown in each other's classes. That is, one variety may be sometimes panned off as a Rock when it is really a Rhode Island White, or a long backed White Rock may sometimes be shown as a Single Comb Rhode Island White.

This is already being done as I have observed at some of the Fall shows the past two years. Just recently a breeder of White Rocks in Wisconsin won all the prizes in the S. C. R. I. White class. The admission of the S. C. R. I. White will encourage more of the practice.

I believe that if Mr. Hewes were a leading breeder of White Rocks, he would not cherish the idea of having a closely similar variety admitted to the Standard. It certainly is not fair to the White Rock breeders or to the White Rock variety itself. Of course, the White Rock breeders are not afraid of fair competition with other distinct and independent varieties, nor are they afraid that the White Rock will fail to hold its own as far as that is concerned, but it is the principle of the thing that is wrong. It is an unfair thing to do and I for one protest against it. I am not a leading breeder of any variety but have in a small way been breeding White Rocks for many years and want to see them and their breeders get a fair deal, as I believe they will from the A. P. A.

Mr. Platt seems to think that a R. I. Black is not needed. I do not think that it is, and if anyone is interested in a long bodied, long backed, black fowl with yellow skin, and almost everything that a R. I. Black could be, then why in the name of common sense does said party not take up the old reliable Black Java? I for one am a friend of the old varieties and would like to see them come to the front again. Admitting other varieties to the Standard that resemble them in every way is a mighty poor way for the A. P. A. to create new interest in the worthy old varieties. If I was situated so that I could do so, I would enjoy nothing better than taking up some of the old, neglected,

Latest and best yet; 144 pages, 216 beautiful pictures and color plates. Hatching, rearing, feeding and disease information; describes the busy Poultry Farm, handling 53 varieties including Indian Runners. Tells how to properly choose fowls, eggs, incubators, cheap feed and PURE-BRED BABY CHICKS. This practical book worth dollars mailed for 10 cents.

Berry's Poultry Farm, Box 116 Clarinda, Iowa

but meritorious varieties, and I firmly believe that the old Black Javas, Dominiques, Dark Brahmas, Cochins, Hamburgs, and other old varieties are just as good as many of the newer varieties today. All they need is a Sheppard, Fishel, Thompson, Delano, or someone like that to be a leader. It is up to breeders of these old varieties to raise more chickens and tell the public a little more about them so that they may keep them before the public. They can find ready sale for all the stock they raise. The difficulty today is to find enough Black Javas to meet the demand. No man in America could fill an order for 50 Black Hamburg pullets, yet where is there a more beautiful or more useful small breed?

Possibility of Too Many Types

Speaking of type, I still think and always have thought that we have too many types; too many different types of Standard breeds. Now please do not faint, but I can see no good reason why the R. I. Reds and Plymouth Rocks should not have been of the same type in the first place. We are continually being compelled to lower the tails and lengthen the backs of our Rocks. On the other hand the R. I. Red men are being compelled to increase the size of the Reds. Talk as you please, I will venture to say that there are today many R. I. Reds in the winning classes, that, if they had the feathers of one of the E. B. Thompson Barred Rocks put on them, could win in most of the shows in this country in the Barred Rock class. Of course, I know that there is a difference between Rock type and Red Type, but not as much as there should be if there are to be varieties admitted to the Standard of the same identical color in each of these two breeds.

It was only a few years ago that a few breeders were boosting "White Anconas," but somehow the poultry people seemed to think they were not needed, believing that White Leghorns filled the requirements, and I guess they were not far off. That is another case where I have always thought that the two types might be one, in Anconas and Leghorns. Most of the winning Anconas at the shows are very little different from Leghorn type. Many Ancona men whisper that they want more Leghorn type. And take my word for it, if the Leghorn men increase their Standard weights, the Ancona men will go right up with them. At the fall fairs the average judge, in handling Anconas, gives preference to Leghorn type. This may not be true at the larger fairs like New York State, Hagerstown, etc., but from observation the last few years, I feel it is true at nearly all the smaller shows. The two breeds are so near the same type, why not call Mottled Anconas Mottled Leghorns and be done with it? Of course the Ancona breeders would probably not stand for this but in my opinion they would have been just as far ahead if, in the first place, this had been done.

Judges Who Know Many Varieties.

I have often thought about the article by Mr. Hewes in the Journal last season, on how to make some "real poultry judges," by having them trained to use the score card correctly. Have often wondered how many "real" judges have been made in this way since that article appeared. There may have been a good many, but I do know that the score card judges are still rare in Pennsylvania; furthermore, they are getting rarer each year. I am not opposed to score card judging if the scale of points can be applied correctly, but it does not seem to work out so well when it comes to using it in the show room. I have seen some of the best judges in this country judge by the score card and I cannot honestly say that their work gave as good satisfaction as the comparison method.

It was Dr. McCoy, of Missouri, I believe, who said no judge should be allowed to judge a class that he had never bred. If this rule were applied in small shows, how in the wide world would the small shows manage to hire enough judges to go around to the long list of varieties and the endless list of new varieties in the making?

It would be hard to find a judge that had bred every Standard variety. In fact, it would

(Continued on page 52)

Oat Sprouter \$2.49

THIS HOME-MADE oat sprouter was made in one evening by a 14-year-old boy with no tools but saw and hammer. The total cost, including stove for heating, was \$2.49. Thousands of these sprouters have been made at home by poultry keepers, and hundreds of letters in my files testify that it is the cheapest to make, the easiest to operate, and the handiest and best sprouter ever built.

Make Layers Out of Loafers

To make hens lay abundantly in winter you must feed growing green food that is rich in vitamins. Sprouted oats furnish the best of such food at lowest cost.

The Putnam Home-Made Oat Sprouter will supply better and sweeter sprouted oats with less fuss and dirt work than any other sprouter made. I will send you, free, easily followed plans for building this oat sprouter together with a full description of the Little Putnam Stove with which it is heated. The price of the stove is \$2 postpaid. Plans for building the Sprouter are packed with every stove, also instructions for using the stove to keep the water in poultry fountains from freezing.

You can't afford to be without this oat sprouter, even if you keep but eight fowls. Get a Little Putnam Stove from your dealer now. It will pay for itself many times before Spring. Most dealers keep it. If your does not, send me his name and \$2, and I will send you the stove, postpaid. Try it and if you do not find it all I claim and are not perfectly satisfied, send it back in 10 days and I will refund your \$2, together with the postage for its return. I'll run all the risk.

I. PUTNAM, Route 105-0, ELMIRA, N. Y.

CARRY EGGS SAFELY The Keipper Way

Fertility and hatching qualities of millions of eggs are damaged yearly by careless methods of shipping. Think of it. Why not save the fertility and insure satisfactory hatches for your customer by using Keipper Non-Shock Egg Carriers? Each egg held in place by rubber bands which prevent vibration in transit, ruptured tissues and injury to fertility.

You Can Safely Guarantee Eggs Delivered in These Carriers

Boxes shipped all assembled ready for use. Strong outer box can be used repeatedly

15 egg size each 35c.	-	dozen \$3.00	-	100 \$22.30
30 egg size each 60c.	-	dozen 5.10	-	100 38.25
50 egg size each 90c.	-	dozen 8.25	-	100 61.00

Remember, above prices include postage PREPAID. Others don't pay postage. Besides our factory at Milwaukee we maintain our own warehouse at Kansas City, Mo. and Fultonville, N. Y., and will ship from nearest point. Order today and be ready. Send for our illustrated catalog and save money. 30 and 50 egg size sold in half dozen lots at dozen prices.

Many Miles Make Big

Placed end to end, there are enough Old Trustys to reach from Chicago to Kansas City—enough to go around an entire state. And fifty or sixty miles more will be added to this long line again this year. Old Trustys hatch enough chicks every year to give every man, woman and child in the United States several good chicken dinners.

And when you consider the fact that there is an average of one Old Trusty to every six farms in the United States and every one turns out many dollar's worth of poultry every year, you can see the added wealth Old Trustys leave on the farms of the country annually.

Write To-day and Get My 1922 Reduced Prices

Old Trusty is a better bargain now than ever before. New improvements this year give you more for your money than at any time in Old Trusty's history. We turn out thousands of machines every year and for that reason we can give you a high quality machine at a mighty low price. Send now and get my new 1922 price and have Old Trusty on hand to get the most out of your early hatches—Old Trusty comes in four handy sizes with or without metal covers, so you see there is one to fit your needs.

The right temperature is the most important thing about getting a good hatch and we have taken special care to see that Old Trusty has the proper temperature at all times. It has triple walls of California redwood, insulated and covered with galvanized metal. And it has a pure copper heating plant invented by an engineer. Of course, copper costs, but we have found it pays in the better results it gives.

A new addition to Old Trusty is metal egg tray slides with a special moisture wick. This special wick is made to add just enough moisture to the air for proper hatching results. We have made conditions as natural as possible in Old Trusty and improved wherever possible. The big hatches that it gives to nearly a million customers year after year is proof that we have succeeded.

H. H. JOHNSON
"Incubator Man"

Are you in the "Old Trusty Ten-Year Club?" Anyone using Old Trusty ten years or more is a member. There are thousands who have used Old Trusty ten to fifteen years.

Old Trusty

Incubators and Brooders

of OLD TRUSTYS Hatches Every Year

Why does Old Trusty outsell all other incubators by several times? The reason is the best one there could be—Old Trusty makes big hatches year after year. After all, that is what makes any incubator a good one, that is what it is for, to make good hatches.

Old Trusty can be depended upon to make a good hatch every time, winter or summer, it makes no difference what the weather is. I could show you hundreds of letters from customers telling me that Old Trusty was giving the same good service though ten to eighteen years old—incubators my father made and sold.

Little Wonder So Many Depend on Old Trusty for Their Poultry Success

When you put good, fertile eggs in an Old Trusty, you know you are going to get a good hatch—you don't take any chances. My customers write me and tell me they wouldn't think of trying to raise chickens without my incubator. When they think of making money from poultry they naturally think of Old Trusty, because they can always depend on it to make the big hatches that make the big money. Besides the money side of it, there is a lot of satisfaction in knowing you have an incubator you can always depend on to do the work.

Have you ever read the "Ups and Downs of an Inventor?" It would do you good—cheer you on the road to success. See Page 4 of our catalog.

Get My Big New Book of Poultry Profit Helps

Then you will get all the story of Old Trusty and a lot more, too. It is a kind of guide book in making a success of raising poultry for profit. While we wrote it ourselves and printed it here in our own printshop, I believe it is the best, most practical dollar and cents book on poultry ever written up to this time. It contains the best of 29 years' experience and if there is one thing that is valuable in poultry raising, it is knowing how others have worked out their problems. It tells how to pick the layers in a flock of pullets, how to feed for the best results, when to pull off hatches to get big profits, how to choose the best breeds, what size incubator to buy and scores of other "hows" and "whens" that mean more dollars to you. Just clip out the coupon or send me your name on a postal and I'll start this big free book in the next mail. Yours truly,
Harry Johnson, "Incubator Man."

Brood Your Chicks 30 Days FREE!

**1,500 Chicks
around one stove**

Also small size stoves.
No hovers to bother
about. No gas, no
fumes, no wicks, no
smoke. All bother
and worry gone.
Losses reduced to a
minimum.

Use this wonderful new Simplex Brooder Stove in your own brooder house 30 days absolutely free. Write for free Brooder Book fully explaining offer. Try the stove under all conditions. Make any test you know of. Then, at the end of 30 days, if you are not delighted send it back and we'll cheerfully refund your money. You alone are the judge.

Turns Losses to Profits

This wonderful new brooder will raise 50 per cent more of your chicks than you have been able to raise by old-fashioned methods. No more deaths from white diarrhoea and poor ventilation. It turns the losses from dead

chicks into big profits for you. The Simplex soon pays for itself by extra money it makes.

Saves Labor and Expense The Simplex Brooder Stove means one-tenth as much work — costs one-fourth as much to operate as any other system. It is self-regulating — needs no watching — eliminates all worry. Try it 30 days free.

Send for **Free Brooder Book**

Send today for valuable book that tells how to "Increase your Profits by Decreasing Mortality" — absolutely free. It tells how to solve your brooding problems. It tells how to save the chicks that you have seen content to lose every year through disease and faulty brooding — how to make twice as much money from your poultry. Also catalogue and complete details of the wonderful Simplex Brooder Stove and our 30-day free trial offer. Sent to you absolutely free. Send today.

be hard to find many of them that had bred very many of the leading varieties which we have today; and in some of the small shows where there are only a dozen or two, or forty or fifty birds at the most, in a class, the small show could not afford to hire enough judges to go around if they should attempt to employ a specialist breeder for each variety. One judge can do all the work in most of the small shows, or two judges at the most, and to have a breeder judge for each variety would simply be impossible.

As a matter of fact it is not always the breeders of varieties that are the best judges. At least, simply breeding a variety a term of years will not make you a good judge of that particular variety. It will not if you are not a careful student and a lover of the variety.

I still believe that the real good, first-class judges we have are not made but born judges; men who are natural lovers of Standardbred fowls and who have "it in them" to become judges regardless of book training.

Of course a certain amount of knowledge of Standard requirements, etc., is absolutely necessary, but there are men who can learn the Standard by heart and still be muttonheads when it comes to judging poultry.

A poultry judge should be well paid for his work, but the good judges are not paid adequately as far as I have been able to learn. They are practically forced not to work at this profession for the money there is in it, but because they love the work. If men like Howell, Oke, Dan Young, Cosh, Drevensedt, and many others were working at the judging game for the money it brings them, they would have quit years ago and gone at something that was more remunerative financially, because these men could make much more money in other lines than they possibly could judging poultry. At least this is the way I have always figured the matter.

A Standard Disqualification

Now, here are a couple of random thoughts that I am going to tack onto this article. I recently was looking over a few of my youngest White Rock pullets, and picked up the most promising pullet I have on the home place this year. She was snowy white, with very white quills, a splendid body and back, with nicely carried tail, beautiful eye color and one of the neatest combs I have seen for a long time, and her leg color was as good as any in the flock and much better than the average ones of the flock. She was, in fact, just the kind of a pullet I have been wanting and lo! she has four or five very prominent stubs on the side of each shank.

Neither of her parents had any sign of stubs or have any of her ancestors for several generations back, but there they are, right on the pullet that I have been wanting to produce for these many years. What shall I do with her, breed from her anyway? No, I shall not; thought she might breed all right; but I do know that these things do show up in generations to come and I may still have other pullets just as good yet be free from this defect, and I shall cull this pullet for she is "down and out" by the Standard. If this were a wee bit of down between the toes it would be a different story and I would be tempted to keep her and breed her. In fact, I know that this is just what I would do, but when it is stubs, and a whole row of them on the shank, it is a different story. Down between toes is "down and out" too, as far as the Standard goes, but serious breeding defect like stubs on sides of shanks. To many breeders there may be little difference between down and stubs, but I feel that there is much difference.

Another pullet of almost as good quality is minus the first joint of the middle toe on right foot, which will knock her out from the show room, especially if I ever wanted to show her at a large show. It will not injure her for breeding, however, as the toe was injured by a horse or cow stepping on it and is really not a serious breeding defect, only it mars her a little from being "complete."

I have read many times how to cure scaly legs in chickens. If I am not mistaken Frank Platt said it was a sign of a careless poultryman or something along the line. Well, I had a bunch of chickens raised out on a farm several years ago and they were brought in in the fall and I had some scaly legs in that

Hatch with Electricity

Lectro-hatch
Electric Incubator
Element

Convert your Old Incubator into a Modern Electric

Easily installed. Steady, even heat. Needs no watching. No fumes. More and better chicks.

Why worry along with the fuss, dirt and inferior results of an oil or coal incubator, when you can so easily and so cheaply convert it into a clean, modern, dependable electric machine?

It takes but a few moments to put the Lectro-hatch Electric Incubator Element into your old machine, and there you are—ready to hatch with electricity.

Think what it means to turn an electric button and let electricity hatch your chicks in an incubator that regulates its own heat and needs no watching.

Clean, Convenient and Always Dependable

The Lectro-hatch is so clean, simple and odorless that you can keep it anywhere in your home. It has no lamp to fill, no wick to trim, no smoke, no soot, no risk of fire or explosion. It automatically regulates its own heat and needs no attention whatever, except the turning of eggs when desired.

So far as temperature is concerned, you can go away and leave it for days at a time. When you come back, the weather may have changed, the room may be cold, but the temperature in your incubator will be just exactly what it was when you left it. You adjust the Lectro-hatch to any temperature you want and it maintains that same steady, even heat all the time, until you're ready to change it or shut it off.

Bigger Hatches of Healthier Chicks

Remember, with the Lectro-hatch, there is no smoke or poisonous gas to stunt or kill the chicks in the shell. Fresh, pure air circulates constantly. There are no cold corners, no ups and downs in the temperature. The largest, most successful poultry raisers in the United States will tell you, from experience, that day-old chicks from Lectro-hatch machines have the appearance of being one week

old. They are bigger, livelier, healthier in every way. And it is not uncommon to hatch 80 to 90 percent of the fertile eggs in the Lectro-hatch.

Easy to Install, and Even Easier to Operate

We send plain and complete instructions for converting your machine into an electric. You don't have to know a single thing about electricity to install the Lectro-hatch or to run the incubator. Bore a hole and drive a few tacks—that's all there is to installing it. Turn a thumb nut until the thermometer shows just the degree you want. After that, our patented Regutroller automatically holds that temperature for you, absolutely steady and even.

Lectro-hatch Elements are made to fit any size or style of machine. They attach to any electric light socket, and operate from any kind of electric current—from farm lighting plant, traction line or town lighting systems.

Costs Very Little

The cost of a Lectro-hatch Element is small, and the expense of operating it figures about the same as for a good grade of oil. But, oh, what an enormous difference in hatching results, in cleanliness, in ease, convenience, and peace of mind.

Hatch With Electricity This Year

If you are interested in electric hatching, write us at once. We can supply either the element to convert your old machines or complete new Electric Incubators and Brooders. The same wonderful principles are in both—steady, even, dependable heat; no worry, no work, no watching, no smoke, no gas, and absolute assurance of bigger hatches and better, healthier chicks.

Investigate electric hatching—the most wonderful development in the poultry industry. Write to-day for complete information.

Electric Controller Co., 410 E. 10th St., Indianapolis, Ind.

Read What Leading Poultry Raisers Say About It.

Will Increase Lectro-hatch Capacity and Eventually Use Nothing Else.

"We are glad to say that the electric heating system installed in our Mammoth Hatchery was entirely satisfactory, the percent of hatch being very much increased and the chicks large and strong. We hope to be able to increase our Lectro-hatch capacity each year and eventually use nothing else."—PORTERFIELD HATCHERY, Richmond, Indiana.

U. R. Fishel, World's Leading White Rock Breeder, says:

"We are the first to use exclusively in our Mammoth Hatchery of 18,000 capacity, the wonder element, ELECTRICITY. Not only does this method of incubation hatch stronger chicks, but it hatches larger ones. They really look like week-old chicks as hatched by the old method of incubation." (Note: Mr. Fishel uses Lectro-hatch).—U. R. FISHEL, Fishelton Farms, Hope, Ind.

Large Commercial Hatchery Pleased with Lectro-hatch.

"The two machines we fitted with your Electric Element are working splendidly. The absolute safety in their operation, with the better hatched chicks and the elimination of all worry over regulation of temperature, regardless of weather changes, brings to the hatcher as near a perfect incubation device as seems possible. We hope shortly to install more machines fitted with your appliance."—SNOWFLAKE HATCHERY, Indianapolis, Ind.

Judge Walter C. Young, A. P. A. Judge, Supt. Moraine Farm, Dayton, O., says:

"Never have I operated a machine that holds such an even temperature, all through the hatch, as the Lectro-hatch. And the most pleasing feature of all is the size, weight and vigor of the chicks as they come out. Last year we hatched 75 percent of all fertile eggs left in the machine. One hatch in particular we brought out 83 chicks from 85 eggs."—WALTER C. YOUNG, Supt. Moraine Farm, Dayton, Ohio.

DR. HESS POULTRY PAN-A-CE-A

Universally endorsed—Universally used:—by the big 10,000 hen plants—by the average farmer with his 200 hens—by the back-yarder with only a dozen hens to consume the table scraps. Pan-a-ce-a tones up the dormant egg organs, so that the proper amount of a hen's food goes to egg-making—and not all to fat, flesh and laziness. A Pan-a-ce-a hen is always a hungry hen, an industrious hen. You can depend upon it, the healthy, hungry, scratching, singing hen is the laying hen, the paying hen.

Always buy Pan-a-ce-a according to the size of your flock. Your dealer has a package to suit. Good results guaranteed.

Packages from 25c to the 100 lb. drum, \$10.00. Except in the far West and Canada.

DR. HESS & CLARK
Ashland, Ohio

bunch and I have been pestered with it ever since. I have tried a number of, advertised remedies and also a number of home-made ones, and while I have in some cases effected a cure, or at least a partial cure, I still have it present every year. To say that it is easily cured is, mildly speaking, stretching the truth until it is liable to break.

It is not easy to cure and I have not yet found a bird that once it had that has as clean, smooth shanks as it had before they were affected. The only way to get anywhere in combating it is to keep after it all the time, which for me is pretty hard to do, as I do not have a lot of time to put on the poultry during the spring, summer and fall months. If anyone can tell me how to cure scaly legs in fowls and do it quickly and easily and permanently, I am ready to listen, and admit that I do not know it quite all.

Advance of the Single Comb White Leghorn.

(Continued from page 14)

energies to the work in hand, and if we are able to accomplish results worthy of publicity or emulation, the deeds will speak for themselves. We will state, however, that the need for a wider distribution of a knowledge of the Standard requirements of the White Leghorn has become so urgent that at the 1921 annual meeting of the Club, a committee was appointed "with full power to act" to proceed with the preparation, publication and distribution of a White Leghorn Standard. Present plans call for an edition of 100,000 copies of this Standard, and it is to be distributed free of charge.

Certain persons who, for one reason or other, oppose the publication and free distribution of standards (chiefly, it seems, because it may affect the financing of the A. P. A. by reducing the sale of their standards) have spread the idea that the National S. C. White Leghorn Club proposed to issue a standard which would conflict with that fostered by the American Poultry Association. Whether this has been done deliberately or not—the fact remains that we have never failed to emphasize our intention of adhering strictly to the ideals recognized by the American Standard of Perfection, for the present, at least. Our main idea is to give a wider distribution to the Standard as set forth by the A. P. A. Standard, changing the verbiage and form of description sufficiently to avoid infringement of copyright, and to make certain sections more easily understood by the beginner.

We wish to emphasize, at this time, the reservation made in the last paragraph, namely that we intend to adhere to the A. P. A. Standard of Perfection, "for the present."

The Committee on Standards of the American Poultry Association, more commonly referred to as the Standard Revision Committee, is now beginning to function for the preparation of the 1923 revision of the Standard. We wish to go on record, at this time, as saying that we want nothing but a square deal for the White Leghorns, and that we intend seeing that we get it. It has been believed that, in the past, the standards as finally accepted did not always represent the true conception of those on the committee who were qualified to express an opinion on some particular variety. On the contrary, it has been persistently rumored that there has been too much trading, "bickering," or "peanut politics"; that Mr. A will agree to Mr. B's desires concerning the breast color of X variety, if Mr. B will support his fight for tail carriage on Y breed—or, that Mr. C will fight Mr. D's proposal to increase leg length on Z variety unless Mr. D will support the pet hobby of Mr. C. Too much a case of "you scratch my back if you want me to scratch yours."

To what extent this has actually been indulged in, we do not know—we simply know that the White Leghorn breeders are determined that the future of their variety will not be endangered by such bickerings in the coming revision, and therefore make this statement of position in advance.

We respectfully invite the attention of the Committee on Standards to that portion of Section 110, Article XXIII, of the Constitution of the American Poultry Association,

HATCH 'EM

IN A

Buffalo Incubator

the "Perfect Hatcher"

Chas. A. Cyphers

Start the year right—save yourself the trouble and disappointment of poor hatches this season by using BUFFALO INCUBATORS—the machines that, because of their dependability, have become known as the "perfect hatcher." Whether you want a small or large capacity machine there is a BUFFALO that will exactly meet your requirements—furnished in 60, 120, 240 or 260 egg sizes.

The BUFFALO is the perfect hatcher because it has the two things necessary to successful incubation—diffusive heat and correct ventilation, producing that mellow warmth found only in BUFFALO INCUBATORS. The constant and uniform heat in this "perfect" machine is accomplished by my patented sensitive and accurate regulator. The regulator was patented by me in 1895 and has never been equaled—my later improvements have increased its efficiency and ease of operation.

The BUFFALO is built of materials that insure years and years of service—it will not swell or warp out of shape—it is constructed under my personal supervision and built according to specifications that years of continued service have proven correct. That's why I get so many letters like this one from Leroy C. Kelder of Accord, N. Y.. He says, "I am using four of your machines with entire satisfaction. One has been in use steadily for 10 years and is as good as the day I got it."

After you have hatched your chicks in a BUFFALO INCUBATOR you can further insure your profits if you

REAR 'EM

In a Buffalo "Never Out"

The BUFFALO "NEVER OUT" Oil Burning Canopy Brooder is Wickless—it burns kerosene, gasoline or distillate with the same perfect blue flame. It is odorless—does not emit fumes or smoke—will not carbonize—will not overflow—will not go out as long as there is oil in the reservoir.

The NEVER OUT OIL BURNER is in a class by itself—you can depend on it day in and day out—you need never worry lest your chicks will burn up or freeze—they are safe with a "NEVER OUT."

NEVER OUT will not flood because the inverted fount holds the oil supply below the rim of the burner well, and the throttle valve free from excess pressure, operates with a large orifice and is placed under the canopy where the oil is kept at even temperature and the flow is steady and sure.

The DEFLECTOR is an integral part of the NEVER OUT Burner—it spreads and radiates the heat to the outer edge of the canopy instead of holding it, a hot ball in the middle. That's why the NEVER OUT consumes all unburnt gases—either with

low or full flame. This spreader is specially designed for hover work and will be covered by letters patent.

A 52 in. canopy is used for economy in operation. With this large canopy a greater space is adequately heated than the same quantity of oil would warm, under a 32 or 42 in. hover. The NEVER OUT is economical for 50 chicks, 500 chicks or more. The oil consumption is very economical—it ranges from one quart of oil to one gallon in 24 hours—depending on size of flame needed under varying weather conditions—the simple double adjustment give it a wide range of flexibility.

Send your name and address and get free catalog describing in detail the many superior features of BUFFALO equipment. You'll find this season a profitable one if you decide to Hatch 'Em and Rear 'Em with BUFFALO equipment.

dealing with "Duties of Committee on Standards," and which reads:

"Where a Standard is submitted by an affiliated, and truly representative Specialty Club, the Revision Committee shall not have the power to alter or change it, except that it shall adequately protect breed type, preserve uniformity of variety characteristics, and shall edit the Standard so as to secure uniformity of technical forms and expressions."

We take this opportunity of informing said committee, also the poultry public in general, that a truly representative specialty club—the National S. C. White Leghorn Club is functioning efficiently in the preparation of a standard which will voice the sentiments of White Leghorn breeders, and said standard description and type outlines will be duly presented to the committee at the proper time.

We, the breeders of White Leghorns, wish to see the American Poultry Association prosper; we trust that the Standard Revision Committee will accomplish its purpose in making standards which will depict the ideals of the breeders of each variety; we will do anything within reason to promote such harmonious action—but: the National S. C. White Leghorn Club is built, and is functioning, upon the idea that our every effort will be to advance the interests of our variety above all else, and we shall insist upon the interests of our breeders being safeguarded to the limit, and especially in the matter of establishing the Standard requirements of the ideal White Leghorn.

Barred Rocks, Dark and Light

(Continued from page 17.)

our largest shows in the East. But the ultimate result of a few years' breeding without resorting again to fresh crosses is best expressed by the word anticlimax. I happened along the aisle when this once-prominent breeder was answering the question, "What did you get?" "Oh, nothing; I'm in the utility class now." The long and short of the problem is just this: in the Dark variety is best worked out mechanical exactness of the bars; but contrast is wanting. In the Light variety we secure the needed element of contrast. And it is by resorting to mixing of the two that we may have a happy blend of two distinct characteristics. And like many other good things in life, the best results attend the fresh mixing.

Again, it is frequently urged that the two-variety program leads to several superfluous or unnecessary matings, in this way comparing unfavorably with the one-variety plan. An absurd claim, as I will proceed to demonstrate. The two variety plan, as I will outline its breeding schedule, will standardize the actual breeding type of Light male, thus calling for but one mating to produce exhibition stock of both sexes. And as to the Dark variety, the same condition would hold but for the desire to produce more attractive females, matching the male's color tone. So we will enumerate two Dark matings and one Light—total three matings. With this manifest advantage: that with this rule of breeding the specialist in either variety would experience the need to make one mating only, or two, according to which variety chosen.

Let us now contrast this schedule with that presented by the one-variety plan of breeding—nominally one variety merely, because, as we have seen its advocates in practice, actually use the two-variety plan, offering for sale stock specifically such, and in fact offering no stock bred otherwise. Again, are they not using two matings in the production of each variety, Light and Dark? And in addition, does not the blending of these call for still another process, making five district matings as compared with one mating, two, or three all told, for the two varieties? I put this in the form of an interrogation merely. I have all a Missourian's proverbial curiosity concerning the mysteries of this one-variety business. Will the enemy come out in the open, clear the ambush, and let us into the inside facts? If they have some stock bred as one variety just as certain shows foist it upon the public, why is it not so offered for sale? And if one-variety breeding suffices, why exploit two varieties commercially? A clear and unequivocal explanation of this discrepancy between theoretical claims and accomplished facts, if forthcoming, should be spread upon the pages of this paper in 10 point double leaded, and will sell a thousand extras to the anxious public.

So much for the issue from the standpoint of the breed itself. But a still more vital consideration relates to the demands of the

THEY DIDN'T FEED ME GUARANTEED DOUBLE EGG PRODUCER

MY HEALTH WAS BAD AND I ONLY LAID 100 EGGS IN ONE YEAR.

GUARANTEED DOUBLE EGG PRODUCER

GUARANTEE DOUBLE HEALTH AND EGG PRODUCER was discovered on one of the largest breeding estates in the world. Is fed regularly to our world's famous NONESUCH FERRIS WHITE 300-egg strain Leghorns. 750 layers fed GUARANTEED DOUBLE HEALTH AND EGG PRODUCER averaged 215 eggs per hen last year. This was accomplished by feeding thoroughbred stock GUARANTEED DOUBLE HEALTH AND EGG PRODUCER, regularly. Hens must be kept in the best of health to be profitable layers. Sick hens WILL NOT LAY. During fall and winter the weather is changeable and chickens are subject to colds which bring on the deadly roup. First symptom being poor appetite and the hens refusing to lay. KEEP YOUR CHICKENS IN PERFECT HEALTH, by feeding a teaspoonful to fifty hens of GUARANTEED DOUBLE HEALTH AND EGG PRODUCER, which is an honest medicine without a filler. Must double your egg production or your money back. Send us \$1.50 for two regular \$1.50 cans. \$3.00 value for \$1.50. Special introductory offer made for a limited time only.

I WAS FED GUARANTEED DOUBLE EGG PRODUCER TO MAKE ME LAY AND LAY A NOTED SINGLE

Free Book Tells How

Hillview White Leghorns

again won a sweeping victory at the
Coliseum Show, Chicago, Dec., 1921

1, 2, 5 cock

1, 2 hen

1st old pen

1, 3, 4, 5 cockerel

1, 2, 3, 5 pullet

1, 3, 4 young pen

Best display and all specials

This undefeated line of Champion Producers of every season, has always triumphed above them all in America's largest show rooms. The exhibition supremacy of Hillview Leghorns, has been decisively demonstrated in the past by the winning of almost every ribbon for four consecutive years (1918, 1919, 1920 and 1921) at the Chicago Coliseum Show, the greatest of all the White Leghorn Shows, a performance never approached by any other strain. Hillview Leghorns win against all breeds at the Arkansas egg-laying contest finished 78 eggs ahead of nearest competitor. Won by H. C. Porter, Fayetteville, Arkansas, a customer. At the last Missouri egg-laying contest five Hillview birds hatched June 26th, layed 1096 eggs for the year. Best record over all Leghorn pens from January 1st to October 31st. 1st prize pen Missouri egg-laying contest, 1918. Official individual records: 257, 251, 263, 248, 257, 267, 240.

These official records show that Hillview strain has produced more exhibition hens with official records ranging from 200 up to 267 eggs in one year than any other strain. These performances have conclusively demonstrated that Hillview White Leghorns as a combination of exhibition and laying qualities, have no equals in America today, and that they will lay more eggs in a year than the so-called Utility kind.

Guaranteed Winners for Any Show In the Country

When we make you this offer, we mean exactly what we say, we will furnish you winning birds for any show, regardless of competition. We have them by the hundreds, and can fill orders of any size and for any show.

Cockerels for Sale

These cockerels will transmit the laying qualities of the parent stock to your female. The breeder who is anxious to improve his flocks and produce more eggs per hen will do well to purchase a few of these cockerels. We have but a few hundred and to dispose of them quickly we have priced them very low.

Booking Orders for Eggs and Baby Chicks

We suggest that you send in your order right now for delivery of 1922 eggs and chicks. During the past season many of our customers have been disappointed because we could not supply them. The breeder who wants to hatch or raise prize winners for the Shows next Fall and Winter, or for Laying Contests, should order today. Catalog and bulletin No. 61 free upon request—Write today.

breeders at large. I venture to assert that nine breeders out of ten are committed to the two-variety schedule. Exhibition policies are shaped by the popular demand. And when we see well nigh universal acceptance by show managements of the two-variety schedule, this fact speaks more eloquently than any amount of verbal argument. For years past our Barred Rock Club has contrived to overawe opposition to its bureaucratic policy, and by the hot-air route personal interest has continued to win the day against manifest popular sentiment. If better judgment does not prevail at this season's club meet it is up to the breeders to bring such influence to bear upon the Standard Revision Committee as will awaken them to the necessity of making a Barred Rock Standard to fit conditions of today.

The Present Standard.

Taking up the Standard to discuss its defects, as preliminary to suggestions for improvement, we shall notice several misstatements. One of these relates to the color of the "dark bar," specified as "stopping short of positive black." It is not difficult to surmise what the early standard-builders had in mind: which was to avoid metallic sheen. Black is the staple color. And the phrase black free from sheen carries the correct idea. Regarding what is styled in common usage, the "light bar," but more appropriately termed the field of color upon which the black bar is disposed, the Standard calls for "grayish white." Recent criticism in these columns refers to this as inappropriate. However, I will show that "grayish white" correctly expresses the color tone of the dark variety.

It has been assumed that inasmuch as the Barred type originated in loss of color upon plumage normally black, the light portions should be regarded as the bars and accordingly the black portions is the field of color. This view obtained with Prof. Pearl, who promulgated a theory of sex difference as arising in the varying capacities of the sexes to transmit this loss of color. If this theory is tenable it should dispose of the claim of the one-variety contingent that the sexes may be brought to the point of breeding to uniform color. Either this or the "double-dose" theory must go to scrap. If Barred Rock females can never transmit barring to daughters I am at a loss to explain how I once got a nice flock of barred chicks of both sexes from such mated with a White Minorca male whose ancestry I could trace back four generations as free from any Barred blood or tendencies. To be candid I don't take stock in either the "double dose" or the uniform sex-color theories.

As to which properly constitutes the field of color and which the bar, science is one thing and art another. The Standard models comprised of black lines printed upon white paper, are in keeping with our natural impression of the black bar as the visual objective and the lighter field as its necessary relief. Mr. Platt is correct in asserting the female's darker color to be "fundamental law," which nevertheless conflicts with the claim of uniform sex color. This larger secretion of the black pigment, together with the male's excess of plumage to receive his smaller allotment of pigment sufficiently accounts for his lighter color without resort to "double-dose" fallacy.

It is the tone of this ground color, or field of color, that comprises the most salient feature of distinction between the Dark and Light varieties. If the required "bluish appearance" is to continue an essential attribute of Dark plumage, "grayish whites," or better still "gray," unqualified is the proper description.

This bluish effect of the Dark plumage is a staple color feature. Let us see how it originates. The student of optics and the principles of color knows that black and white, gray and blue comprise three progressive gradations of neutral color. Black and white when finely divided, so that their integrity disappears, we term gray. But make the blending complete, as when we see the blackness of outer space through atmospheric white light, and the sensation we term blue results from a confusion of the senses. This same thing happens when the dark barred plumage comprises gray for a ground color. And in the degree that the ground color approaches white this bluish effect is lost. It becomes evident, then, that in the color tone of the field, whether gray or white we have a basis of distinctness between the Dark and Light varieties. And, further, the quality of narrowness has a modifying influence. The narrower the barring, the more bluish the effect. As blueness is a characteristic trait of the Dark variety, so do we find an equally pleasing character in the effect of contrast displayed by the Light. Narrowness here is incompatible with contrast, and we do not find it possible to get this "snappy" qual-

ity upon specimens so narrow-barred as is of late years in vogue. Before leaving this topic it should be observed that even upon specimens of the Light variety a bluish appearance is observable in subdued light. This is not to be regarded as a normal trait of light plumage. It arises also in a confusion of the color sense, the light reflected from the white field receiving an impress from the adjacent black bars, an effect which disappears in ordinary light.

Our present Barred Rock Standard in its specifications of a gray field and narrow barring excepting certain errors in technical description, describes the Dark variety. But when we consider that contrast has never found a place in Standard description by any specific wording, we see the need to so modify the text to present this requirement for the Light variety. Also, as extreme narrowness conflict with contrast, this feature must be limited in degree. By assigning blueness as the distinguishing feature of dark color and contrast as that of the light we have separate and well-defined ideals upon which to establish the distinctness of the two varieties and to formulate Standard descriptions of the same.

The breeder who is responsive to the beauty of nature must have observed how, unlike any other breed, the Barred Rock finds its prototype in the sky's daylight cloud effects. When gathering clouds preceding stormy weather take on that subtle charm arising in narrow alternating tones of lighter and darker bluish gray color, we perceive upon a grand scale the peculiar nature of dark plumage. And again, when clear weather succeeds the storm, and occasional fleecy clouds are relieved against the dark sky the resulting strong contrast symbolizes the plumage of the Light variety. These differing phases of nature appeal to man's varying moods. It is not possible to realize in one sky's aspect these dissimilar appeals to human sentiment. Neither is it possible to realize in one Barred variety all of the breed's capabilities of beauty. Beauty is the paramount objective in the fancier's manipulation of animal types, and if one generation fails to respond to consistent ideals their work is doomed to be overthrown by those who follow with finer discrimination for the artistic quality.

We have traced the natural distinctions of color between the Dark and Light Barred varieties: subdued color tones in the one yielding the effect of blueness; and the black bars of the other strongly relieved by a white field yielding the beauty of high color contrast. And the problem is before us, how to outline a Standard description which shall set forth for the Light variety its peculiar attributes of color. Its paramount feature of contrast calls for a lesser degree of narrowness than is essential for the Dark variety. Extreme narrowness does not consist with pronounced contrast save, as with the Hamburg, when large patches of plumage are given over to pure white color. Not that we need coarseness of barring. As contrast has ever been an approved element in correct barred color, following unwritten law in this respect, so the matter of width of barring for the Light variety may be left unwritten, dark traditions being presumed to have their influence to correct tendencies toward too wide barring.

We now come to the specification of comparative width of bars as regards alternating spaces of the white ground. With contrast as prime objective in the Light variety the necessity of bar to match in width the adjacent spaces is not imperative. In spite of recent reaction against a strong degree of contrast once in vogue, I realize that changes of fashion are ever occurring, and what was once admired may be again. If the barring has fine preciseness of outline, the alternating spaces may exceed the bars in width and the effect be none the less striking. So much for the light female's color.

Recognize the Light Male.

The light male's color proportions are another matter. We want to put this variety upon another footing than the dark. The dark breeding female as an exhibition specimen has no standing. But upon the other hand, her counterpart, the light breeding male, when fine as to barring, is a joy forever. His barring as to spaces may be as one to two, and in addition to presenting a noble picture of beauty he represents worth as a breeder. In this way we may safeguard the single mating idea. Bred in this manner the Light variety bids for a degree of popularity among villagers and small breeders impossible with the Dark, as the latter's mating schedule calls for two matings.

Although never a Standard requirement specifically, contrast has always filled an important role as a tradition. Until within a few years, or when the influence of dark blood began to exercise its sway in narrowing both the bar and feather, contrast had ever been an essential and even a deciding factor.

The Nests in the Cracks

and crevices and on the surfaces of walls in your poultry houses are the nests of disease germs and mites. If you don't destroy them they result in the death of your chicks, a lowering of the vitality and laying power of your grown birds, or maybe the wiping out of your flock. Destroy those profit-eating nests with

CARBOLA
The Disinfecting White Paint

which spreads healthfulness by killing disease germs, lice, mites, fly eggs, etc., and by distributing sunshine, in barn, henry and hog house. A night and day guard against roup, canker, white diarrhoea, cholera, glanders, contagious abortion and other diseases of flock or herd, and against the development of lice and mites.

Carbola enables you to paint and disinfect in one easy operation, to do the work in less than half the time required by whitewash and disinfectants. Mixed—with water—in less than five minutes. Does not spoil if left standing. Does not clog the sprayer. Does not peel or flake. Germicide, many times stronger than pure carbolic acid, makes painted surface proof against disease, lice and mites, but is harmless to the smallest chick.

Use Carbola Instead of Whitewash and Disinfectants

to increase your profits by decreasing ill-health and discomfort in herd and flock. Apply with brush or sprayer to wood, stone, brick, cement or other surfaces, or over whitewash. A gallon (a pound of the powder) covers 200 square feet. Unexcelled also as a lice powder.

Your hardware, paint, drug or seed dealer has Carbola or can get it. If not, order direct—prompt shipment by parcel post or express. Satisfaction, or money back.

10 lbs. (10 gals.) \$1.25 and postage. 20 lbs. (20 gals.) \$2.50 delivered. 50 lbs. (50 gals.) \$5.00 delivered.

HANSEN'S RUSSIAN ORLOFFS

Undefeated Champions of America. Still stand supreme, winning at the Chicago Coliseum, 1921, 1-2-3 Cocks, 1-2-3 Hens, 1-2 cockerel, 1-2-3-5 Pullet. This win at one of the World's Greatest Shows with the records made in the National and American Egg Laying Contests proves the worth of these great Cold Weather Fowls. My new 1922 booklet describing the Orloff mailed free on request. Am now booking egg orders for spring delivery.

DR. M. A. HANSEN, IMPORTER AND BREEDER, OSAGE, IOWA.

—yes, real layers

that furnish an abundance of large white eggs through a long season. Vinewood Farm Single Comb White Leghorns are right now making big profit for hundreds of satisfied customers who have followed our advice and invested in our stock. If you are looking for something better than the average write at once for our free circular. We are now booking orders for a limited number of hatching eggs and baby chicks. Big cockerel sale now on.

VINEWOOD FARM, HIGHLAND PARK, ILLINOIS.

Within a decade a strain of light-females was much in evidence whose one outstanding feature was contrast, winning upon that one merit though wanting in bodily shape and accuracy of barring. Under a standard description which puts stress upon contrast, and with recent great improvement in barring technique we may confidently expect the Light Barred Rock to enter upon a degree of popularity never yet known.

My argument is not complete without reference to the constant need of the two barred varieties as feeders of each other. I. K. Felch, in his work, "Poultry Culture," employed the term "blood feeding" to indicate the means of providing for loss of color in breeding or to correct departures from ideal type. This principle is illustrated in the "foundation stock" which breeders of today specify as comprising certain matings. The present tendency is to bring a sharper degree of contrast into exhibition specimens. Of course the enlightened do not need to be told that such improvement will come from the judicious use of the Light variety.

The argument is used that two breeding classes which may be interbred may not consistently qualify as distinct varieties: the fallacy of which claim is shown by citing the system of breeding employed by breeders of games. In the "blood feeding" of Pyles and Duck wings the highest degree of perfection in color is not had without an occasional breeding back to a Black Red sire. And yet no one disputes the right of Pyles and Duck wings to stand as distinct varieties. Our Light and Dark Barred Rocks constitute a parallel instance of the mutual need of each other as "blood feeders," which at the same time qualify, by means of differing color ideals, as distinct varieties.

It has been said that if the original color schedule of the Barred Rock male had continued in force the necessity for two varieties would have been obviated, an assertion which does not accord with fundamental breeding principles. It cannot be denied that the successive stages of development the breed has undergone required two distinct breeding classes for its successful accomplishment. The ideals of breeds are a thing of gradual growth. I believe it practicable now, however, to write a color description for our breed so comprehensive as to ideals and so complete as to need no future revising. But finality in physical type is another proposition. In this respect both utility and beauty call for changes in our present Standard description.

I have still on hand notes for suggestions as to Standard improvement, to outline which would exceed the proper limits of the present article. I would say a closing word to breeders who have long been hoping for relief from the chaotic conditions afflicting our breed. The forthcoming revised edition of the Standard, due in 1923, and in all probability judging from experience to be looked for a year or two later, we need not regard as a finality. Within a few months we should know its provisions, and if not satisfactory, the time will be ripe to organize a special club devoted to the Light variety and proceed to prepare a Standard for the same. So let us possess our souls in patience, watch how the cat will jump, and act accordingly.

Poultry Inspection.

Wisconsin has just inaugurated a movement for the inspection of hatcheries in the state. Prof. J. G. Holpin, State College of Agriculture, is father of the idea. It occurred to him that chicken men in Wisconsin ought to have some protection in the buying of young chicks. He took the plan to the Bureau of Markets and it is now receiving their full attention.

It has been a practice in some places for city men to make a business of buying cases of ungraded eggs, incubating, and then selling the day-old chicks to the farmers. This gave the farmer no protection, for the shrewd business men would sell him anything that was white and call it a White Wyandotte, White Rock, or whatever was wanted. The buyer had no comeback, for when the chick was old enough to show breed characteristics, it was too late to return the bird.

By the new plan now in operation in Wisconsin any hatchery in the state desiring it can be inspected and placed on an accredited list. Both male and female birds are rigidly inspected at these hatcheries both with regard to the breeding of the bird and appearance. Those birds passing the tests are banded.

Death of Dr. Sledd.

Dr. J. Howard Sledd, for a number of years editor of O. K. Poultry Journal, Oklahoma, passed away at his home, Forest City, Ark., November 12, 1921. Dr. Sledd was the best known poultry journalist in the South. He was a fluent writer and ideals ever seemed to precede his expressions.

Mr. Poultryman:

Do you realize that the male bird is the most important thing you have to deal with in your business.

THAT upon your breeding males rests the responsibility of the amount and size of eggs your flock will lay;

THAT the use of sires from high producing ancestry is the only guarantee of continued high production;

THAT in the sire from proven ancestry all the factors effecting egg yield in the germinal constitution are pure for high production, consequently they can only transmit high production to their offspring;

THAT these factors are also dominant over factors for low production, so that even though they may be mated with females that transmit low production the resulting

female offspring will give high average production;

THAT the average egg production of hens in the United States is far too low;

THAT economy, competition and the desire for profit demand improvement;

THAT the surest and most economical way is to use sires with trapnest records back of them;

THAT in one year, from increased egg production alone they will repay you twenty to fifty times, and in addition will give you many valuable breeders.

ALL the above statements are **FACTS** and it will pay you and pay you well to be governed accordingly in **YOUR** poultry work.

The Greatest of All Laying Strains

By our thousands of satisfied customers and our winnings year after year, for six straight years in numerous official egg-laying contests, we have proved absolutely that HOLLYWOOD has the greatest of all laying strains. This unequaled record has been made by us, not with one or two winnings in dozens of trials—up one year and down the next—but by consistently winning, year after year, in all parts of the United States, from ocean to ocean. **HIGH AVERAGE EGG PRODUCTION SHOULD BE THE GOAL OF ALL POULTRYMEN.** Let us help you reach that goal by selling you your males for 1922 breeders.

Breeding Stock and Layers For Sale

We have for sale the finest lot of Breeding Cocks, Cockerels, Hens, Pullets and Mated Pens ever offered to the American public. All of them are closely related to our contest winners.

HATCHING EGGS by the setting, by the hundred or by the thousand from linebred, pedigreed stock ranging from 200 to upwards of 300-egg trapnested records. Prices reasonable. Special pains taken with long-distance shipments. Despite large hatching capacity, are booked up for the season on baby chicks, the bulk of them going to old customers.

SOW RAPE TO Raise Poultry

Dwarf Essex Rape is the only poultry forage crop sufficiently rapid in growth to suit the poultryman and sufficiently succulent and high in green feed value to promote rapid growth of the poultry.

Sutton's Dwarf Essex Rape seed is grown in England, where by years of careful selection, the strain has been developed beyond anything known in America. It is invaluable as a green feed and as a shelter crop as well, providing needed shade for growing chicks. American poultrymen can procure from us the genuine imported seed, which will make vigorous growth and come true to the excellence of the English stock.

Write for full information on English-grown Rape seed; also Sutton's Mangels and Swede Turnips—the ideal green feed for the winter ration.

White Quill White Rocks

The 200-Egg Exhibition Strain

In the strongest competition in years at the Chicago Coliseum, December, 1921, against a line of Madison Square Garden winners my Birds won 11 regular ribbons on 15 entries, including Champion Old Pen, in the bred-to-lay class on 3 entries my Record Layers won 1st pullet, 2nd and 3rd hen.

At the Milwaukee National Show, November, 1921, in the largest class of White Rocks ever shown there on 19 entries and no pullet entry, White Quills won 13 regular ribbons, Best Display and Champion Male of the American Class, 169 cockerels in competition.

This should be convincing proof that White Quill White Rocks are topnotchers, can furnish you with very choice breeders or show birds in cocks, hens, cockerels or pullets at very reasonable prices.

Special: Exhibition bred-to-lay trios, \$15, \$25, \$35, and \$50. Pens (4 females and 1 male), \$25, \$35, \$50, and \$75. Order direct from this ad.

Book your order for Hatching Eggs and Baby Chicks now.

Adam F. Polt Dept. O. Hartford, Wis.

Contented and Active Hens Are the Layers.

(Continued from page 16.)

powdered gentian, one-quarter pound of powdered ginger, one-quarter pound of powdered salt peter, and one-half pound of powdered ferric sulphate. Mix the ingredients well, and use three tablespoonfuls to every ten quarts of dry mash. Make up moist as wanted. Use this tonic mash for about two weeks, one a day. It will work wonders.

Healthy hens in winter must have digestive systems in good running order at all times. The constipated hen is not a layer. Hens need green food

Healthy Hen! This Barred Rock hen laid continuously throughout December, and one day out in the sun on the barrel we caught her with the camera. She shows vigor.

to keep their systems in healthful condition. Sprouted oats, mangel beets, or other good source is necessary.

Charcoal added, by about 3%, to the dry mash will help to keep the digestive systems of the hens in better order during winter days.

Water, water, and then some more, good fresh water. Winter health is never there unless the flocks have constant access to fresh water. Eggs are mostly water, you know.

Force Exercise.

Health is largely a matter of feeling good, so says the hen. Her activities stimulate her blood circulation, and its circulation means a possible egg production. Make the hens exercise busily all the winter days. Feed the scratch grains in deep litter. Make them work for their greens. Healthy hens are normal hens kept normal by good care, a little thought, and common sense properly applied.

Tuberculosis.

The best way to handle tuberculosis is to keep no old hens. As a rule tuberculosis does not show so strongly in pullets. By hatching early and keeping only strong, vigorous pullets each year, you minimize the ravages of this disease.

It is important to disinfect liberally, use new ground, and get rid of all birds over one year old.

Stop Colds and Roup in Your Flocks

The wheeze of a fowl with roup or cold will surely cost you money. The chickens you buy don't bring profit, nor do wheezy, droopy, stunted fowls, make weight or eggs. Save losses—Gain profit. Use cleanest, simplest and most economical method to stop colds and roup. With

ZENDOLEUM

Disinfectant Vapor your flocks get well and stay well. Zendoleum is used and endorsed by 61 Agr. Colleges.

Dr. Koch, famous poultry expert says: "Zendoleum Vapor method has proven a positive preventive and cure of all diseases peculiar to the nose, throat and lungs of poultry. I know its merits after 3 years thorough trial."

Mating Partridge Wyandottes.

In the article under the above caption, which appeared in the December issue, two inches of type was omitted. In calling our attention to this typographical error in making up the pages, the author, Chas. E. Kraner, Ohio, sends us a copy of the matter which was left out, together with several additional thoughts on mating, as follows:

"If we study nature and thoughtfully look into the bird kingdom what do we see? We see that the males are of bright colors, while the females are of a dull color; but with our Partridge Wyandottes we want to retain the beauty in the female also. Now then, if we cater to the brighter color in the males, we will loose color in the females, and to overcome this, we must have the color in the male that we desire to have in his pullets. We cannot expect to breed a cock with a bright orange colored hackle and saddle and expect mahogany colored pullets. Although he may produce some good ones, providing he has darker blood back of him. To continue such mating is to weaken your color lines on the female side. That is why many breeders who have no trouble getting good, bright colored males have trouble with their females. Many of these breeders have been good customers of mine for years. Yet they persist in using males with orange colored hackles and saddles, expecting to get rich colored pullets from such males.

"Our experience has been different. The tone of color we expect to produce in our pullets, we must first have in their sire, and not only that, but he must be bred from a well penciled hen with good color.

"I would say the hackle and saddle of male should be blood red in color, free from black edging, but well striped; and the striping not too broad, as the black penciling of the female corresponds to the striping in the male, and if the striping is too broad, it will cause coarse penciling in females.

"Sometimes from our strongest penciled females, especially well penciled in back, we get cockerels that show a bit of penciling in saddle, generally called shafting. In reality it is not shafting, because the pencil extends beyond the shaft out into the web. The shaft of the feather is the quill and in saddle feathers that are shafted the quill is light or red nearly from top to bottom, and this is very objectionable, really one of the worst features we can have and hardest to breed out.

"Our Standard calls for mahogany or reddish brown color in females, so we must have plenty of red in the male where the Standard calls for it and in the female also. Much has been said as to shade of color or what is meant by mahogany color in the female. There is one shade that's the prettiest and that is what we want and every breeder will pick it as his choice. That is the medium shade of color. Should your females come a little lighter or darker, use males a little lighter or darker, but be careful and go little by little. Do not go to the extreme and mate very light birds to very dark birds, as it will not work. That has been one of the troubles with breeders of our buff varieties. Many had females that were too light in color and were over anxious to have them darker, so they mated them to real dark males, and the results were that nearly all the chicks were checkered or blotched in color.

"In selecting birds for a mating always be sure you know their breeding for several generations back, which is very important. This matter of pedigree reminds me of the old saying: 'When is the proper time to begin training a child?' The answer is: 'Begin with his grandparents.'

"Too many breeders buy exhibition males and do not know their breeding. Just so a male is a prize winner! I would not give a male room in my breeding pen if I didn't know his breeding, or if he did not breed good pullets.

"We cannot make a mistake if we line breed in families. That is, if we have a hen that is an exceptionally good breeder put her in a pen with her best daughters mated properly to a good male of same line.

For the rest of Mr. Kraner's article on Partridge Wyandottes, see page 1116, December issue.

Disabled Soldiers Hold Judging Contest.

PROGRESS NURSERIES
1319 Peters Ave. Troy, Ohio

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

Samuel Adams, editor of the American Fruit Grower, is being considered by President Harding as ambassador to Germany. Mr. Adams has a thorough knowledge of public affairs and is in close touch with agricultural and horticultural interests. He is sound, level headed and determined, and I feel, is exceptionally well qualified for this very important post.

Could you please give me information on how to cold storage eggs. What temperature should they be kept? Should they be ventilated? How about moisture? Would a refrigerator of one thousand dozen capacity be alright for such?

Missouri

P. W. Blunk.

Write the Department of Agriculture, Washington, D. C. The government issues a booklet on home cold storage.

For several good reasons it would be very difficult for me to put a concrete floor in the new hen-house that I want to build. I have been thinking of putting in a wooden floor with two layers of planks with a layer of roofing paper (tar) between them. I think that tar paper is supposed to be a repellent to rats and vermin. Can you tell me whether this is so or not? Is there any safe and convenient way for making charcoal out of corn cobs? Corn cobs are one of the things that I have not found of any use in the poultry house and they would be very acceptable if I could convert them into charcoal readily by means of some small burner that I might get on the market.

Maryland.

W. P. Sippel

Such a floor will be practically rat proof. Cobs may be easily converted into charcoal. Dampen the cobs and stack up in large pile. Burn slowly. I have seen this done by several western farmers who feed the charcoal to hogs and poultry.

I have an opportunity to get a farm in northern Michigan quite reasonable, but would first like to get your opinion of the section. Could poultry raising be a profitable venture there? How about markets and transportation facilities? Or do you think northern Indiana better suited. Also is the Delicious apple adaptable to the region around Shelby? Also what would be the best varieties of fruit in northern Indiana?

Indiana.

J. E. Koenig.

Fruit growing and poultry raising are profitable in northern Michigan. There are good transportation facilities, both rail, and steamship in summer. The climate is mild. The Delicious apple grows to perfection in northern Michigan, as it does in northern Indiana. Sweet cherries and apples are a big success in Michigan. I can not choose for you your future home.

C. L. Scheine of West Virginia sends me the following, which will answer, in a measure a number of inquiries I have regarding a substitute for the American chestnut trees. The article is by Prof. A. J. Legg, of the West Virginia experiment station.

I note that R. L. Watts suggests that we plant chinquapins instead of chestnuts on account of the chestnut blight. I have three small trees, the result of artificial cross of the chinquapin and Japan chestnut growing. They look as if they would do well. If the chinquapin is not subject to chestnut blight most likely these crosses are not. All of them bear nuts that are as large as the average native

chestnut and of better flavor. It seems to me that these crosses would suggest a better substitute for the chestnut than the native chinquapin. There is a very large chinquapin tree on my farm. It has been known for years as the largest tree of the kind in this whole section. The body of the tree last year measured a little more than nine feet in circumference. This tree is very old and seems to be on the decline. It does not bear as well as it used to, but what nuts it does bear are very large and of a good flavor.

Some young trees have come up about this large one and have come into bearing. They are not as large as chestnuts when they begin to bear and they bear full of nice large nuts, a single one to the burr. The whole tree more resembles the chinquapin than the chestnut. They usually bear very full of burs and the nuts mature into nice round ones.

Can you advise me which variety of plums are the late bloomers? D. J. Mackey
Kansas.

The Omaha, Wyant and Surprise are late blooming plums.

Prof. Adams of Iowa, has kindly sent me the following clipping from the Ames college bulletin. It will be of deep interest to those interested in the work of producing new varieties of strawberries:

Out of a bunch of seedling strawberries found by George Brandvig on his place near Jewell several years ago, one of them proved to be an Everbearing which has made a remarkable showing this summer in comparison with the progressive, which by the way has been the best variety since it was introduced. A very careful record of both varieties planted side by side last spring, has been kept this season up till the 17th of October. The result was the seedling yielded over 3 times as much and berries nearly twice as large as the progressive variety.

I live 12 miles from Camden, on the main line of P. R. R. and keep 500 Leghorn chickens and have very good results from them, but what I want is some good fruit trees. I have a piece of ground 50x300 feet, vacant. Please tell me how many trees I can plant and different kinds that would do well here. Don't send any apples as I have two Maiden Blush and two Delicious; I also have three Flemish Beauty pears. So divide up the space above, as I have nothing on that ground at all.

New Jersey.

On a piece of ground 300 by 50 feet you can plant about 20 apple trees. Would advise you to plant Duchess, Yellow Transparent and Henry Clay. These are compact growers. You can receive all state institution literature by addressing such institution.

I purchased 40 acres of land in Manistee county, Michigan and intend to increase this by 40 or 80 more acres in the future and my intentions are to raise poultry, fruit and some truck garden with enough live stock for my own use. What are the prospects in this line in the location mentioned—Would it pay? What breed of chickens would be the best? Egg or general purpose fowls? How is the climate there and are the winters cold and of long duration? Have a stream of water running through my place. Would you advise ducks? If so, what breed is the best for market purposes? How are the markets in this locality and which are the nearest and best shipping points? What fruit do you advise me to plant, apples, peaches, pears, cherries, plums, strawberries, grapes, raspberries, gooseberries and currants? There is an experiment station in that vicinity, could you advise me where it is?

Montana.

Yes, I am sure a combination fruit, poultry and truck farm can be made a paying proposition in the section of Mich-

Wyckoff's S. C. White Leghorns

AMERICA'S BUSINESS HEN

Remember that we are the originators, and for over 40 years specialty breeders of the justly celebrated WYCKOFF STRAIN of S. C. White Leghorns, the most prolific strain of poultry in America today. Place your orders at headquarters and make no mistake.

SPECIAL ATTENTION is directed to the fact that, almost without exception, the most successful Leghorn egg farms in the country, and those making the highest records at the greatest laying competitions in the world have been proven to be of Wyckoff foundation.

EGGS FOR HATCHING

from the most carefully selected matings. Our breeding matings for 1922 are made up with the most exceptional lot of carefully selected stock in the country, barring none. Every egg furnished will be from a grand lot of special selected birds, representing our highest quality stock in every particular. For size, strength, vigor and laying qualities, together with the true Leghorn type, they are unequaled. **POSITIVELY NO SECOND GRADE OR IMMATURE BIRDS MATED, AND NO ORDERS FILLED WITH EGGS FROM "FARMED-OUT" STOCK OR OTHER BOUGHT UP JUNK. WE ARE BREEDERS, NOT HUCKSTERS.** Place your order for some of the eggs from this famous high grade stock, and get in line with the most profitable era ever known in the poultry business. Send for free catalog giving prices and descriptions, with numerous photographic illustrations showing type of the birds and sections of this most completely equipped plant.

C. H. WYCKOFF & SON, Aurora, Cayuga County, New York

The "SUCCESSFUL" 300 Unit Hatcher

Safe—Sane Practical Hatcher

"Among the seven different makes of incubators I used last year the Successful Machines proved to give the best results" writes one user. His letter is typical of thousands which we receive telling about profits made from the "Successful."

Twenty years of experience have shown us that the smaller unit incubator produces 10%, 15%, 20% and 30% better hatches than the large capacity incubator. The 300 Unit "Successful" is the most practical for hatching chicks in large numbers.

Big Capacity—Small Space

There is a big opportunity for customs hatchers. Install large hatching capacity and sell baby chicks. Always in demand. The triple deck arrangement of the "Successful" illustrated, gives you a capacity of 900 eggs with only 12½ square feet of floor space. Yet every section of every machine is right before you for easy care of the eggs. A child can safely turn the eggs in 30 seconds or easily adjust the trays for cooling. Heated with gas if you prefer or with the SUCCESSFUL lamp as illustrated, either at a small expense. Additional sections can be added as you need them. No waiting. Shipped immediately and can be set up in 20 minutes.

Costs Less to Install

Your cost of installing a "Successful" Hatchery will run from 10c to 14c per egg capacity as compared with a cost of 17c to 30c as charged for the so-called Mammoth Incubator.

Needs No Experts

"Successful" Equipment requires no factory experts to install, expert operators or night-watchmen. This, too, is a big reason why "Successful" users make such generous profits.

Let us send you a booklet on the "Successful" giving complete details, and experiences from a few of the many enthusiastic users. It is free. Tell us too about your plans or your present equipment and we will give you the benefit of our long experience.

MACHINERY

Planet Jr.

Accurate seeding pays

Seed costs money. Labor costs money. Save both by planting with Planet Jr. seeders. Planet Jr. sows regularly, rapidly and accurately in hills or drills at proper depths in even, narrow lines. A Planet Jr. leaves no gaps—wastes no seed. Every Planet Jr. has an adjustable index with the names of the principal seeds, enabling the user quickly to change the feed to sow the different varieties.

Planet Jr. sows so evenly and straight, it makes close cultivation of standing crops quicker and safer.

All Planet Jr. Farm and Garden Implements are scientifically constructed on proved, practical lines. Send for the complete Planet Jr. catalog, showing seeders, wheel hoes, horse hoes riding cultivators, etc.

S. L. ALLEN & CO., Inc.

Dept. 94,

5th & Glenwood Avenue, Philadelphia

No. 4 Planet Jr. Combined Hill and Drill Seeder, Single Wheel Hoe and Plow. An economical, easy-working and serviceable implement for large gardens. Does most of the garden work from planting to cultivating right through the season. Built to last a lifetime.

Berries and Poultry

INTENSIVE and diversified farming makes for success in both small fruits and the poultry business. Baldwin's Fruit Growers' Guide is the best book yet published for farmers who specialize in poultry and berry growing. It gives you information on berry culture in a concise, practical form, handsomely illustrated, describing the standard varieties and everbearing strawberries, raspberries, blackberries, dewberries and grapes. It tells you how to get the biggest crop of the most delicious and finest fruit with a small outlay and little care and attention. Baldwin's experience of a third of a century and Baldwin's supremacy in the berry plant business is your guarantee of success. Poultry, eggs, luscious fruits and fresh vegetables constitute a large part of the table supply. Berries grown for market make a profitable business for the poultryman, as they come in the quieter season.

POULTRY, GARDEN AND FRUITS

make a safe and paying combination. Plant Baldwin's Berry Plants and produce healthy food. We have made a lot of changes and improvements in our Big Berry Plant Business, but we have never changed our policy of square dealing since our business was established a third of a century ago. Ours is a live-and-help-to-live policy. This principle was established by my father, by and through which we hope to hand it down to our growing up sons as untarnished as we found it. It is more than a business with us. It is a life, a service. We treat every order received through the mails just as we would treat you personally if you drove to our packing house for your plants. We sell plants by their true name; free from disease; freshly dug from our new ground for your order. Heavily rooted. Packed and shipped in the most approved manner to reach you in good condition at planting time. We have millions of plants, but the sure way to get them is to order early. Late orders may be too late. Get our Berry Book, a valuable Fruit Growers' Guide. Save a day. Write tonight.

**290 EGGS
IN ONE YEAR**

igan you name. In fact, there are many such farms now being conducted successfully in that section. The climate is not severe, being tempered by the lake water. Advise you to plant Delicious, Northern Spy, King David, and Grimes Golden apples. Raspberries and blackberries do well there. Be sure to plant Fay and Red Cross currants, also Oregon Champion gooseberries. Do not attempt to do much with ducks. A few geese would be profitable. The state experiment station at Lansing will give you all desired information. Would not plant peach or pear trees for commercial purposes. Cannot advise you which breed of fowls you should decide upon as you do not state whether you wish to produce eggs or market fowls.

In reply to J. H. Thomas, of Maryland: The Cullasaga apple is a seedling found on a farm in Macon county, North Carolina. The tree is said to be more than 100 years old. The apple is a fall product, red, and of fairly good quality. Do not plant many trees of this variety. For winter apples plant Delicious, Golden Delicious, Stagman and King David.

The Golden Delicious are found on the farm of J. H. Mullen, in West Virginia, not far from the spot where the original Grimes Golden tree was found growing.

Today (December 6) Delicious apples are selling in Fort Wayne (and other cities), at 6 to 10 cents each, and the demand is greater than the supply. It is the high quality fruit which always pays the grower. Why will orchardists continue to plant varieties of inferior worth?

We have a number of inquiries from men and women who are planning to plant orchards next spring. The following will answer their questions and should be carefully read by all prospective planters. It is from Stark Bros' year book:

In planting by the square plan, the ends and sides of the field are staked off at intervals equal to distance between trees. Then, deep furrows should be plowed from stakes on one end to corresponding stakes on the other end. Then, plow furrows across the field between corresponding stakes on the sides. Wherever the furrows intersect is the position for a tree. This saves time by helping to dig the holes. To assist the man with the plow, stakes should be set in line between the end stakes. By sighting along these stakes the line can be kept fairly straight.

Another method especially applicable to small orchards is the wire method. Stakes are set on opposite ends of the field at intervals equal to distance between rows, beginning at the desired distance from the fence, usually 15 to 20 feet. Then a wire is stretched across the field between corresponding stakes. The wire can be marked by pieces of small wire wrapped and soldered to prevent slipping—these markers to be at intervals along the wire equal to the distance between trees. Set stakes at point indicated by the markers. After staking one row move to the next, and so on. Planting distance will vary in different localities and under different climatic and soil conditions. Some varieties should be planted closer than others. Orchards on very strong soil should be slightly farther apart than on medium soil. If the orchardist wishes to set trees closer than we advise, he can do so, if he will keep trees well pruned in.

Proper distances to plant are as follows:
Apple: 24 to 33 ft. apart. We advise 30 feet as being the most satisfactory.

Apricot: 16 to 20 feet apart.

Asparagus: 1 to 2 feet between plants, in rows 3 to 3½ feet apart.

Blackberries: 3 to 4 feet between plants, in rows 6 to 8 feet apart.

Cherry: (Sour sorts) 16 to 20 feet apart.

Cherry: (Sweet sorts) 20 to 27 feet apart.

Currant: 4 feet between plants, in rows 5 feet apart.

More Than 40,000 Men and Women Now Know the Secrets of Poultry Profits!

IN every community there are people making big money with poultry. Some of your friends may be numbered among these "lucky" folks. But are they lucky? Poultry raising isn't a gamble—it's a business just like any other business. It isn't luck. Real success with poultry means having a thorough knowledge of what to do and what *not* to do. There are simple rules to guide you—simple, easy-to-understand methods to win success. If you know these methods and use them, poultry profits naturally follow.

Eggs Are High; Feed Is Cheap; Make Money NOW!

Eggs are high now — they are going higher. Feed was never cheaper and probably will never be as cheap for a long time. Any man or woman with even a little plot of ground—just a small back yard, for instance, can make splendid money with a flock of hens. Remember, "a family of five can live on the work of fifty-four hens," according to the testimony of a practical poultry raiser be-

fore the U. S. Commission on Unemployment. Mrs. H. A. Hume of Kansas made \$2,000.00 with her hens in 12 months' time by applying methods developed by Prof. T. E. Quisenberry, America's well known Poultry Authority and Dean of the American Poultry School. Thousands are reaping big profits by following these simple instructions. Now is the time to cash-in. You, too, have the same opportunity.

Which do you want?

**This
or
This**

Know the Facts

Don't guess! Don't go by hearsay—do as others are doing—then success is certain. There is nothing hard about poultry raising. Anyone who will follow definite rules, that are all so very simple, can capitalize the back yard and make enough profit to pay the grocery bills and have ample left for other expenses and some to bank.

Get More Eggs

Treble Poultry Profits Quick

Which Kind Are You Keeping?

Don't bother with non-productive hens! Cull out the "boarders." Keep only good layers. Free Book Tells How.

T. E. Quisenberry positively guarantees to practically double egg yield of the average flock. All you have to do is to follow the simple methods outlined in his New Free Book.

Prof. Quisenberry will give you the secrets of successful Poultry raising and will guarantee absolute satisfaction. He has taught thousands of others—he can teach you. The information given through this poultry course covers every phase of poultry culture. And it is all so wonderfully interesting, so fascinating, so remarkably simple. Thousands of others have put his methods to the test and all agree that his methods are the greatest revelation in the history of the poultry business. You risk nothing. The Free Book is sent without obligating you in any way.

Hens Fed and Selected the Quisenberry Way Lay From 200 to 304 Eggs Per Year

What You Get: The complete course outlined in the Free Book shows you how to build practical and inexpensive poultry houses—how to feed for big egg and meat production—how to treat and prevent poultry disease—how to save baby chicks—how to prevent death in the shell—how to save on poultry feeds—how to dress and market—how to get winter eggs and spring broilers—how to show and judge poultry, etc., etc.

Eggs High—Feed Low Eggs are selling for money making profits this year, and are going higher. Feed has been the cheapest ever known. Those who know how will continue to make big profits. Never before has a dozen eggs bought so many pounds of feed as today. This makes egg production the most profitable in many years. Use proper methods and avoid mistakes by knowing methods that insure your success.

For Beginners and Experts

The methods offered are especially designed to meet the needs of owners of home or farm flocks, or side-line plants, of commercial poultrymen and breeders of fancy stock, or of exclusive poultry specialists, fanciers and judges.

Easy to Follow Every subject, regardless of its extent, is thoroughly practical and reliable, since it is based upon past and present experiences and best practices followed the world over. There is always an opportunity in any line of business for the man or woman who knows, and the poultry business is no exception.

FREE Poultry Book

96 Pages of Money Making Secrets

T. E. QUISENBERRY—the famous poultry authority, whose new book, "Dollars and Sense in the Poultry Business," is offered Free to readers of this paper. He is recognized as the exponent of simple, practical methods that never fail in poultry raising.

This Book Completely Outlines Methods That Guarantee Success—

All the secrets that tell you how to get big winter egg production and how to cull out the loafers are given in this remarkable book. Nothing like it ever published before—this book is a real guide to poultry knowledge.

Thousands of persons everywhere—experienced poultry raisers and beginners find "Dollars and Sense in the Poultry Business" invaluable. And it's no wonder—all Prof. Quisenberry's practical experience is within its covers—condensed and made easy to follow.

Here Are A Few of the Chapters—

A poultry authority of world-wide fame shows you all the "ins" and "outs" of profitable poultry raising. Prof. Quisenberry was Director of the Great American Egg-Laying Contest, had charge of the Missouri State Poultry Experimental station as well as the Poultry Division of the great Panama-Pacific Exposition. Here are a few of the chapters covered in this 96-page book:

How to get big egg yields in cold weather.
How to tell good layers without using trap nests.
How to tell drones, slackers and poor layers.
How to tell the sex of an egg before setting.
How to tell the sex of a chick when first hatched.
How to start and feed your chicks successfully.
How to avoid white diarrhoea and bowel trouble.
How to tell your best breeding birds.
How to avoid dead chicks in the shell.
How to insure quick and strong growth.
How to avoid crooked breast bones and back.
How to tell if an egg is fertilized.
How to cull the money losing glutton hens out of your flocks.

How to prevent baby chicks from toe picking.

How to rid flocks of the deadly intestinal worms.
How to prevent all chick disease.
How to feed chicks from start to finish.
How to educate chicks to roost.
How to prevent males from fighting.
How to save feed and get more eggs.
How to proportion feed so hens double egg yields.
How to feed capons or market birds.
How to cut spurs of male birds.
How to prevent hawks from killing chicks.
How to tell you hundreds of other poultry secrets you should know.
Etc., etc.

25 Years Experience Back of These Secrets!

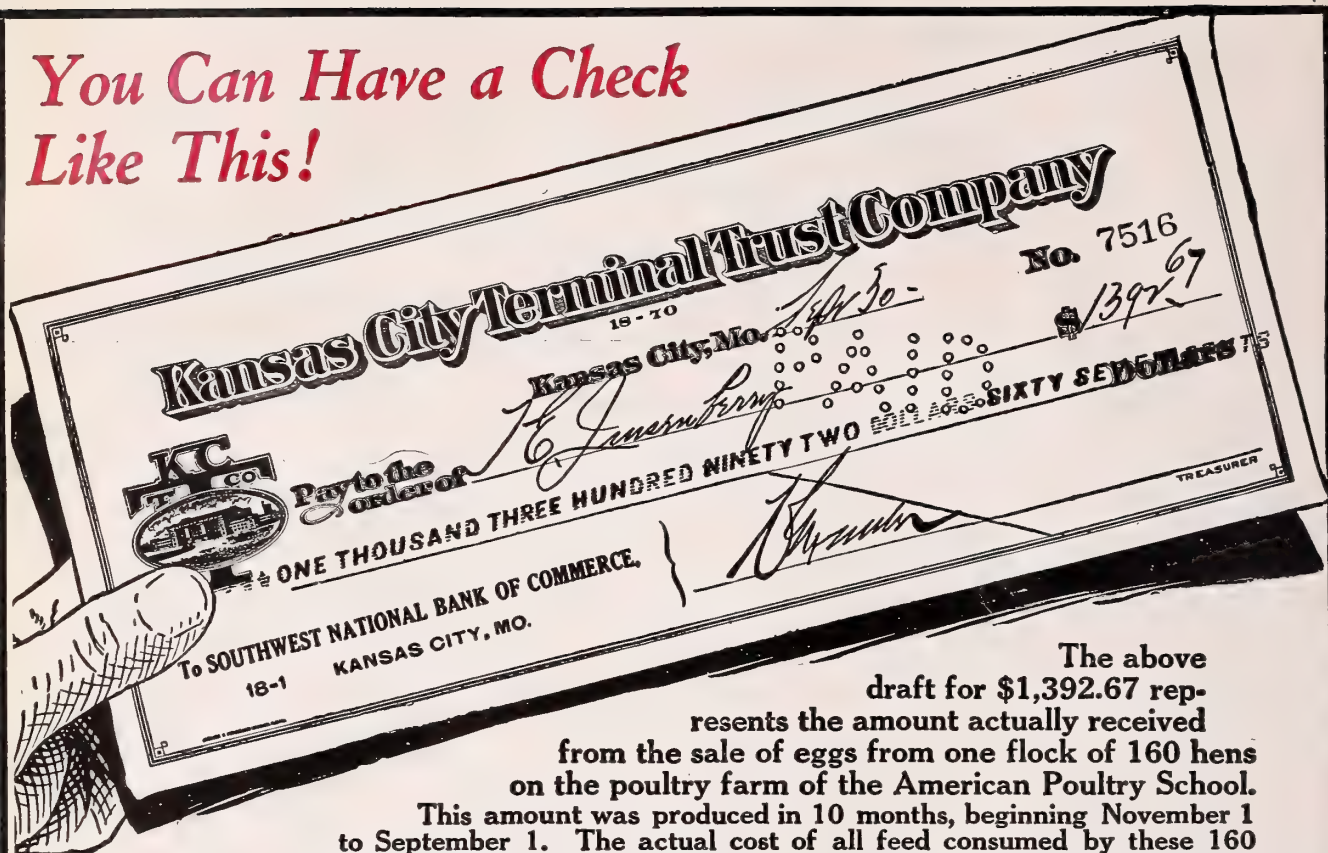

Every method—every suggestion—is practical. Prof. Quisenberry has successfully controlled large flocks on large farms and specialty poultry farms. He has directed the production of enormous quantities of table eggs and poultry. He has bred and exhibited prize stock. He has solved the problems of the back yard poultry raiser with the same skill and expert knowledge that he employs in handling the biggest problems.

Read This "Your methods are wonderful. I would not take \$100.00 for the information you have given me. I sold \$350 worth of eggs from 35 hens. I raised 250 pullets in addition that are now laying."
MRS. CHARLES ROOKS, (Ohio).

You Can Have a Check Like This!

The above draft for \$1,392.67 represents the amount actually received from the sale of eggs from one flock of 160 hens on the poultry farm of the American Poultry School. This amount was produced in 10 months, beginning November 1 to September 1. The actual cost of all feed consumed by these 160 hens in the 10 months was \$416, which left a net profit over feed cost of \$976.67 for the period of 10 months.

A Profit of \$6.10 A Hen This left a profit of over \$6.10 per hen for ten months, including the three coldest winter months and the three hottest summer months. This is positive proof that 200, 500 or a flock of a thousand or more hens, if properly housed and cared for, and if fed properly, will make any man or woman, any family, a comfortable living and a good big profit. The feeds which we recommend are those which can be obtained on any farm or from any feed dealer. But it matters not how much experience you have had, there are hundreds of facts outlined in this book that you will get in no other school nor find in any other literature.

Make The Start Today Every method which this book gives is practical information which you can put into immediate practice. The loss of a single brooder of chickens, the destruction of a single incubator of eggs, the waste of feed, shortage in winter egg production, improper mating, death from disease of only a few fowls, unnecessary waste of labor, faults in housing—any one of the numerous mistakes which you are almost certain to make in the course of a single season, can be avoided.

There is no reason to waste time, work and money when you can be sure. T. E. Quisenberry, America's Poultry Wizard, guarantees your success. Use the coupon below and mail for Free Book at once.

Send for 96 Page FREE BOOK Today!

Sending for Prof. Quisenberry's newest book does not obligate you in any way. The book is sent gratis—it's a gift to you that will point the way to permanent poultry success during 1922 and the years to follow. You'll be enthusiastic as you realize what the information outlined will mean to you.

Greater Success!

Your book started me on the road to poultry success. Since following your methods I have had no failures with my young chickens.

L. B. Vincent (Fla.).

55 Hens Clear \$275.34!

I kept 55 hens as a side line and have cleared \$275.34 in net cash during the year just ended. I am going in with more hens and expect to do even better, thanks to your methods. G. Marshall (Nebr.)

Three Times More Eggs!

Your book and the methods it outlines sure did work wonders even in coldest weather. I am getting three times more eggs in December than I ever did.

T. Crowe (New York).

American Poultry School
Dept. 2066 KANSAS CITY, MO.

Gooseberries: 4 feet between plants in rows 5 feet apart.

Grape: 8 to 12 feet apart, or 8 feet apart in the row, with rows 10 to 12 feet apart.

Hedge Plants: 1 to 2 feet apart. (To get a thick hedge quickly, plant two rows 10 inches apart, with plants alternating—that is, no two plants opposite.)

Mulberries: 22 to 28 feet apart.

Pecan: 35 to 40 feet apart.

Peach: 16 to 20 feet apart.

Pear (Standard): 20 to 27 feet apart.

Pear dwarf: 10-16 feet apart.

Plum: 15 to 20 feet apart. (On rich soil Japanese sorts should be planted at least 20 feet apart.)

Quince: 10 to 16 feet apart.

Raspberries: (Black) 3 feet between the plants, in rows 6 to 8 feet apart.

Raspberries: (Red) 3 feet between the plants, in rows 5 to 6 feet apart.

Rhubarb: 3 feet between plants, in rows 4 feet apart.

Roses: 2 to 3½ feet apart.

Walnut: 35 to 40 feet apart.

Pollination. Do not plant solid blocks of a single variety. In order to assure cross-pollination of the blossoms do not plant more than four rows of any one variety in a solid block—that is, plant four rows of one variety, then four rows of another variety, etc.

In answer to C. C. Holtzman, Wisconsin: The Champion is a very hardy apple. It is of only fair quality. Its strong point is its keeping qualities. It was found growing as a chance seedling in Missouri about 34 years ago. It is profitable to growers in Missouri, where it was and is being largely planted.

The Henry Clay is the earliest of all apples. It was originated in Kentucky. It resembles the Maiden Blush, but is two months earlier. It is extremely hardy everywhere apples can be grown. I have trees of it in Iowa that have withstood 37 degrees below zero. Champion, Delicious and Golden Delicious came through that winter unharmed. All other varieties were more or less injured.

In my opinion the present boom in pear tree planting is a mistake. In only a comparatively few sections of the country can pears be raised at a profit, commercially. The blight prevents the grower from realizing a profit. When it can be successfully grown the pear is very profitable.

There never was a time when the future looked better for the fruit grower, especially the apple grower, than it does today. The whole world is wanting apples of high quality. The European market is again open. I want to strongly urge every reader of the American Poultry Journal who owns a piece of land suitable for apple trees to plant such trees next spring. There should be apple or plum trees in every poultry yard.

Farm Poultry Flocks

Poultry keeping on the farm affords unlimited opportunities, and the more enterprising farmers are realizing this fact, and stocking their yards with high-grade stock under systematic management. The old-fashioned barn-yard flock was picturesque, and its multi-colored members lent an additional charm to the surroundings, yet there are many pure breeds that would grace the loveliest landscapes and yield the utmost satisfaction materially as well as artistically.

Prolapse of Oviduct.

Some times the oviduct of a laying pullet turns out. In this case the bird should be given plenty of green food, and easily digested food such as bread and milk, and it should be removed from all other specimens. Some times a bird completely recovers. For internal medication give all the pullets a level teaspoonful of Epsom salts; 1 pound to 100 birds.

If there is an egg broken in the oviduct death usually follows in from three days to two weeks.

Monthly Prize Article Contest

American Poultry Journal pays \$4 and \$3, respectively, for the two best articles sent in each month on poultry subjects. Choice of subject is not limited. The articles need not be lengthy. Helpful suggestions based on the writer's experience afford the basis for awarding the monthly prizes. Photos or drawings for illustrations will be welcome when available. Articles may be mailed any time during the month. Write your name and address at top of first page and the words "A. P. J. Monthly Contest." Write article on only one side of the paper.

THE ARTIFICIAL HEN.

First Prize Article.

The artificial hen is the essential basis of successful poultry culture on anything like an extensive scale. It is necessary to the poultryman who would control his business whether raising chickens for the market or the show room. It is true that the natural hen will become broody and sit and hatch chickens but this condition does not obtain as early as we like so to make headway in hatching and starting off the new crop of chickens in time to make them most profitable and to get enough of them growing to get the best returns from poultry raising we must invoke the aid of the artificial hen.

In the way of heating there are two kinds of incubators the hot air and the hot water machine. I am not prepared to say which style is the better if there is really any preference for on our farm we have had about equal success with each kind. Some of our neighbors prefer the hot air and some the hot water heated machine. Anyway the main thing is to get an incubator and get busy and the best time to do that is now. Our experience and observation are that either the hot air or the hot water machine is a very valuable addition to the poultry fixtures and necessities that will give satisfactory results when the directions that accompany the machine are carefully followed and is worth a great deal more than it costs other things being equal.

It is essential that the machine distribute an even current of warm fresh air throughout the entire hatching chamber. Where the egg ray is lower in the center it will be found that the center of the machine is warmer than the outside and the low center is made to counteract the effect. If the slope is correct for a warm room it will be wrong for a cold room. The result is a compromise with more or less faulty heat distribution. When flat trays are used it will be found that the eggs are more easily turned the rows of eggs along one side can be removed and the tray tilted a little. This will cause the eggs in the tray to roll and fill the space left vacant by the removal of the eggs from the tray. The eggs first taken from the tray can then be returned to the other side of the tray. This is a simple way of turning eggs and saves lots of time. Where the center of the tray is lower than the sides this form of turning cannot very well be done and a slower form of turning will have to be adopted.

Best hatches are obtained when the incubator is placed where there is only a minimum change in temperature and where the wind cannot blow on it—in other words in a place as quiet and secluded as possible. On our farm we have an incubator house of concrete built above ground and we

always have satisfactory hatches. A dry cellar is a good place and so is an upper room where there is no fanning in and out during the day.

To be successful with either artificial or natural incubation it is extremely important to look to the vitality of the fowls from which eggs for hatching are obtained. If male or female are deficient in any way or unable to perform natural functions the eggs will not hatch. It does not pay to put eggs of a doubtful quality in any respect in any kind of an artificial hatcher and imagine the machine will pull them through for as a usual thing it does not for it cannot restore lost vitality. The safest way is to know the fowls that produce the eggs. Never, never would I incubate eggs from stock having mixed blood. The only kind of eggs we use are those obtained from purebred stock well nourished well cared for and properly mated.

During a layer's pullet year she will usually lay one-fourth more eggs than any year following and for this reason we only use eggs from hens one year old. Their vitality is not taxed as severely as that of pullets and the germ in the egg is stronger and produces a more healthy chick. The eggs we select for incubation are medium in size and uniform in shape color and texture of shell. The growing embryo must not be improperly imprisoned and for this reason the color and texture of shell have less to do with the hatchability of eggs than the shape. Eggs which have smooth shells hatch more readily than eggs with rough shells which are uneven in thickness.

Washing eggs removes the delicate film over the shell and causes undesirable evaporation of moisture within. For this reason we never use washed eggs for hatching purposes. Eggs kept for any length of time should be turned each day to prevent the yolk from settling to the shell. If eggs, the yolks of which have settled to the shell, are placed in an incubator the results will be a lot of crippled or deformed chicks. We do not use any other than newly laid eggs. When the eggs have been carefully selected we place them in the tray at an angle of about 20 degrees, standing them on their small end. Standing the eggs on their small ends has a tendency to develop the air cell in the proper place which is the large end of the egg. This also starts the embryo where it is the safest from accidents.

Before putting any eggs into the incubator we run it about 24 hours so as to get the temperature properly regulated. In doing this we follow closely the directions of the manufacturer. When the temperature is thus regulated there is little difficulty in maintaining the proper degree of heat. The first week of incubation the machine is run at a temperature of 102½ degrees F. and an average humidity

CONKEY-NORWICH CHICK FEEDERS

THE thousands of users of these perfect chick feeders often express wonder at the marvelous results they give. The explanation is simple:—

Chicks are most susceptible to bowel disorders, which are due to intestinal germs. Droppings of one sick chick in food or water supply infect the whole brood and heavy loss is sure to follow.

Conkey-Norwich Chick Feeders *positively prevent all contamination* and the healthy chicks remain healthy—and grow.

For this single reason alone it will pay you to use Conkey-Norwich Chick Feeders. But consider additional advantages:—Large feeding space—no

crowding—no chicks hung or stuck in openings—no drowning in milk or water. Always clean to handle because chicks cannot roost on wire guard. Feed, water or milk always available, yet always protected and none wasted. Easy to fill and clean. Rain guard permits use on open range. Simple—practical—inexpensive—durable—made of heavy galvanized metal—highest quality workmanship.

Conkey-Norwich Chick Feeders are used and strongly recommended by such authorities as Prof. T. E. Quisenberry, Prof. Harry R. Lewis, Mr. U. R. Fishel, Pennsylvania Poultry Farms and a host of others.

Order a supply of these feeders *now*, have them ready when your first brood is hatched. An early-season test will show you how to grow more chicks this year. Get the Conkey-Norwich from your local dealer or order direct. See prices below. Descriptive circular mailed free on request.

The DETROIT Ready to Use

of about 60 per cent. Great care is exercised not to allow the incubator to go above this temperature as the heat would very likely kill some of the germs. After the first week we gradually raise the temperature to 103 degrees, where it is allowed to remain until the chicks begin to hatch. Once the chicks begin to hatch we allow the temperature to vary between 103 and 104½ degrees. The increased heat outside will cause the chicks to break through the shell.

We leave the eggs standing on their small end in the incubator for about 72 hours; after this they are turned twice each day. In a double tray machine the trays are changed from side to side in the morning and end to end in the evening. This is continued above. This form of turning lubricates the inside of the shell and keeps the chicks from adhering to the membrane and becoming crippled. Beginning on the seventh day at the morning turning the eggs are left out to cool until the temperature is reduced equal to that of a normal man's eye; that is when we think the eggs have cooled enough we hold two or three to our eyelid and if they feel warm the eggs are left out a little longer. When we find the eggs are neither hot nor cold we replace them in the machine.

Cooling and airing eggs should not be confused with one another. We cool the eggs once a day in the morning so we have a chance to regulate the temperature throughout the day. Airing in a good incubator should go on 24 hours each day. This is to furnish a sufficient amount of oxygen to the growing and breathing embryos through the porous shells.

The moisture problem and ventilation are closely connected. After the first week the hydrometer is kept at about 55 per cent. We fill and clean the lamps immediately after the first turning and cooling of the eggs. This is to prevent any oil from the lamp getting on the eggs, which would close the pores in the shell and result in the death of the unhatched chick. We keep the lamps from smoking by cleaning the wire gauze with a toothbrush.

The eggs are tested on the 7th and 14th days. We place two trays in front of us, one empty and one with the eggs to be tested. As the eggs are tested they are placed in the empty tray, all bad ones being laid to one side and the infertile ones are placed in a box and later cooked for feed for the downy chicks.

At the time of the hatching a hen sweats heavily and swells out her feathers, giving added moisture and for this reason the humidity in the incubator is raised to 60 per cent. This added moisture softens the membrane and shell and prevents them from sticking to the chick.

When we first notice the first egg pipped we close the incubator until the hatching is over. Just before leaving the shell the chick absorbs the yolk in the egg through the navel cord. This furnishes the youngsters with a sufficient amount of nourishment to last them 24 hours and we offer no feed during that time.

After the chicks have been taken from the incubator and dried in the

drying box they are ready for the brooder. It requires three or four hours for them to dry after they leave the shell. The temperature of the sleeping compartment of the brooder is kept at about 90 degrees during the first three or four days. We take the temperature about half way between the floor and the top of the brooder. At the end of four days the heat is decreased gradually until the chicks are three weeks old when a temperature of 70 degrees at night is sufficient. The sleeping compartment of the brooder is heated from the center by a lamp which is encircled by wire to prevent the chicks from coming too near the lamp. After a week or ten days we let the chicks come outside the brooder in a small yard but always get them back into the brooder early in the evening. This is done only, of course, when the weather will permit. If this is taught to them for two or three days, they will soon learn to take care of themselves in that respect.

The food we give the chicks the first two days in the brooder is equal parts of chopped hard boiled eggs with shells and bread crumbs. After this we feed coarse oat meal mixed with skim milk. In addition to this the chicks receive some bruised wheat. Chicks very quickly learn to eat, particularly anything white or light colored.

Of course they get plenty of fresh, clean water to drink and the drinking receptacles are well cleaned with boiling water once a day. Cleanliness at all times and in all things is a feature of the utmost importance in raising chicks successfully.

Illinois. M. E. Underwood.

TRAPNESTING. Second Prize Article.

The person who has one hundred hens, more or less, and whose time is mostly taken up with some other occupation thinks of trapnesting as an impossibility, and we would agree with him if it were necessary to let each hen out of the nest every time she layed an egg. However, we will all agree that to make chicken raising the most profitable we must have the best possible stock that we can get and that we must see to it that each fall finds us with better pullets than the year before. And how can we do this without trapnesting? Some say that by culling by some certain method the same result is obtained, but I have yet the man to find who can even make a close guess as to how many eggs a pullet will lay. The only sure way to select your breeding stock is to know just what each individual hen will do. To do this you must trapnest, and for the most of us, we must find some method whereby trapnesting is made easier and will not take so much of our time. Let me tell you the way we do it and have found the method successful.

In the first place we found that a chicken very seldom goes into a nest unless for the purpose of laying. Then came the idea that if we have our chicken house divided into two pens and no way for the hens to get from one pen to the other except by going through the trapnests, and if we have all of the hens in the same pen in the

Your Hens Will Lay or We Will Pay —

R. E. SANDY

Box A

STUARTS DRAFT, VA.

morning, those which we find in the other pen in the evening are the ones that have layed the eggs. So we set to work and divided our chicken house in two parts. The house is 20x30 and faces south. The roosts are all along the back side of the house, or in the north part of the house. We separated the roosts from the rest of the house with wire netting, making the part containing the roosts 8x30 and the other part, which is the scratching pen 12x30. The nests form a part of the partition between the two parts.

In the morning I throw the scratch grain in the scratching pen, then see that all of the hens are on the scratching pen side and close the doors between the parts. Then during the day whenever either my wife or I (she is just as interested as I am) are near the chicken house, we go in and take down the numbers of the hens that are on the roost side of the house and let them back into the other pen again. In the evening we tear the sheet from the pad which is hanging in a handy place on the side of the trapnests, and on which we have entered the numbers during the day and take it to the house and register the numbers on our records. If we have taken down seventy numbers during the day, you may be almost sure that we have gathered seventy eggs in the egg basket. In the fall it happens once in a while that a pullet which has not yet started laying will, in looking for a nest, go into the trapnests once or twice before she lays, but after we get them all started once we do not have any more trouble.

In the summer when the chickens are outside, we have an outside pen opening out of the roost side of the house so that those who lay are not shut in the house until we let them out, but can go into this outside inclosure until such time as they are liberated. In the winter time when they are in the house all of the time we have a small scratching place in the roost part of the house so that they can go to work if they want to as soon as they have layed. At all times we keep mash and water on both sides, and if necessary we can go away and leave them to themselves all day and in the evening be able to get a perfect record of all eggs layed.

In this way when it comes time for breeding in the spring we know exactly which hens are the best producers and we put them in a pen by themselves with our best rooster. This pen is made by dividing our house again, only this time the other way so as to give them part of the roosts and part of the scratching pen. In fact, they are in the same quarters as before except that they must now stay in the one end of the house. There is quite an advantage in this, as it is always best not to move chickens out of their accustomed quarters.

If at this time you can find time to trapnest by the method of letting them out of the nest when they have layed, you can do so by putting trap doors on the back of your nests, so that you will know which hen lays each individual egg. In this way you can get pedigreed chicks from your eggs. If you do not have the time nor inclination to do this you will still know that you are getting your breeding eggs

MARCY FARMS *Jersey Black Giants* The Largest Domestic Fowl

The new-old breed which is creating such a sensation. New to fanciers, who are now refining and perfecting it. Old to the farmers of New Jersey, who for a half-century have been using these big, black, yellow-skinned birds to produce the finest table poultry in America, the famed "Philadelphia chickens."

Big, but not clumsy. Beautiful, but lacking in "fancy frills." Best for producing big, yellow-skinned, full-breasted table fowls because of real quality and astonishingly rapid growth.

Excellent layers of brown-shelled eggs of uniformly good size. Above all, rugged, vigorous and husky because they have been grown that way for fifty years.

We were, we believe, the first to begin the work of improving this remarkable breed. In six years we have well established the proper type and our birds have won leading prizes in the big eastern shows, as the Garden, Boston, Syracuse, Trenton, Hagerstown and Allentown. There is still work to be done in refinement of minor points, but this is comparatively easy and will be quickly accomplished. The "boom" is on—the result of real merit.

Marcy Farms is the recognized headquarters for Jersey Black Giants, the home of the choice specimens of the breed. We offer—at prices you can well afford—Breeding Stock, Baby Chicks and Hatching Eggs. Poultrymen in America and abroad who recognize a good thing are already placing heavy advance orders for Marcy Farms Giants. We advise you to investigate at once.

NEW DORP HEIGHTS, Box A, STATEN ISLAND, NEW YORK

from the very best stock that you have.

Now a word as to the trap-nests. These are very easily made. I have thirty of them in a space 5 ft. by 6 ft., each nest being one foot square and two feet long. A door swinging from the top of each nest which will push in but not back will do the trick. Cut an inverted V-shaped notch in the bottom of the door so that they can put their heads inside and they will not be long in pushing it the rest of the way. The back end has nothing but a six-inch board on the bottom of each row of nests to hold the nesting material from falling out.

Kansas. J. M. Ho'sommer.

Waterfowl at Chicago Coliseum.

By Oscar Grow.

Even the old timers agreed there had never before been assembled in the United States such a display of waterfowl, both numbers and quality. This resulted in such keen competition that many of the veterans who had heretofore been monopolizing all the blue ribbons were compelled to divide honors with less known exhibitors showing waterfowl for the first time.

The co-operation given the Waterfowl Breeders' Association by Secretary Hewes was the chief factor in bringing out such a record-breaking entry. Not only did the ducks and geese occupy one of the most conspicuous positions in the entire show but they were given special care by the attendants in the shape of frequent waterings in large-capacity cups and whole grain in place of scratch feed to eat. The result was all the waterfowl were in excellent condition at the end of the week and the exhibitors were most enthusiastic over the treatment received.

Toulouse geese were out in large numbers, and their size and type proved a revelation. With very few exceptions even in the young class of this breed the entries displayed the much sought for long, straight keels, and pendulous dewlaps, while the color was exceptional.

There was likewise some wonderful specimens of Embdens and Africans, although the entries in these classes were not as heavy as in the Toulouse; quality was of an equally high order; in fact, the equal of that shown anywhere in the United States.

Ducks were well represented in Mallards, Pekins, Buffs and Rouens. There were many beautiful Mallards and a small but high class entry of Buffs; the real strength of the duck exhibit, however, lay in the Pekin and Rouen classes. While competition was very hot in both these alleys, it was especially so among the Rouens, the size, type and color having never before been equalled. This breed of ducks is rapidly forging to the front and if the type and color shown here is maintained their future is assured.

Barred Rock Breeders Meet

The American Barred Plymouth Rock Club held a meeting during the Coliseum show. About 35 breeders were in attendance. On the matter of Light and Dark varieties 15 of those present voted. The vote stood 8 to 7 in favor of referring to the entire membership of the club, by mail ballot, the proposition of two varieties. We do not approve of two varieties, as set forth in the Chicago show report this issue, although in fairness to the opposition we are publishing the article by Mr. Proctor.

Poultry Floor Litter.

Of the whole range of litters that we possess there is not one that will fulfil all these requirements better than peat-moss, more especially a good fibrous sample, and though this is comparatively expensive stuff I am convinced that it is the most economical in the long run. Peat-moss is not only a splendid absorbent and deodorizer, but, like the Sphagnum of which much of it is composed, it is extraordinarily durable, appearing to be proof against the normal processes of decay and wear. It is of the right consistency for a scratching medium (though some brands may work a little fine) and there is nothing I am aware of that can so effectually seal up the nitrogen of the manure and hold it until such time as it is transferred to the land, when that precious fertilizer is liberated by moisture.—Poultry, England.

STOPS PREVENTS ROUP

SID SMITH SAYS: Last year my O. D. Mitchell's Roup Germicide was used on high priced poultry at the big Chicago Coliseum and Stockyards Poultry Shows where it saved the lives of valuable prize winning birds. That's proof it ought to be good enough for you, isn't it? I want to prove to you that it's the very best preventive and cure for Colds, Roup and Cholera you ever used. Use it as a preventive and keep your flock well. No matter how bad your chicks may be, I positively guarantee a cure. When

U.S. GOVERNMENT EXPERTS

recommend the main ingredient in O. D. Mitchell's Roup Germicide, you can be sure that it is right. Three sizes; 50c, \$1.00, \$3.00 postpaid.

American Silver Wyandottes

By W. E. Sampson.

Claiming to be the oldest or as old a breeder of Silver Laced Wyandottes as any man living that has bred them continuously, I was greatly interested in the articles by Judge J. H. Drevensedt and R. G. Williams, which appeared in American Poultry Journal last year. The writer began breeding this variety in 1885 or 1886, and am still at it with as much interest or even more interest than ever.

The older breeders know what various changes the variety has passed through during these years. While at times certain things were not called for by the Standard, the writer ran ahead and strived to advance. He was striving for a laced wing bow when the old Standard called for spangled bar. That spangle was not in harmony with a laced breast. So we figured on a laced wing bar. When the Standard allowed gray on thigh and knee, we strove to have these laced black and white; also the body the same.

Then when the Standard called for a female with top main tail feathers laced with white, we wrote that this would never do as the males would show the same white in sickle feathers and in them it would be a fault.

What we have been striving for as a Wyandotte, in all sections, that has type as well as lacing. Not the long leg, long

An American bred Silver Wyandotte. W. E. Sampson, New York, breeder, who has practiced single mating for many years.

neck, with long head and back; nor the great big English centers. Such females do not have the correct hackle and usually a coarse head; and such females usually have a faulty breast and in most cases molt out nearly white on breast, with the black lacing reduced to merely a tip to the feather.

Males molt out better than females, and this is something that we cannot account for. Most of our females molt better as hens than they do as pullets. We have had them come in gray the third season, others molting fully as well as when pullets. One pullet, as fine a laced female as we ever saw, molted in some brown every season after pullet year until she was seven years old then came in clear again. She was a wonderful layer of large brown eggs. Some hens will molt twice in a season, the first molt being gray, then coming in nice and

Wipe Out Every Rat and Mouse

Amazing New Discovery Quickly Gets Every One. Not a Poison.

Don't be satisfied with trapping or poisoning just a few. Exterminate the whole bunch—old, young, big and little. Rats do millions of dollars' damage each year. They kill chickens, destroy grain, damage buildings, merchandise, and are filthy disease carriers.

A wonderful new scientific discovery called Imperial Virus now enables you to clear your place of every rat on it. The amazing feature of it is that it is not a poison and affects rodents such as Rats, Mice, Gophers, etc., only. It is perfectly harmless to humans, stock, poultry, pets. It can, therefore, be spread anywhere knowing it will kill only the pests you want to get. One rat affects the others and in a short time the whole colony is exterminated, root and branch. They die outside, too, hunting air and water.

You Can Try It FREE

The manufacturers of this amazing Virus, to get it quickly established and widely used, are making a Special Guaranteed Introductory Offer of two regular, big, full sized (double strength) \$1.00 bottles, for the price of one. Use one yourself and sell the other to a neighbor, thus getting yours free. They will also tell you how you can make money telling your friends about it. As this offer may not appear again, you should act at once or clip for future reference.

Send only \$1.00 (currency, M. O. Check, etc.) and the two \$1.00 bottles will be mailed you, postpaid. If more convenient, send no money; just your name and address to the Imperial Laboratories, Room 248, 2110 Grand Avenue, Kansas City, Mo., and pay the postman \$1.00 and a few cents postage, when the Package containing two bottles arrive. It costs you nothing if it does not do the work, as they positively guarantee to refund your \$1.00 any time after 30 days if you are not satisfied.

ROUP

It's choking to death thousands of chickens a day. You know the symptoms—face swollen, running at eyes and nose, comb pale, whistle or sneeze when breathing, catarrhal odor. When it attacks your flock—

6531 Broadway Cleveland, Ohio

clear later. Usually those a little heavier laced than our present Standard calls for molt clearer and hold their color better than the more open laced.

Mr. Fred Houdlette, the man who gave the Wyandotte its name, about the year of 1900, imported one of the best Silver males he could buy in England. He wrote me for six females, which I sent him. They were as near perfect in type as were produced, good size and medium in color. We were to go 50-50 on eggs. From these eggs we raised a cockerel that was splendid in markings. Mr. Houdlette also sent us a male from his imported male, which he called "Samoset." These males produced some finely marked birds but away off in type, and threw many white spots. There were more white spots in the same matings. We tried this English blood for a while but "cut it out" as there were so many culls of different colors.

We also tried the double mating on the side with about the same result; too many culls of different colors, some like Columbians, some gray, others white, and some nearly white with just a black tip

It is somewhat easier to produce good males than females in American Silver Wyandottes that are bred by the single mating system. This female is one of Mr. Sampson's best and Shows the possibilities of single mating.

on end of feathers. We did not raise a better bird than by single mating, with no certainty of what the well marked birds would reproduce. We have bred pullets from the cockerel mating that were marked fine, but when they molted you would not know they were Silver Wyandottes. We have tried it out to our satisfaction and when we can produce birds, males and females, better than the unretouched photos which accompany this article we are bound to feel satisfaction with single mating. And we do consider our first cock at N. Y. State Fair, 1921, a much better bird. He, and also the first cockerel and first pullet were produced by single mating.

We have kept hens until nine years old which laid good all the season, and we have found those nearest to Standard type the best layers. The Silver Wyandotte has proven its ability as a layer in our national contests. The latest report from Australia, where 84 pens were entered, for 50 weeks, shows the Silvers leading all others. Six birds in a team, each bird in a separate pen. The Silver team has laid 1,345 eggs each as follows: 199, 201, 261, 213, 236, 235—1,345.

Your Money Back

WE GUARANTEE that, if you will divide an orchard, your worst or best, in two parts equal in general condition, and for three years spray one part with Scalecide according to our directions and the other part with lime-sulphur, giving the same summer treatment to both parts, the parts sprayed with Scalecide will be better than the part sprayed with lime-sulphur—in the judgment of three disinterested fruit growers—or we will refund the money you have paid for the Scalecide.

Scalecide controls scale, fire blight canker pear psylla and aphid—and it does more; it has an invigorating effect upon trees and foliage, insuring plumper fruit spurs and a better chance for fruit the following year. Write today for information and price. Address Dept. 21.

LEGGETT'S SUPERFINE

Highest Quality

COLUMBIAN WYANDOTTE

Eggs \$5.00; \$10 Per 15

H. A. D. LEGGETT, WINOOSKI, VERMONT

GOLDEN WYANDOTTES

Won all 1sts at Chicago Coliseum 1920. Rich bay color. Cockerels, pairs and trios sired by noted winners. Write J. S. Pennington, Box A, Plainfield, Illinois

Their nearest competitors were White Leghorns with 1,344 eggs.

Could we have a few such men as John S. Martin, E. B. Thompson and others to put the Silvers before the public, there is no breed that could compete with them. As a market or general purpose fowl they provide large, plump carcasses.

In our forty years' experience handling and shipping dressed and live poultry, also over thirty-five years as a breeder and judge we claim that there is not an experienced breeder of the true bred Silver but knows that when all points are considered the Silver Wyandotte is the best. The Silvers combine winter laying quality, table qualities, most rapid development, early maturity, popular market size, robust constitution, economical maintenances, docility and attractive beauty.

Other varieties may compare favorably with them in one or more of these desirable qualifications.

This combination of qualities never existed prior to the introduction of the Silver Wyandotte.

All poultry history shows clearly that the introduction of the Silver Wyandotte revolutionized the poultry industry. Unquestionably the Silver Wyandotte is today the best all purpose fowl, best commercial variety in the world, and when proper justice is done them and proper credit given them, they will be so esteemed by the general public.

Sure it is hard to get every feather just as we would like to see it, but does that not make it all the more interesting, and test our skill as breeders?

Referring again to the photos here reproduced. There is no retouching by any artist on them; they are just as the camera caught them. They are products of single mating, and to repeat, not as good birds as we showed at Syracuse in October, 1921.

In closing let me say keep your females that molt clear as hens, and if they have the type and laying qualities you desire, as long as they lay and are active.

Starting a Poultry Plant.

In the September issue of the American Poultry Journal, you published an article by Mr. H. G. Foster, purporting to give an estimate of the cost of starting a commercial poultry farm.

I believe that this article will do harm to the poultry business and discourage a great many persons that have hopes of some day owning a poultry farm.

In direct contradiction to Mr. Foster, I do not believe that \$10,000 in cash will start a successful commercial poultry farm; but I do know that a few dollars in money and a wealth of experience will grow into a successful poultry farm in much less time than is required for the average attorney or physician to build up a successful and paying practice.

To many commercial poultry plants are started with only the money end of the business attended to, and the experience gained afterwards. This would read failure in any business, more especially in the poultry business, as it is essentially a personal affair, and so very much depends upon the individual who has the farm in charge; and for this reason I do not believe that \$10,000 cash is enough to start a successful poultry farm. In fact, money cannot do it. But I do know that one can start a commercial poultry farm and make a success of it if he is willing to start on a small scale and take the time to enlarge his plant as his flock grows.

I do not believe that it is practical to start with too big a flock. There are so many problems to come up; so many things to learn, that it takes several years to get a good start; but after the business is learned in the good old "University of Experience," there is no more interesting or paying business than a commercial poultry farm.

Stop Hatching Weak Chicks

With Cheap Incubators

Remember it is not how many you hatch that counts, but how many you raise. Chicks that hatch out weak and wobbly, and live but a few days, mean nothing to you except trouble and loss. They make one sick of the poultry business. Most of the chicks you lose in the first two weeks die because they did not hatch out with enough vitality or strength for a good start.

Queen Incubators

Hatch Chicks That Live and Grow

The Queen is accurately regulated—taking care of a temperature variation of 70 degrees without danger. It is built of genuine California Redwood—very scarce in these days of imitation and cheap substitution. Redwood does not absorb the odor from the hatching eggs. Cheaper woods, and pasteboard lining in iron and tin machines, retain the odors, to weaken and kill the hatching chicks.

Start your chicks with a Queen constitution and they will make money for you. The Queen is not a cheap incubator, compared with many of the cheaply constructed machines on the market, but it is cheap in the long run. It will be turning out high percentage hatches years after the cheap machines have been junked.

Sold by dealers. Catalog sent free on request.

This is a saving to you of one-third the regular price. If you have one or more of the above books, you can get the balance at one-third off the regular prices by ordering six or more at one time. No order for less than six accepted at reduced price. Take advantage of this liberal offer today. If not satisfied with your bargain, return the books and we will return your money.

AMERICAN POULTRY JOURNAL, 523 Plymouth Court, CHICAGO

Personally, I have known several ventures that started out with plenty of money and no experience that were expected to make a fortune from the sale of eggs or broilers, and they all failed in a few years. Again, I have also known about a number of persons that started with a few good hens, on a back lot, grew up with their flocks, and today have a very profitable business.

Start small and grow up with the business. One does not need \$10,000 to start with, nor \$1,000, for that matter. Start with a good pen of the breed you expect to raise, and then gain your experience and profit as your flock increases. You will have to pay out some money until you get a flock large enough to commence bringing in returns, but it will not require much money, and you will be surprised how soon the flock will be paying for the new building, incubators, feed and supplies.

Personally the writer has raised chickens during the past fifteen years. No effort was made to make a profit, but the pleasure of possession was profit enough. The winter of 1919 found me in bed with a very severe attack of heart trouble, and the spring of 1920 found me hardly able to walk, only weighing 127 pounds, when my normal weight was 190. If you have ever been confined to your bed for six months with three physicians in attendance, you can appreciate the situation of my purse for ready money. Something must be done and the chickens were our first thought. We had 600 splendid Leghorns and a lot of second hand incubators; but the best of all we knew something about the poultry business, as we had studied it for years. We went after the business side of the matter. I say "we" as my wife was as much interested as I. We worked hard and we made a success of it; and I will "tell the world" that it does not require \$10,000 to start a successful poultry farm. I know from personal experience.

An acquaintance remarked when she heard that I was raising chickens, "that I was letting my wife make the living." Let me tell you it is no woman's or even a boy's job to look after 1,500 "up to the minute" Leghorns. It is a job for a "He" man and you will find it out if you even tackle the job.

But, as to Mr. Foster's statement. He is absolutely correct in his estimates, but he does not start at the beginning. You must use some money and a lot of time before you get to a point where you will need the equipment that Mr. Foster places a price on, and by commencing small and building up, so that when you need the equipment mentioned, you will have the money from your flock to pay for same.

A very successful poultry man, when I visited him five years ago did not have \$50 invested in buildings and equipment, and was working for a very low wage at his trade. Today he has several thousand dollars invested in buildings and devotes all his time to the poultry business.

You can make a success raising poultry if you will work and learn.

Indiana.

Harry A. Axtell.

Yellow Shanks in Leghorns.

Editor American Poultry Journal:

I was much interested in the letter of F. W. Smith, on page 1114 of the December, 1921, issue.

I think, however, that there is an aspect of this leg color question which is often disregarded by those who discuss it, particularly in the case of those who say that our Standard of Perfection and system of judging gives the awards to the non-producers.

I have bred White Leghorns myself, and am now a breeder and exhibitor of Single Comb Buff Leghorns. It is true that the beak and shanks of a pullet start to fade with the first dozen eggs. After five or six dozen eggs have been laid the yellow color is perceptibly fainter. It has been loudly heralded in the past from certain quarters that when such birds were not placed, our system of judging was encouraging low production.

But expert exhibitors of Leghorns seldom show a pullet that has laid more than a very few eggs; it may be done at county fairs, but it simply is not done at winter shows, and at large fall fairs. When a Leghorn pullet has laid two dozen or so of eggs, the plumage becomes somewhat rough and disheveled; the comb sometimes becomes coarser than it was, and the bird in general loses its first sleek and lustrous appearance. Now, every pure-bred Leghorn pullet has yellow legs until it has laid three or four dozen eggs; hence, if Leghorn pullets are out of show condition after laying two dozen, it seems to me that as far as pullets are concerned, the leg color question is entirely beside the point.

Those who say that our present Standard of Perfection penalizes high production in this instance, simply show their ignorance of the art of exhibiting poultry, for at any real show,

Make Big Money Start a Hatchery

Whether you hatch for yourself or for others, you want the best possible percentage of strong, healthy chicks.

CANDEE double temperature control—an automatic regulator at heater plus an automatic regulator at each 300-egg compartment—gives you results not obtained by other methods. Perfect ventilation—no robbing eggs of their original moisture.

Immediate shipment guaranteed. Send to-day for big, free catalog that gives experiences of many successful poultrymen.

Candee Incubator & Brooder Co.

Dept. 2 Eastwood, N. Y.
Manufacturers of Incubators, Hot Water Brooding
Systems and Colony Brooders.

You can start with this 1,200-egg machine, or a 600-egg size, and add extra sections as your business grows. You can hatch up to 300 eggs separately in each compartment. Note thermostat regulator and enlarged views of valve that controls hot water flow into each compartment.

HAROLD TOMPKINS' RHODE ISLAND REDS

Single and Rose Combs

Fancy and Utility Birds

For years this famous strain has demonstrated its superiority. The matchless winnings made in 1921 at the great Red Meets held at Boston and Rochester prove that my birds possess the very latest present day requirements for Standard Rhode Island Reds, and are unexcelled as Prize Winners.

Show Birds

FIRST PRIZE C. COCKEREL

Boston, December, 1920; January, 1921.

From my large number of different styles of birds linked with my years of experience I can select just the kind that will help you win. These birds possess such a striking resemblance to my famous winners that their popularity is assured in the show room.

BREEDING BIRDS

If you want to produce Rhode Island Reds that will win and lay for you, order breeding stock from this famous strain of producers.

Utility Birds

Early hatched cockerels and pullets that will improve your color and egg production. No matter what your wants may be I can take care of them satisfactorily. Order at once.

KILL all the RATS before the chick season opens

Get the rats or they will get your chicks, cause you heavy loss of valuable youngsters. Kill rats to prevent the year-round loss of feeds. Kill them to avoid danger of diseases, the germs of which are carried by this filthy vermin.

The best season to attack rats is now, when they are concentrated in winter quarters in your poultry houses and other buildings. The best way is to use

the scientific bacteriological preparation of pure cultures of a virus which is sure death to rats but absolutely harmless to all other animals and poultry, as well as to human beings.

Rats eat Rax greedily, then sicken and die within a few days. The disease passes from rat to rat and frequently the whole rat population of the premises is exterminated. RAX is inexpensive—easy to use—free from danger—does its work thoroughly—is absolutely guaranteed.

WARNING—Since RAX—the perfect rat virus—was discovered and introduced several years ago by Dr. Earp-Thomas the noted bacteriologist, it has been widely imitated. If you have tested the imitations and found them unsatisfactory, the reason lies in two factors. First, the virus itself—second, the package.

To be effective, rat virus must contain live germs of the right kind and in large numbers. RAX is prepared in our own great laboratories and is kept up to the highest standard.

To be kept alive and active, the virus must be packed in receptacles to which air is admitted. Without air the germs weaken and die. Ordinary corked bottles kill the germs in a short time. RAX is packed in bottles fitted with the ventilated Earp-Thomas Stopper, which admits air through plugs of fine cotton. The cotton checks all molds and other organisms so RAX cannot become contaminated. This wonderful stopper is patented—is used exclusively by us. It is the device that enables us to guarantee delivery of rat virus to you in live, active virulent condition.

When procuring rat-killing virus protect your money by insisting upon two things. First, that the bottle is labeled RAX, manufactured by Earp-Thomas Cultures Corporation. Second, that it is fitted with our patented stopper having a glass tube shaped like a button hook. Then only can you be sure of material which will positively exterminate all the rats on your premises.

Long experience in this field—scientific exactness in manufacture—the one ventilated package—enable us to positively guarantee that RAX will kill rats and mice. And we do! Don't bother with troublesome and dangerous traps or poisons. Just use RAX and your premises will be free from rats and mice. No trouble—trivial cost—sure results.

Write today—a postal will do—for our free circular with directions for use of RAX.

Earp-Thomas Culture Corp.
80 Lafayette St. New York

a pullet that had laid enough eggs to affect the leg color would not have a ghost of a chance to get fifth prize. Any experienced exhibitor will confirm these statements.

Mr. Smith says that certain breeds "have pure white shanks at the end of the laying period." To be sure they do, but they are not shown at the end of the laying period. They are shown at the beginning of the laying period.

The above refers to pullets. In the case of hens (Leghorns in particular), I think that there ought to be a little toleration for paleness in the beak and shanks.

Mr. Smith states that he considers our Standard of Perfection inconsistent in requiring yellow legs and white ear lobes in Leghorn males. Why should this be thought inconsistent? We see constantly at the large shows White Leghorn males with yellow legs and pure white ear lobes, do we not? It seemed at one time difficult to breed White Leghorns with yellow legs and still have the plumage and quills pure white, but by long continued, careful breeding it has been done. I do not think that there is any basis for thinking that yellow shanks and yellow ear lobes are necessarily correlated. In the American varieties we have yellow legs and beak, and red ear lobes. We do not call the Standard inconsistent here in requiring the ear lobes to be different in color from the legs and beak. I think that it is all a matter of breeding. Likewise in the Minorcas, Spanish, Andalusians, and many other breeds, the shanks are slaty blue or black and the ear lobes pure white; yet we do not accuse the Standard of being inconsistent. In still other breeds the shanks and beak are white, to-wit: Orpingtons, White Minorcas, and many others. Yet we do not say that the Standard of Perfection is inconsistent.

I heartily agree with Mr. Smith when he says that he does not consider a creamy lobe out of place on a Leghorn male. I for one think that the creamy lobe looks much better than a pure white lobe, on the Buff Leghorn if not on the White. And perhaps Mr. Smith is not aware of the fact that the present Standard of Perfection permits either white or creamy ear lobes for Buff Leghorns. If the White Leghorn breeders want the same, let them tell the revision committee about it; now is their chance.

Mr. Smith is right when he says that to most people the Leghorn is an egg producer, and should be taken that way. But stock that is forced for egg production will never win in real competition.

In closing I wish to say a word about the American Poultry Association's policy in admitting new breeds to the Standard. They admitted the Chanticleers, although there is not a single breeder in the United States, and only a very, very few in Canada. They admitted Missouri Fluffs, which are a freak, and have not now, nor never will, have sufficient popularity to amount to anything. They are in the same class with Red Pyle Leghorns. I venture to say that many licensed judges do not know that the latter are in the Standard. The A. P. A. has repeatedly turned down the Rhode Island Whites which have many, many supporters in the United States and Canada, and I believe also a specialty club back of them. I think that it is a shame that the A. P. A. has treated the breeders of R. I. Whites as it has, and if I were a breeder of Rhode Island Whites and someone asked me to join the A. P. A. I know just about what I would tell them. I would say that I would not become a member as long as the A. P. A. discriminated against my breed.

Michigan.

J. G. Vos.

A. P. A. Election.

We respectfully invite nominations for officers. A member may ask to have his own name placed on the nomination ballot or he may propose others for different offices. Advise us your wishes in the matter and be prompt as the proposed names must be mailed to the election commissioner in time to appear on the printed ballot. For further details address the American Poultry Association, E. B. Campbell, Secretary, 655 West Third Street, Fort Wayne, Ind.

Arthur G. Duston is now located at Independence, Mo., as manager of the White Wyandotte flock of R. L. Train. Mr. Duston offered to wash and fit birds for the Kansas City show; and announcement to that effect was published in the Kansas City premium list. Many birds were received from Oklahoma and Texas, but the demand for conditioning was so great that several breeders had to be turned away.

LEE'S LICE KILLER

Kills lice, mites, bed bugs, etc., affecting poultry. Spray or paint on roosts, etc. Gets body lice on chickens, too. Works while they sleep. No dusting, dipping, greasing or banding. Saves lot of unpleasant work. At most towns, at stores handling Lee Poultry Supplies. Write for information and FREE Book. **GEO. H. LEE CO., Dept. P-1, OMAHA, NEBR.**

Partridge Wyandottes of Today

By W. L. Bender.

We often read articles of how the Partridge Wyandottes were originated and who were the principal breeders. It has come to a time now where the beauty breed has found home after home in the yards of well known breeders. Every one of these fellow breeders are breeding better Partridge Wyandottes every day.

Here is what The American Poultry Journal had to say of a recent show winner: "More than once first Partridge Wyandotte cock has been in the best feather of any cock at the New York State Fair. The outstanding winner this year was a worthy successor of the great line of predecessors; elegant in type and style, 'bright yet rich top color; soundly striped.'"

Do you know that the Partridge Wyandottes of today breed as near to type as any of the Wyandotte family and more so than most of them? They are the most lovely birds any one ever saw, with their curved body moderately short, body of good depth, standing erect on good yellow legs set well apart, and showing against that glossy black breast a lovely shade of red in their hackle and saddle with the same shade of red in wing bow. This made them an elegant bird to look at indeed.

They, like all breeds, have had a few breeders who have raved and torn on color. Some wanted the darker shades and some wanted the brighter tones. Some made fools out of themselves on the color question in breeding them to light. Bright does not mean light or lemon, and too bright a male will do great harm to your offspring, throwing many lemon neck females. But the breeders of today are now coming to their senses and breeding the bright red males not to extreme either way.

Some people seem to think we have to double mate to get those elegant show cockerels and those extremely well penciled pullets of mahogany brown ground color. That is all gone and past. We are today getting those fine show birds out of our single mating. What I call show birds are birds that can go into the leading shows and bring home the blue ribbons as well as bringing home the purple ones where there are any up. Will mention one at the recent Ohio State Fair, where there were four thousand birds cooped. A Partridge Wyandotte pullet was awarded the Grand Championship female of the exhibit. This pullet was bred by the single mating system by Mr. Kraner of Ohio.

They used to talk about what fine hens and pullets such a breeder had. Now they talk about what fine quality runs through a complete line of specimens such a breed shows. Here is one thing that I want to bring to your mind about the female of today. Here is what one fellow had to say at the recent Hanover Fair: "Those females are the best I ever saw, and did not think that there was anything like it. I am glad I could see them." It is surely a pleasure to have such nice females.

Here is another show where there were females of that makeup. Here is what A. P. J. said of the first hen at Syracuse: "First hen had better penciling in fluff than most hens have on their backs." Every show room you are in

The FIRST Oil Burning Colony Brooder-Who Made It?

The First
Oil Burning
Canopy
Brooder

Here is the Answer

There has been some confusing statements made with regard to who originated the oil burning canopy brooder. In order that the poultry raising public may know the FACTS—know WHO is the actual originator and patentee of this now very popular brooder, we show herewith the FIRST one ever made.

It was originated and designed by H. M. Sheer and tested for several years before being offered to the public. To set at rest for all time, the question as to WHO did originate it, we illustrate the first one ever made and as further evidence give the list of patents below, which also cover other equipment originated by us, is conclusive as to WHO originated the Oil Burning Canopy Brooder.

Patent No. 961,654
Patent No. 977,973
Patent No. 1,005,660
Patent No. 1,056,595

Patent No. 1,065,650
Patent No. 1,128,535
Patent No. 1,149,959
Patent No. 1,262,397

Patent No. 1,273,679
Patent No. 1,280,091
Patent No. 1,285,428
Patent No. 1,373,362

Patent No. 1,392,708
Patent No. 1,392,709
Sol-Hot
Trade-Mark 134,438

From this FIRST AND ORIGINAL brooder, the Sol-Hot and then the Super Sol-Hot Heaters and Brooders were perfected. The history of the development of the Wickless Oil Burner is a very interesting story. It is being made ready for publication. It will tell, step by step, how the present highly efficient Sol-Hot Heater has been developed. You will then appreciate as never before, after reading this story, what a vast improvement and superior heater the Super Sol-Hot is over anything ever offered to the poultry public.

All Metal Vaporizer
Patented

Why the Super Sol-Hot is Supreme

The reason the Super Sol-Hot Heater is so far ahead of all other types of heaters is because of my patented float oil control. The Super Sol-Hot is the **only** heater on the market with a **positive**, constant oil level. The sectional view below shows how positive and constant the oil level is maintained in the Super Sol-Hot with my patent float control. The float is placed at the bottom of the oil container just below the filter. This float operates automatically, the same as the float in a carburetor of a gasoline motor and maintains a constant oil level that cannot fluctuate and flare up as other heaters do that depend simply on the open pipe, bottle feed.

In ordinary heaters with **open pipe feed**, there is nothing to control the oil feed and the flame naturally flares up every time the bottle feeds, burning much larger at first and gradually growing smaller until the bottle feeds again. This is

Sectional View of Super Sol-Hot

The patented oil level control is accomplished by means of a float and thermostat in the lower part of the oil chamber directly under the filter. This float operates automatically the same as a float on the carburetor of a gasoline motor—it never requires attention—never causes any trouble. The thermostat is made of brass carefully and thoroughly tested. Owing to the fact that it is enclosed and sealed in bottom of oil container and that varying changes of temperature never subject it to more than 1/32 of an inch expansion, it will last a lifetime without ever requiring attention—it is never subjected to over-expansion like thermostats which are used on incubators where they are exposed to the direct radiation of the hot air.

PATENTED MARCH 29, 1921

why an even flame is impossible without a constant feed control. This is why a low flame can't be maintained in ordinary burner with **open pipe feed**, and often the feed drops to a point where the flame goes out entirely.

H. M. Sheer Co.

H.M. Sheer, Inventor Designer and Patentee

Two Outstanding Features: Float Oil Control and Metal Vaporizer

The "float oil control" in Super Sol Hot Heaters is the big outstanding advantage of my heaters over all others, and together with the Metal Vaporizer, which does away with all wicks and asbestos ring, makes Sol-Hot Heaters **incomparable**. There is none that approach them.

They give you a brooding equipment which you have hoped for—wished

for, yes, prayed for. All you have to do is to set the size flame you want when you start it,

keep the bottle supplied with oil and forget

all the old troubles so common with

all other heaters. If you want a low

flame you can have it without fear

or danger that it will go out or fluctuate in the least. Our patented Metal Vaporizer

does not carbonize like the old-fashioned asbestos ring vaporizer, and

can easily be removed and cleaned. Asbestos ring vaporizers can also

be used on the Super Sol-Hot, but why should anyone use

the old-fashioned carbonizing asbestos ring vaporizer when

this new better equipment is now available?

Why Buy the Imitations—Get the Best

Ever since I made the first Oil Burning Canopy Brooder years ago, Sol-Hot Brooders have always maintained their lead in the public's approval, strictly on their merit.

This season I have attained that for which I have strived for years, namely, to perfect a positive automatic oil control heater—one without valves to adjust—no springs or mechanisms of any kind. With a Super Sol-Hot you simply light the burner, that's all—no hand adjustments—the burner won't go out—won't overflow—won't smoke—burns evenly all the time. My new patented oil control entirely eliminates the element of human control—it's the sensation in the poultry equipment field this season—nothing like it.

Don't Be Misled—Be on the Safe Side

When you are in the market for an Oil Burning Canopy Brooder, come to the **ORIGINATORS** for it. Get it at headquarters. Why buy the imitations?

With a Sol-Hot Brooder you never have to worry about your chicks—you know they are safe and comfortable all the time, because Sol-Hot is always dependable—always on the job. Sol-Hot Canopy Brooders are furnished in three sizes, 32, 42 and 52 inches in diameter. Remember, too, we furnish the correct size Sol-Hot Heater for each size brooder—not the same size for small and large brooders as some do. For the "back lotter" or poultryman who has only a few chicks we also furnish the "Baby Sol-Hot" with 22-inch canopy.

Made in 5 sizes suitable for Small Brooders and Incubators from 60 egg and chick sizes to 3000 egg and chick outfits.

Send your name and address and we will send you free and postpaid, beautiful catalog folder in colors, telling all about Sol-Hot Heaters and Brooders. How they are made — why they are better — why it is the equipment you should buy,

Dept. 26 , Quincy, Ill.

Rhode Island REDS

Correct Type and Color

REMARKABLE BOOK "Blue Ribbon Reds"

Sent Free To Everybody
Who Mails Coupon Below

By means of the most remarkable set of Rhode Island Red illustrations ever produced, W. H. Card, secretary of the Rhode Island Red Club and the greatest living authority on REDS, in "BLUE RIBBON REDS," shows in a way so simple that every beginner can understand what constitutes the correct type and color of Rhode Island Reds. There are twelve drawings illustrating type and fourteen illustrating color. These drawings show the ideal Reds, both male and female, as well as the various shape and color defects most commonly found. Mr. Card also points out which defects are serious and which are of only minor importance.

Here are a few of the many subjects in "Blue Ribbon Reds"

An A-B-C course in Judging Rhode Island Reds (in five lessons)

How Rhode Island Reds originated.

Mating Rhode Island Reds for Color and Shape.

How to obtain fast growth and large size on Rhode Island Reds.

How to breed up an egg laying strain.

How to cull Rhode Island Reds.

How to prepare Rhode Island Reds for the Show Room.

Which is the correct Rhode Island Red color.

Disqualifications.

Standard weights

Feeding Poultry at all ages

Linebreeding.

How to treat sick fowls.

How to get rid of lice and mites.

How to build poultry houses and equipment.

Special Illustrated Features

A picture of Rhode Island Reds in natural colors, suitable for framing, the latest and best ever published, copyrighted 1919. Pictures of many prize winning Reds at National Shows—Description of a common sense window for fresh air poultry houses and detailed illustrations made from blue prints—How to build a practical poultry house for a small flock of chickens—How to make a good home-made trapnest.

you hear the same thing, and every farm or back yard you visit where Partridge Wyandottes are being raised, it is the same old story of relatively beautiful quality.

Now, you ask a breeder why he likes the Partridge Wyandotte. He comes right back at you without hesitation: "Why they are good layers in the winter time when the eggs bring the very highest price; they are good market fowl, as they mature quickly, and they are so plump when dressed with such golden yellow skin. Another reason is, when you go to the yard or farm they all look the same; they are not all stained up like white birds, and when you come to show them you are not bothered by having to wash them. Washing a bird disgusts if not discourages many fanciers.

I wish to say if any of the readers have the pleasure in attending the National Poultry Show in Chicago January 11 to 17, do not forget to call at Partridge Wyandotte alley and get acquainted with the best bunch of club members on earth today. They will make you think you have always known them all your life. They will be pleased to show you down the line and explain all about their beauty breed. That is the club show for this year.

Poultry Tariff Situation:

By Jas. E. Rice.

The history of the poultryman's tariff fight cannot yet be written. Victories have been won but the big final drive to put the law on the statute books is yet to come. Thus far the campaign has been largely preparation and presentation of facts. We were obliged to know our case before we could argue it. It was necessary to make a thorough study of the world poultry situation as regards sources of supply and demand for poultry and poultry products, the imports and exports of eggs and egg products for periods of years, costs of production, time and cost of transportation, in order to proceed intelligently to ask for tariff rates which, if granted, would prove to be of the best interest to all of the people.

Until now the burden of responsibility has rested upon a comparatively few persons, but from now on every person who keeps poultry, or handles poultry or poultry products produced in the United States, or who eats poultry and eggs or egg products, has a personal duty to perform. All of these persons should be interested in our common problem involving the general welfare of our whole country. All of our people are vitally concerned in the quality of our food products and the prosperity of those who produce them. It is in the interest of the consumer to have the things he eats or wears or rides or reads or hears or sees produced in America, if they can be produced here economically. Farm products produced in America now should be as popular a slogan as "Made in America" has been in the past and should continue to be in the future for manufactured products.

This means that from now on our campaign must be one of informing the public of the needs for tariff legislation and for the personal effort of voters in letting their representatives in Congress know how they want them to vote, and to be able to give a valid reason why they are justified in urging a tariff on poultry products.

The following tabulation shows the situation past and present regarding the tariff rates on eggs and egg products, and the rates recommended by poultry committee for the Senate tariff bill, 1921:

	Tariff Present	Tariff Fordney	Proposed Rates
Eggs in shell.....	Free	.06c	.08c
Whole eggs02c	.04c	.08c
Frozen or liquid 10% advalorem		Equivalent	
Egg yolks02c	.04c	.08c
	.02c	.04c	.08c
Frozen or liquid			
Egg Albumen.....	.01c	.04c	.08c
Dried whole egg....	.10c	.15c	.24c
Dried egg yolks 10% advalorem		Equivalent	
	.02c	.15c	.24c
Dried egg albumen	.03c	.15c	.24c

Altogether the prospect looks brighter now than at any time heretofore. The particular features of encouragement are, first, the thorough organization of the various national

AUTO OWNERS

Save half of your tire cost by using Double Mileage, Double Tread Tires. Guaranteed 8000 Miles. We lead, others try to follow. They are reconstructed of highest grade material—hardly ever blow out. farm groups and their earnest efforts to arrive at a sound method of determining equitable tariff rates on all commodities, and their determination to see that exact justice is done in the construction and passage of a tariff law; second, the appointment of a Congressional Committee and the earnest efforts of that committee to study the whole problem of the agricultural condition and the needs of legislation for its development.

If we are to win it will be by virtue of the personal efforts of individuals, firms and organizations who are most vitally concerned in the promotion and protection of the poultry industry. The best information available on the world poultry situation indicates that we are likely to have larger rather than smaller importations of poultry, eggs, and egg products from the cheaper producing countries, particularly the Orient, Australia and Argentina.

If the American people prefer to eat home-grown products and thus develop home industries, now is the time for them to take an active part in securing tariff legislation that will provide equitable protection for the things that farmers sell as for the things which they buy. Write your congressman and senator today in support of the proposed rates listed above.

Chicago Coliseum Show

(Continued from page 19)

classes. First and second hens. C. N. Myers, stand at head of class; wonderful quality; our choice being second. First cock, good body, clean color, in pretty good feather. Beyond this prizes seem to go to under color of back. First pullet has two kinds of barring; mature feathers on wing; hide-bound with chick feathers on back and in tail; and chick feathering wins. First pen has pullet in it devoid of secondaries, and primaries half gone. Such a bird would throw out a pen in any other variety in the show. Fourth cock, heavy in rear of body, no tail. First and second cockerel show improvement in right direction, but goal will not be reached until cockerel like 115, Irvine, can win. Judge seemed to prefer heavy under color in back to anything else. He overlooked finish in cocks, chick feathers or no feathers in pullets, and metallic in cockerels.

We have been harping on lack of finish, chick feathers, chick tails, twisted wings, split tails, need of balanced type, deficiency in cleanness of surface barring, for three years. The hide-bound stuff that has not molted its chick feathers; and bob-tailed cocks still win; the judge still allows, in this season 1921-22, rust and metallic sheen on back of males in order to ride the old fashioned hobby of undercolor on back.

It is discouraging to constructive breeders in the West. John W. Yant, who has devoted twenty-one years of his life to his birds, expressed keen regret that such types should win. Progressive men should see to it that this class next year brings forth different sort of comment. There are good birds being shown in Chicago, and it is absurd for the West to tolerate longer the strange assortment of bobbed tailed, off type, bad-winged, chick-feathered stuff. A house cleaning is needed. This was the condition two years ago. Then the management hired cock to judge last year, and with a return engagement this year, he could have done the breed a service. As it stands, he lost his opportunity, and good breeders share their disappointment.

Barred Rocks Exhibition—Jas E. Huey, Union, Ky., 1 cock, 3 hen, 4 chl., 3 pl. Cowan & Pattison, Waterloo, Iowa, 2-4 cock, D. F. Palmer & Son, Yorkville, Ill., 5 cock, 2 pl., 1-3-4-5 pens. J. D. Veach, Helena, Mont., 3 cock, 4 hen, 3 chl. C. N. Myers, Hanover, Pa., 1-2 hen, 5 pl. Mrs. W. G. Curd, Saverton, Mo., 5 hen. John W. Yant, Canton, Ohio, 5 chl., 2 pen. E. C. World Champion Layers

One New Year's Resolution

You Will Never Want to Break

"I will introduce into my flock the egg-laying strains that have consistently won in leading Official Contests—that have produced the only two consecutive contest winners with over 300-egg Official Records."

From North-East-South-West, letters from thousands of pleased customers prove that the Pennsylvania Poultry Farm strain pays.

NORTH

\$71.00 from One Bird Not
A Year Old

Canada.—I have one pullet from you last year out of Keystone Maid. I have 23 chicks out of her and sold \$71.00 worth of eggs from her and she won't be a year old until the 28th of June. Every egg hatched. —C. S., Waterloo, Canada.

EAST

\$100.00 for Twelve 8-Week-Old
Cockerels

Pennsylvania. —Enclosed find \$20.00 for cockerel.

I am more than pleased with the results I have obtained from the day-old chicks purchased last spring at six weeks of age. The cockerels were crowing at the age of eight weeks. I sold 12 of them for \$100.00. The pullets have been laying constantly all winter. It pays to buy good stock. That is why I am coming back for a cockerel.—J. R. G., Palmyra.

SOUTH

\$600.00 Profits

Texas.—The eggs we got from you three years ago have proven excellent; cleared from 180 birds, offspring of the above mentioned eggs, around \$600.00 last year. I have kept different breeds on my farm the past 27 years. Yours are the best ever.—S. Bro., Dallas.

WEST

\$975.60 Profit for Ten Months

The 162 pullets of which I have previously told you had laid up to Sept. 1st, 176 eggs each since last November 1st. And during that time their eggs have been sold for \$97.56 above feed cost and sold on the open market. They will just about net \$1,000 for the full twelve months.

From the chicks I received from you this Spring we have a fine flock of 250 pullets nearly developed and about ready to lay.—P. R. C., Ashtabula.

There are hundreds of letters of similar strain in our files. There are hundreds of birds of similar strain in our flocks, ready and able to do the same for you as they have done for us, for thousands of customers, and at the Official Egg-Laying Contests of which they have been winners. No better claim than ours exists to

Write for Free Circular detailing attractive bargains that we are now offering. Or get our handsome illustrated catalog, "The Story of the 300-Egg Hen." Price, 10c, deducted from first order.

R. C. Barred Rock Cockerel Bred—S. B. Wenger, 1 hen, 2 pl, 2-4 pen. J. I. Niswander, 2-3 hen, 3-4 pl, 1-3 pen. Isaac Green, 4-5 hen, 5 pl. W. S. Hoke, 1 pl. Mrs. G. R. Good, South English, Iowa, 5 pen.

R. C. Barred Rock Pullet Bred—S. B. Wenger, 3-4 cock, 4 ckl, 2-4 pen. J. I. Niswander, 1-2-5 cock, 2-3 ckl, 1-3 pen. W. S. Hoke, 1 ckl. L. F. Roblee, Lockport, Ill., 5 ckl.

Fifty-three single birds cataloged and 47 prizes awarded; there being 8 single classes; 9 pens, and every pen under ribbons, 2 classes. Ninety-eight birds and 92 stand under ribbons. There are not only Dark Barred Plymouth Rock hens, but Rose Comb Dark Barred Plymouth Rock hens. This multiple classification may mean more entry money for the show, but after playing this game, Mr. Hewes may find it turns out like the Chanticleer, a breed which he provided classes for at the Coliseum for two years, recommended into the Standard, and is repaid this year by not a single specimen in competition. The rose comb is easy to put on any single comb breed. It is dominant to the single type of comb in breeding. Heretofore, however, the rose comb has been typical of the Wyandotte and a Barred Wyandotte has never been made to go.

White Plymouth Rocks—Adam F. Polt, Hartford, Wis., 2-4-5 cock, 5 hen, 3-5 ckl., 3-5 pl., 1 old pen, 2-3 young pen. Starks Farm, Starks, Wis., 1-3 cock, 1-2-3-4 hen, 1 ckl., 1-2-4 pl., 2 old pen, 1 young pen. O. K. Poultry Farm, Lebanon, Ohio, 4 ckl. W. H. Martin, Jr., Mobile, Ala., 2 ckl. Fritz Farm, Staunton, Ill., 3 old pen.

First cock, good head and type; smooth feather. Second, another splendid cock. First hen, best modeled body we ever saw at the Coliseum. First cockerel, big, good head and back, rather open tail. Second, lower set, nicely finished. Cockerel 350, Martin, in full plumage, good type, white. First pullet, like first hen, finely turned out head, correct back, tail, breast, wings and sides of body, white. Second pullet on same order; wonderful quality. Such females leave nothing to be desired. Third, another large, long-backed, nice-tail pullet. Golden yellow legs and white plumage in this class.

Buff Plymouth Rocks—Rothgeb Bros., Milford, Ill., 1 cock, 4 hen, 4 ckl. Lichtenwalter & Ellis, Girard, Pa., 2 cock, 2 hen, 1-2 pl. Frank W. Kramer, Ft. Atkinson, Wis., 4 cock, 3-5 hen, 3 pl. Cory & Cory, Muskogee, Okla., 3 cock, 5 pl. Edward E. Minard, Lorain, Ohio, 1 hen, 1-5 ckl., 4 pl. J. O. Anders, Newark, Ill., 2-3 ckl. Mrs. L. B. Eminger, Gibson City, Ill., 1 young pen.

First cock, big, level color; trifle long in head and drum stick. First hen beautiful color. Second, outstanding Rock shape of class. Good entry of cockerels. First, big, long-bodied bird, good head; nice sheet of top color; shy in breast. Second, another grand, big bird, tail blending with back. First pullet, attractive type and color. Second, comb turns. Clear tails and smooth color all through pullets.

Partridge Plymouth Rocks—E. H. Hamann, Hamilton, Ohio, 2 cock, 1 hen, 5 ckl., 2 pl. L. Bowers, Winnipeg, Man., Can., 1 cock, 2 hen, 2 ckl., 1 pl. Riley E. Smith, Albion, Ind., 3 hen, 4 ckl., 3 pl. Ray R. Finders, Ferguson, Iowa, 4 hen, 1 ckl. Har-

ry Katzen, Sykesville, Pa., 3 ckl.

First cock, big, long bodied, bright ground color. Second, darker, pale in lobe. Second hen, good Rock type, clear penciling; first nice penciling, ragged in tail. Cockerels not up to what one sees at New York. First pullet, beautifully marked; little more range would help her.

Silver Pencil Rocks—Geo. F. Greenwood, Lake Mills, Wis., 1 cock, 1-2 hen, 1-2 ckl., 1-2-3 pl.

Best display ever seen in West. Here is size and type, with silvery white backs in males, beautifully striped; and fair penciling in females; good Rock heads. A better cock than first, rare indeed. More wonderful exhibits of this kind will mean a tremendous increase in number.

Columbian Rocks—J. W. Bowen, Mechanicsburg, Ohio, 1 cock, 1 hen, 1 ckl, 1 young pen.

First cock, lacks black striping. First hen, biggest and best formed hen we have seen in years; good neck, wings and tail.

Black Java—Henry C. Turck, Chicago, Ill., 1 hen, 1 ckl., 1-2 pl.

Real Javas; good type in females; black eyes, nice sheen to plumage. Male too short in back and body.

Silver Wyandottes—W. E. Sampson, Kirkwood, N. Y., 3 cock, 1-2 ckl, 5 pl. A. & E. Tarbox, Yorkville, Ill., 1-4 cock, 1-2 hen, 3-4 ckl, 1-2 pl., 1 old pen, 1 young pen. N. C. Rublee, Fitchburg, Mass., 2 cock, 4 hen, 5 ckl, 3-4 pl. Chas. F. Schrader, St. Peter, Ill., 5 cock, 2 young pen. W. D. Topp, Tupelo, Miss., 3 hen, 2 old pen, 3 young pen.

Improvement evident in Silvers. First and second hens, good size and type; nice

The five Imperial "Ringlet" Barred Rock cocks winning all prizes, first, second, third, fourth and fifth, at Madison Square Garden, New York, January, 1921. Owned by E. B. Thompson, Amenia, New York, originator of the world renowned Imperial "Ringlets."

Globe Feeding Produces Hatchable Eggs

In feeding for eggs, you want something more than just a lot of eggs. You want eggs that will hatch sturdy, healthy chicks.

GLOBE EGG MASH will do the trick for you. It is not a condiment nor a highly concentrated protein mash. These force egg production at the cost of health and stamina. There is no drain on the hen's system when GLOBE is fed. She produces a maximum number of eggs, in a healthy, normal manner. They are eggs that contain nourishment to grow strong chicks in the shell.

DICKINSON'S GLOBE EGG MASH

The Standard for 19 Years

Only Dependable, Honest Products could stand that test

It is called "The Sure Egg Producer"—and it is. Contains the proper vegetable, cereal and animal proteins so perfectly balanced that they develop eggs in a good, healthy, normal manner and keep the hen in good condition for continued egg production.

Read the experiences of these practical poultrymen:

CONRAD ANDERSON, JAMESTOWN, N. Y., says: "I have a fine, up-to-date poultry farm and raise White Leghorns exclusively. I want to say that after trying many feeds in the past five years I have at last found the kind that cannot be beat. Globe Feeds are the best on the market today."

L. W. WELLS, AMSTERDAM, N. Y., says: "I have been using your feeds for some time and like them very much. My only trouble is that the ——— Co., where I get my feed, tries to push substitutes. I would appreciate it if you could arrange so I could get Globe Feeds all the time."

*There is NO SUBSTITUTE for Globe Feeds

MURRAY McMURRAY

Box 25

WEBSTER CITY, IOWA, U. S. A.

**PRICES FOR 1922
ARE GREATLY
REDUCED**

R. C. CLOVERLAND ANCONAS R. C.

Here is what a pen of 50 Cloverland Ancona pullets did one week before they were six months old

Thursday	Friday	Saturday	Sunday	Monday	Tuesday	Wednesday
Dec. 8th	9th	10th	11th	12th	13th	14th
19 eggs	27 eggs	19 eggs	26 eggs	23 eggs	33 eggs	29 eggs

This is better than 50 per cent production from mid-June pullets. The above days were cloudy and cold. As for lookers they are there also.

HERE ARE OUR WINNINGS AT THE NORTHERN MICHIGAN FAIR:

First cock, 1 entry; First and Second cockerel, 2 entries; First pullet, 1 entry; First and Second hen, 4 entries. Cockerels on sale now. Orders booked for hatching eggs and baby chicks. Place order early to be sure of delivery.

E. J. & M. E. MacMartin

Lake Shore Drive

Escanaba, Mich.

lacing. First and second cockerels, frosting on breast. First cock, well laced breast and back; good wing bow. Second cock not as clear on surface of hackle or as good in wing bar. Third, another good cock. Judge Walter Young laid emphasis on open diamond shaped saddles in males. First pullet, good Wyandotte type; nice lacing. Second, longer back, slight frosting.

Golden Wyandottes—N. Malott, Tunnelton, Ind., 2 cock, 2 hen, 3 ckl., 1 pl. Wm. Stewart, 3 cock, 1 hen. J. S. Pennington, Plainfield, Ill., 1-4 cock, 1-2 ckl. A. C. DeSmidt, Racine, Wis., 2 pl.

Improvement here. Cockerels have well-laced backs. Cock good breast and fluff. Females rich ground color, fair lacing.

White Wyandottes—L. J. Demberger, Stewartville, Ind., 1-3-4 cock, 3-5 hen, 1-3-4 ckl., 1-3 pl., 1 old pen, 1-3 young pen. C. D. Smith, Lyons, Iowa, 3-5 cock, 4 hen, 2 pl., 3 old pen, 5 young pen. Cabeen-Denton White Wyandotte Farm, Stamps, Ark., 1-2 hen, 2 ckl., 4 pl., 2 old pen, 2 young pen. Otto Newlin, Georgetown, Ill., 5 ckl., 5 pl. Whitney & Werderhoff, Toledo, Ohio, 4 young pen.

First cock, big, broad bird, good head, nice front; tail grown and not bobbed off as formerly seen at Chicago. Second, well rounded; a good Wyandotte. Third, shy in breast and tail. Fourth, pinched in tail. First hen, splendid Wyandotte. Second, similar. Third, larger hen; loose in fluff. Fourth, legs too far back; tight tail; stringy feathers in cushion over tail. First cockerel, well set bird; good breast and back; well finished. Second, broad and square at shoulders; elegant character of feather; will make great cock. Third, younger; full of quality. First pullet, too loose in feather. Second, square shoulders, smooth lines; trifle high in tail. Pullet 508, Smith, would look better in this prize pen. Third, fine head, nice type; improvement in spread or tail.

Buff Wyandottes—Chas. Howison, Sandwich, Ill., 1-2-3 cock, 1-2-5 ckl., 5 pl., 1 old pen, 4 young pen. Culver & Warren, Sandwich, Ill., 4-5 cock, 2-3-4 hen, 2-3 old pen, 1-2 young pen. B. Hazelton Smith, Niles, Mich., 1-5 hen, 4 ckl., 1-2 pl., 4 old pen, 3 young pen. Ralph E. Larson, Elgin, Ill., 3 ckl., 3 pl. Floyd A. Diedrich, Rush Lake, Wis., 4 pl.

First cock, strong, broad, round; level buff; tail missing. Second and third, good cocks; latter having spread and covering of tail. First hen, smooth colored, well formed. Second, another well-built hen. Third, ruffier feather. First cockerel, beautiful Wyandotte; correct back, tail and underline. Second, big; tail not covered. Third, same color in tail coverings as on back; tone lighter than winner. First pullet, good type, smooth color; clear tail. Second pullet, tight in tail.

Partridge Wyandottes—Culver & Warren, 1-2-4 cock, 1 hen, 2-5 ckl., Sheffield Farms, Glendale, Ohio, 3-5 cock, 2-4-5 hen, 1-3 ckl., 1-2-3 pl., 1-3 old pen, 1 young pen. W. L. Bender, Angola, Ind., 3 hen, 4 ckl., 2 old pen. John H. Murphy, Geneseo, Ill., 4-5 pl.

First cock, none too large; poor comb. Second, good type; coarse points on comb. Third, not the best condition. Fourth and fifth, dark. First hen, coarse face; legs far back, throwing up shoulders; elegant penciling; good comb. Second, better balanced hen; tight in tail. First cockerel, beautiful bright color, well finished tail; good head and round back. Second, another well-built bird; nicely striped; tone stronger in ground color. First pullet, at head of class; type, color, penciling right; good head. Second, darker. Third, lighter.

Black Wyandotte—Ed. Reilly, Maywood, Ill., 1 ckl., 1-2-3 pl. Small size; round pails; little interest here.

S. C. Rhode Island Reds—E. W. Mahood, Webster Groves, Mo., 4 cock, 1 hen, 1-4 ckl., 1-2 pl., 1-2-5 old pen, 1-2 young pen. E. L. Boehm, Ft. Dodge, Iowa, 1-3 cock, 3-5 hen, 4 pl., 3 old pen, 3 young pen, Red Cloud Poultry Farm, Cincinnati, Ohio, 2-5 cock, 2 ckl. W. H. Laabs, Waupaca, Wis., 4 hen, 5 pl., 4 old pen. J. D. Veach, Helena, Mont., 2 hen, 3 pl., 5 young pen. J. F. Craig, Danville, Ill., 5 ckl. John Greenwood, Geneseo, Ill., 3 ckl. H. A. Fischer, La Crosse, Wis., 4 young pen.

First cock, good type and head; level rich color. Second, higher in shoulders, not as hard feather, more red in tail coverts. Third, another strong cock of superior quality. Fourth, good type; trifle black at base of hackle. Fifth, showy male; falling in comb. First hen, the outstanding Red female of the show. Here is smooth, bright face, true Red type over back, tail and underline; smooth feather of a lustrous rich tone. Second, shade smaller; fails to winner in hard, smooth web of feathers. Third, on type of first, but fails to winner in black at base of hackle. Fourth, legs set too far back; coarse, gamey faced. All the competition in cockerels that anyone wants; here is size, type, and color. Winner has length, balance on legs, finish, level rich color. Second, same kind of a bird; better in comb, perhaps not quite as hard a feather or well finished over tail; close runner up. Third, again type, size, and color. To judge such birds, they must be

The Egg is $\frac{3}{4}$ Water

Heavy Drinkers are Heavy Layers

Each hen must drink one-fourth pint water every day to produce high priced winter eggs. *Water must be warm.* Hen's temperature is 110 degrees F. Don't let your hens drink ice cold water a single day this winter, for it will chill to the bone and may stop egg production a whole month. Why permit unnecessary loss when the

EUREKA Sanitary Non-Freezing FOUNTAIN

KEEPS WATER WARM 24 HOURS

No lamp, no fire, no danger. No upkeep. No trouble. *Only up-to-date Sanitary Fountain.* Drinking cup does not project beyond outer can. No possible chance to catch litter or filth. No contamination to cause disease. *Water always warm, clean and pure.*

Made of heavy galvanized iron. Built like fireless cooker. Works like thermos bottle. Simply fill every evening with hot water—that's all. Hens will have plenty of pure, clean, warm water early in the morning just when they want it and need it most.

Water is a natural tonic just as important as feed. Get full value from high priced feeds. Increase egg production and profits by keeping warm water before your hens all the time.

The heavy drinkers are heavy layers. 100 layers will drink 12 to 15 quarts of water a day. Just think of it! The egg is three-fourths water! Every hen you have must drink one-fourth pint water every day or she cannot produce. Only warm water can be consumed in this quantity, in cold weather. *The water must be as nearly*

clean, pure and fresh at all times as the water you drink yourself. This cannot be done with open containers. The *Eureka Sanitary Fountain* is not a luxury. It is a necessity—a year round fountain. It keeps warm water warm in winter and cold water cool in summer.

Winter Eggs Bring Big Profits—Get ready now to make these profits. Eggs are now rapidly going up in price. Winter eggs are more than double the summer price. If you get three-fourths as many eggs in winter as you do in early summer you can make four times as much money, for the profit will be infinitely greater. Anyone can make a hen lay in springtime. Only proper care will make them lay when eggs are high.

Money Back Trial Offer

You can't afford to be without the "Eureka." It pays for itself in 30 days. Lasts years. Thousands of satisfied users. Order today for you take no risk—no chance whatever. If you are not absolutely satisfied that it's the best fountain you ever saw or used, or if you are not entirely satisfied in every way, you get your money back. *Order direct from this ad today. Don't put it off. It means greater profit to you, more eggs than ever before, a healthy, happy, money-making flock. Order at once—NOW!*

Note These Pre-War Prices

Made in three sizes as follows:

- | | |
|--|---------------|
| 2 gallon size, 15½ inches high, 13 inches diameter, 15 lbs. weight | \$3.75 |
| 3 gallon size, 18 inches high, 14 inches diameter, 20 lbs. weight | \$4.25 |
| 5 gallon size, 22 inches high, 15 inches diameter, 30 lbs. weight | \$5.50 |

TERMS: Cash with order. We open no accounts and proper remittance must come with all orders in every instance. In this way we can quote these low prices.

Could Not Get Along Without "Eureka" Fountain

Gentlemen: I am writing to say that I purchased two of your Eureka Non-Freezing Poultry Fountains and they proved entirely satisfactory. They are certainly fine. I could not get along without them now.—Freeland Irish, R. R. 1, Royal Oak, Mich.

Provides Good Water at All Times

Gentlemen: Your Eureka Fountain has been in use now for several months. It is a great convenience as it provides good water at all times with very little bother. It should last a long time for it appears to be well made.—H. L. Doty, Linn Grove, Iowa.

Entire Satisfaction Both Winter and Summer

Gentlemen: Your Non-Freezing Poultry Fountain has given entire satisfaction both winter and summer. Should not like to do without it.—R. E. Pethick, Payntelle, Pa.

More Than Pleased—Good Year Around

Gentlemen: Last April I bought three of your Eureka Fountains and I am more than pleased with same, they are good the year around. I want more of them soon.—G. Y. Posey, Nash, Okla.

Perfectly Satisfactory—Orders Another

Gentlemen: Having used one of your Non-Freezing Fountains for two years I find it perfectly satisfactory. In fact I liked it so well I purchased another last spring and am getting good results.—H. Clay Beittler, East Millstone, N. J.

America's Five Greatest Poultrymen Use the Chicago Brooder

Successful, money-making poultrymen use and recommend the Chicago Brooder. They must have results. They must raise all healthy chicks. They must have a brooder that gives no trouble, requires the least attention, costs the least to operate. That's why they use the Chicago Brooder.

Positive Automatic Control

The Chicago Brooder is positively automatic. Burns evenly. No wick, no smoke, no gas or dangerous vapors. No trouble, no adjustments necessary. Automatic oil control positively will not fail. Always a uniform heat. Safe and dependable day and night. Produces better and healthier chicks that develop into prolific winter layers. Take no chances—order a Chicago Brooder today on thirty days trial—our money-back guarantee protects you. It's the greatest brooder on the market today. It has stood every test and is guaranteed to give satisfaction or money refunded.

TEN REASONS WHY YOU SHOULD BUY THE CHICAGO BROODER

1. Automatic Regulator Endorsed by Leading Engineers.
2. Requires Absolutely No Attention.
3. One Filling Will Last from Ten to Twenty Days.
4. Finest American Standard Burners.
5. Produces Twice the Heat of Any Other Oil Brooder.
6. Tank Capacity 5 and 10 Gallons.
7. Better Quality of Material.
8. Has Every Brooding Perfection.
9. Lowest Possible Operating Cost.
10. Lowest Priced Brooder Today.

WRITE TODAY. Send for our big illustrated folder now. It tells how The Chicago Brooder is made, why it is the best brooder on the market at the lowest price. It contains valuable information that will show you how to make more money this year. It will pay you to answer this adv. right now.

CHICAGO BROODER CO.

EIGHTH FLOOR—DEPT. 16

20 East Jackson Blvd., CHICAGO, ILL.

put together and carefully compared in good light. First pullet, same smooth face, smooth surface of plumage and good type as first hen; elegantly covered tail, a thing few Red females have; one rich tone of lustrous color all over, including breast and sides of body; uncommonly deep, strong undercolor. Second, not quite as hard webbing; as red in fluff as back; splendid type. Third, fails to winners in lighter neck. Fourth, a big, superior pullet in type; failing with small trace of ticking on wing bows.

R. C. Rhode Island Red—Glen R. Brown, St. Joseph, Mich., 3-4 cock, 3 hen, 3 ckl., 1-3 pl., 2 old pen. J. D. Veach, 1-2 cock, 1-4 hen, 1-2 ckl., 1 old pen. Clarence Hewes, Indianapolis, Ind., 5 cock. Geo. E. Haynes, Swanton, Ohio, 2 hen; 4-5 pl. Mrs. E. C. Lindstrom, Wilcox, Neb., 5 hen, 4 ckl., 1 young pen. L. C. Knorr, Detroit, Mich., 5 ckl. Lee W. Fox, Brookville, Ohio, 2 pl. Geo. Clausung, Delaware, Ohio, 2 young pen.

Big size in cock class; first and second hens, not as smooth feathered as we like. First cockerel, a real Red in type. There has been tendency to shortness in rose combs. First cockerel an advance that comes from the far Northwest. This is worthy of special note as we are all accustomed to advanced quality in most all breeds moving from the east to the West. Second cockerel, uniform colored bird, and only needs more growth of tail to come with age to go ahead of winner. First pullet, big, long, well stationed; strong head; hard surfaced feather; an outstanding pullet. Second little long in beak, but same nice feather. Third, similar to first, but not quite as horizontal in back and tail.

R. C. Rhode Island White—T. D. McAuliff, Lyons, Iowa, 4 cock, 2-3 hen, 2-4 ckl., 2-3 pl., 1 young pen. O. W. Binder, Fort Wayne, Ind., 2-3 cock, 1 ckl., 1 pl., 2 young pen, Martin Norburg, Franklin, Neb., 1 cock, 1 hen. L. A. Holt, Stevensville, Mont., 4 hen, 3-5 ckl., 4 pl. Arthur J. Ginter, Maywood, Ill., 3 young pen.

Here is good breed type. First cock completely distinct from White Wyandottes; a superior bird. Second, rounder back; fails in comb. Hens need further work. Fourth, round and short. First cockerel, like first cock, superior bird, having length, station, balance and good color. First pullet, again good. Second not so long.

S. C. RHODE ISLAND WHITE—O. W. Binder, 1 hen, 1-2 ckl., 1 pl., 1 young pen. L. A. Holt, 2 hen, 3 ckl., 2 pl. Fail decidedly to the Rose Comb Whites. Ordinary chickens in Single Comb Whites.

Buckeyes—Chas. W. Happ, Rockford, Ill., 1 ckl., 2 pl.

Russian Orloffs—Dr. M. A. Hansen, Osage, Iowa, 1-2-3 cock, 1-2-3 hen, 1-2-5 ckl., 1-2-3-5 pl. Elliott & Forbes, Grand Meadow, Minn., 3-4 ckl., 4 pl.

Improvement here. First cockerel has red breast, opening the way for more fine red females. Splendid beards and muffs on pullets. First to third have mahogany hackles. Fourth pullet, orange at base of hackle, which will lead to more two colored males. First and second cocks, first and second cockerels upstanding birds; high in shoulders, giving bizarre character much desired. Third and fourth cockerels, soft in feather.

Buttercups—Dr. M. A. Hansen, 1-2-3 pl. All marked right; a fine trio.

Light Brahma—O. L. Putnam, Harvard, Ill., 3 cock, 3 hen, 4-5 ckl., 2-4-5 pl., 1-2 old pen, 1-2 young pen. Oscar L. Clogg, Berea, Ohio, 4 cock, 1 ckl., 1 pl. Lora Vandiver, Franklin, Ind., 1-2-5 cock, 4 hen, 3 pl. Folly Farm, Libertyville, Ill., 5 hen, 4 old pen. J. S. Hawkins, Waco, Texas, 1 hen, 3 old pen, Fairview Farm, Portland, Maine, 2 hen, Oscar Grow, Waterloo, Iowa, 2-3 ckl.

First cock, big, magnificent bird, splendid hackle, good back and tail. Second, close runner up. Third, rich colored bird; trifle high in shoulders. Hens not as good as we would like. First standing head of class with strongly laced neck, and tail; darker in undercolor than used to win here. Second, good hen; rather heavier cushion on back. First cockerel, bad fold of wing; short tail; large; good color. Second, younger; broader feather would improve appearance. Pullets as a whole lack squareness across shoulders; how can you breed broad shouldered, heavy fronted males from round shouldered pullets? First, well built; good color; a good selection. Color of pullets shows improvement.

Black Langshans—M. S. Barker, Thornton, Ind., 2-3 cock, 1-3 hen, 2-5 ckl., 1 old pen, 1 young pen. Geo. Cooke, Racine, Wis., 1-4-5 cock, 2-4 hen, 1 ckl., 1-5 pl., 2 old pen, 2 young pen. Chas. D. Spencer, Glencoe, Ill., 5 hen. R. L. Gill, Spencer, N. C., 3 ckl., 4 pl. L. S. Farquhar, Jamestown, Ohio, 4 ckl., 2-3 pl.

Big Class, good quality throughout. First cock, fine big bird. Second, longer main tail feathers; too big to show off in his coop; our choice. First hen, high class Langshan in every particular when shaped up. Second, big hen, in splendid plumage. Third, naturally fine carriage; an unusually well-formed hen of beautiful color. First cockerel, big and good. Second, younger,

QUALITY BABY CHICKS

20,000 BREEDERS, bred exclusively for high egg production, and standard qualities. Every fowl selected by the Hogan Test. Our Leghorns, Rocks, Reds, Orpingtons, Wyandottes, and Anconas bred to capacity of 200 egg hens.

What a Few Customers Say

North Star, Mich., May 5, 1921.
Rec'd the 500 chicks this morning all O. K. and full count. I will say they are the liveliest and most healthy chicks I ever saw. Want 500 more June 7th.
Cecil Boves.

Hill Crest Farm, Streeter, Ill.
I rec'd the 500 chicks. They are now ten days old and lost only 4. They are fine husky bunch. Am well pleased and write this in appreciation of your service.
M. B. Meils.

Cowgill, Mo., May 2, 1921.
Rec'd the 1600 chicks O. K. with only 2 dead. They are doing fine and dandy. Raised 95 per cent so far, nearly feathered out already. Will be productive layers. Make price on 1000 more.
Turyman Snider.

WE HAVE TWO GRADES.

Grade A—Are from selected birds of the Egg Basket Strain. Mated to Pedigreed males of high record dams. Undoubtedly one of the finest matings in the country. Same blood lines as our Laying Contest Winners. Price \$22 per 100, \$20 in 500 lots or more. Grade B—Are same Egg Basket Strain as Grade A; are not so closely typetested and selected as Grade A and not mated with Pedigreed males. Price \$17 per 100, \$16 in 1,000 lots or more. 10 per cent deposit holds your order and assures delivery when you want them.

Guaranteed safe 100 per cent alive delivery. Parcel Post paid to your order. Shipped safely to any state east of the mountains.

ECONOMIZE — Buy the "SUCCESSFUL" Of All Standard Makes Lowest in Price — HIGHEST IN EFFICIENCY

"That's the secret of our success" say thousands of owners of "Successful" Incubators. Here is the incubator with something more than the ordinary incubator construction.

It is a cabinet-made machine—built to give you not only the biggest possible returns from every hatch, but many years of successful service. Remember, the profits in getting those early chicks in only one or two hatches, will more than pay for the extra quality construction you get in

"SUCCESSFUL" Incubators and Brooders

Now is no time to experiment or try to get along with a makeshift machine. Why not be sure of a money-making success this year with a "Successful" machine?

Write for My Money-Saving Offer

Don't overlook the fact that "Successful" Incubators have had 29 years of experience and have always been the stand-by of the biggest money-makers in the poultry business.

Poultry Lessons FREE to every buyer of a "Successful" Incubator or Brooder. Famous little booklet, "Proper Care and Feeding of Chicks, Ducks and Turkeys," sent for 10 cents. Big catalog is free. Send for it.

Artificial Light

Makes a greater net profit at a lower cost than anything else you can buy.

Hens must have 12 to 14 hours' daylight to eat enough and to exercise enough to produce high price winter eggs. This portable light makes daylight at a cost of less than one-half cent an hour.

Portable 300 Candle-Power Light

Makes brighter, whiter, more brilliant light than electricity. Burns kerosene or gasoline. Costs less than one-half cent per hour. No odor. No smoke. No wick to trim. No chimney to clean. No carbonizing. Storm, rain, sleet and snow proof. Easy to carry, hang up, or place anywhere.

Made of heavy metal, nickel plated. Shines like mirror. Has special reflector top; throws light down equally all over room. Automatic tip cleaner prevents clogging of dust from fowl's scratching. Can adjust light high or low. One light sufficient for 100 fowls, or house 18 by 18 feet.

This is the only light of its kind on the market that will give you absolute satisfaction. Carbon will positively not collect in the generator. No other lantern gives such a uniform distribution of light; and that is what counts in the hen house.

Write for Free Circular and Price Today

Give your fowls 14 hours' daylight. Keep this light burning in your poultry house morning and night. Nothing will pay you better. The days are still short. You will need lights three months yet. It will pay you to answer this ad today.

WILLIAM N. OTTO

5425 College Ave.

INDIANAPOLIS, IND.

and with age will be magnificent Langshan. Third, big bird, tail not covered. First pullet, a real Langshan, falling slightly in comb. Second, again great type. We feel that following these pullets, 851, Barker, should have been recognized. Both third and fourth are big but tight in tail. No. 851 was young.

S. C. Dark Brown Leghorn—Carl W. Kidd, Cedar Rapids, Iowa, 4 cock. Earl Young, Fairbury, Texas, 5 cock. W. G. Warnock, Geneseo, Ill., 3 cock, 1 hen, 2 chl., 2 pl., 2 young pen. J. H. Larsh, Dayton, Ohio, 2 cock, 3 hen, 3 chl., 4 young pen. Hether Farm, Portland, Ind., 1 cock, 5 hen, 1-4 chl., 1 pl., 1 old pen, 1 young pen. Will C. Does, Lostant, Ill., 4 hen. A. S. Miles, Plainfield, Ind., 5 chl. W. F. Rolf, Zumbro Falls, Minn., 5 chl. D. E. Doig, Sixteen, Mont., 3 pl. H. C. Adams, Lynchburg, Va., 5 pl. G. S. Korell, Columbus, Ohio, 4 pl. Dean Theobald, Williamsville, Ill., 2 old pen, 3 young pen. Leaman D. Rau, Latham, Ill., 5 young pen.

S. C. Dark cocks, show size, length, finish of tail. First cock not as much station as some, but so many points in Brown male that award cannot be placed on one point. First dark hen, splendid sweep of back and tail, clean, bright hackle that suggests good top color in her cockerels. First cockerel, good head, back, tail, station; same shade red over neck, wing bows and saddle; glossy black stripe that stops short of end of feather; with green sheen in all black parts. First pullet, similar to first hen in color of neck; beautiful exhibition pullet in comb and type. H. V. Tormohlen entered as Hether Farm.

S. C. Light Brown Leghorn—Russell R. Stauffer, Wooster, Ohio, 3 cock, 3 hen, 1 chl., 1-5 pl. Dr. O. G. Grady, Orrville, Ohio, 5 cock, 5 chl. Hether Farm, 1-4 cock, 2-4-5 hen, 2-4 chl., 2-4 pl., 1 old pen, 1 young pen. A. S. Miles, 2 cock, 1 hen, Will C. Does, 3 chl. Wm. Marold, Sheboygan, Wis., 3 pl. W. G. Warnock, 3 young pen.

Light Brown males attractive to any artist who appreciates blends of color and knows nothing of established tendency in chickens toward levelness of color in all males. Glad to see this male encouraged. It is a pleasure to see such quality throughout light females, and to note such competent sorting and placing on the part of a judge. Anyone who thinks the light is weaker than the dark should see the good type and substance in hens and pullets, and the large, strongly masculine males shown here.

R. C. Dark Brown Leghorn—Kerlin Farm, Pottstown, Pa., 1 cock, 1-2 hen, 4 chl., 2-3 pl., 1 young pen. Gus Stadler, Altoona, Pa., 2 cock, 3 chl. The Modern Poultry Yards, Orrville, Ohio, 5 chl., 2 young pen. Otto Chastain, Mitchell, Ind., 1-2 chl., 1 pl. More and better than heretofore. First, second cock, first cockerel, good males; good size, type and color.

R. C. Light Brown Leghorns—Otto Chastain, 1 cock, 2 chl., 4 pl. Gus Stadler, 3 cock, 3-4 hen, 1 chl., 1-2 pl. Modern Poultry Yards, 5 hen. Kerlin Farm, 1-2 hen, 3-4 chl., 3-5 pl.

In pullet bred, nice color and type. Fifth, hen, disgrace. Such bird should not be awarded a ribbon in a national show, even though there is no competition. First Light pullet, spike sunk in comb; beautiful bird otherwise. If comb is worth 10 points of the hundred then cork comb is bad in a Leghorn.

S. C. White Leghorn—Hillview Farm, Bend, Ill., 1-2-5 cock, 1-2 hen, 1-3-4-5 chl., 1-2-3-5 pl., 1 old pen, 1-3-4 young pen. Warren's Farm, Webster Groves, Mo., 3-4 cock, 3-5 hen, 2 chl., 4 pl., 1 old pen, 2 young pen. Geo. B. Ferris, Grand Rapids, Mich., 4 hen, 2-3-5 old pen, 5 young pen.

Double coops for cocks. Some cocks not placed here would win any show in West. First cock starts with neat, 5-point comb and ends with broad sickles on elegant finished tail. No break in this bird's back; too much saddle for him to ever stick his tail up through it. Bird stands on strong legs, set apart. Second cock, rangier built bird, tail not as well finished; same broad tail coverts and abundant saddle; sire of first young pen cockerel. Third cock, lower set than second; longer in wattles; otherwise similar. Fourth cock, elegant head, nice tail; wings longer than body; lacks underline. Fifth, big cock; firm comb, heavier texture; tail needs little more time to finish. A dozen cocks in this class that are big, strong birds; nothing else has a chance. First hen a model; never tired, always right. Underline rounded as well as top line. Could fan out her tail like a fan-tail pigeon. Plumage on back, at base of tail, deep and heavy. Second hen, similar, except comb straight and tail closer together. Third, another beautifully plumaged, well modeled hen. Fourth, smaller. First cockerel subject of much favorable comment; choice of number judges; well modeled bird with no excess anywhere from which to deduct. Second well modeled bird, good size and proportions, lacks broad furnishings at base of tail. Third, fails to winners in comb wrinkle over beak. Fourth, needs time to grow. Fifth, great bone;

SPROUTED OATS EGGS

the egg yield will always be increased. This increase is not due to drugs or stimulants that soon destroy the hens, but is the result of the vitalizing, energizing, living sprouts that contain in their nascent state the food elements, not medicines, that the hen needs to form eggs. Sprouted Oats also conduce to a high degree of egg fertility. Young chicks fed germinated grains—starch changed to vegetable milk and grape sugar, make rapid growth and are less subject to disease. Hence the best investment you can make in the poultry line—an investment that pays a dividend every month in the twelve, is a

Sprouted oats, or wheat, rye or barley, are now generally accepted as pre-eminently an egg producing feed. It matters not on what ration the hens are fed or how well they may be laying, if fed also the sprouted grains

CLOSE-TO-NATURE VAPOR-BATH GRAIN SPROUTER

Our sprouters produce the succulent, vapor-bath sprouts with their vegetable milk, grape sugar, and other easily assimilated ingredients so essential to egg production. They cut down the feed bill and run up the egg yield. From 1 bushel of grain they make 2 to 4 bushels of the very best of egg-producing green feed. They germinate grain in 20 to 30 hours and force growths of an inch or more daily. The Grain Sprouter business was originated by the CLOSE-TO-NATURE Company, Mr. W. H. Mouroe, its manager, invented and put on the market the first, the original sprouter a dozen years ago and is still at the business. Hence we are the oldest and also the largest manufacturers of sprouters in this country. We know how to make an efficient and practical sprouting machine. We make all kinds to suit all conditions and climates, and many sizes from 1-4 bu. to 8 bu.; for a few hens or a 1000. GET OUR CIRCULARS GIVING FULL INFORMATION ON SPROUTED OATS AND EGGS.

CLOSE-TO-NATURE COMPANY - 38 Front Street - COLFAX, IOWA

1889 Parks' BRED-TO-LAY AND-DO-LAY Barred Plymouth Rocks Are Now Celebrating Their Thirty-Third Anniversary

And are justly conceded to be America's Oldest and Greatest Laying Strain. The early history of our strain shows that in 1889 sixteen hens averaged but 96 eggs a year. Since then by careful selection, Trapnesting and Pedigreeing, we have produced hens that have layed more than that many eggs hand running.

Today our Strain Rocks have made and hold about all the world's Rock Records with individual records up to 313, 323, and 325 eggs. Continuous laying records 148 eggs 148 days, 186 eggs 192 days, 400 eggs 448 days.

Small flock records averages up to 271 eggs, while flocks of 126 hens averaged 208 eggs and pullets laying at 113 and 114 days old.

And better still, over 30 lbs. of favorable reports from customers from all over the World, where our chickens have been kept in all kinds of climates, houses and feeding methods. We've aimed to bring the Egg Basket and the Standard of Perfection into closer relationship, and our birds as a whole are both Beautiful and Useful. NO MORE FEMALES TO SPARE. STILL HAVE A GRAND SELECTION OF COCKERELS, BUT THEY WON'T LAST LONG. BOOKING EGG AND CHICK ORDERS NOW.

Harry Lewis says

"EVERY POULTRYMAN SHOULD USE Semi-Solid Buttermilk"

Morgan Park, Ill.
Buttermilk Producers Inc.
Chicago, Ill.
Gentlemen:

The barrel of Semi-Solid Buttermilk arrived safely ten days ago. I was over three weeks without the Buttermilk and during that period the laying of my chickens fell off nearly 70 per cent. After using Semi-Solid for the last nine days they are again laying nearly as well as before. I know the cause of the laying "come back" is due absolutely to the buttermilk—for when I was short the Buttermilk I fed them in every other respect just the same. The only difference in the feed that they are receiving today is the addition of Semi-Solid. Semi-Solid Buttermilk certainly makes eggs.

Yours respectfully,
BROOKS SANITARY
HENNERY
(Signed) Wil-on Brooks.

Without this Label It Is Not
Semi-Solid Buttermilk

Semi-Solid Buttermilk Makes More Winter Eggs

You get more eggs just as soon as you begin feeding Semi-Solid Buttermilk. Many poultrymen have doubled their winter egg yield by adding limited quantities of Semi-Solid to their grain ration. Not only do your hens lay more, but you get the eggs when prices are high and most flocks aren't laying. Hens fed Semi-Solid Buttermilk lay larger eggs that sell for more money.

By feeding Semi-Solid Buttermilk you get dollars instead of cents for each bushel of grain fed. It helps you to cash your grain into the largest possible yield of high priced eggs. With it, every hen in your flock lays regularly all winter. There are no sick or "boarder hens" to cut down the egg yield in a flock fed

Semi-Solid Buttermilk

Prof. Harry R. Lewis has conducted an exhaustive, comparative test to determine the value of Semi-Solid Buttermilk in the raising of poultry from the brooder through the laying season. Over 1,800 birds were used, and detailed scientific observation made. His report and conclusions contain a number of fundamental discoveries of utmost importance to every thinking poultryman. You need this report. It means more eggs and greater profits to you. The complete results on this test of feeding chicks, growing stock, and the laying flock, together with Prof. Lewis' own conclusions, will be sent you on request.

Thousands of poultry raisers depend on Semi-Solid. They know its value—let us prove it to you. Semi-Solid Buttermilk is shipped in barrel lots, freight prepaid. There is a size package for every flock.

Send for Free Sample

Write TODAY for your free sample of Semi-Solid Buttermilk and Prof. Harry Lewis' complete report on the value of Semi-Solid Buttermilk for poultry. Please give your dealer's name and address when writing. A postal card will bring it to you.

SOLE SELLING AGENTS

110 So. Dearborn St. Room 716-A Chicago, Ill.

back and tail couldn't get out of shape; selected by some to win first but being big boned bird is little heavier in lobe and comb than winners. Gloeckl is getting bone and holding style and breadth of covert and sickle feather, with fullness of covering, that gives distinctiveness to his line. Such substance of body reminds one of days when Dan Young showed fine-turmed, 7-lb. cocks in New York to the wonder and applause of breeders. First pullet; the range, size and style of a great Leghorn; judge overlooks her 7-point comb and places her in preference to any other one of the 30 odd entrants. First, second and third pullets weighed 10 days before show; 4½ lbs., 5 lbs., 4 lbs. 4 oz. each. Flat shoulders, strong beaks, prominent eyes on these pullets; large without loss of style. By close examination, more back feathers on second pullet than on 2nd R. C. White Leghorn hen directly opposite across aisle. Second S. C. pullet had back feathers 4½ inches long, web at widest part, 1¼ inches wide. Feather from second R. C. W. Leghorn hen 3 inches long, web ¾ inch wide. This is the mechanical reason why Hillview pullets cannot stick their tails up; their back plumage is too heavy; and why their backs feel like a feather bed without delusion or snare. It also accounts for the broad feathers at base of tails of the males that are bred from this line. Every age has its master. Gloeckl reigns supreme at Chicago, 1921.

R. C. White Leghorn—Geo. A. Rigler, Bentonsport, Iowa, 1-2 cock, 1-2 hen, 1-2-3 chl., 1-2-3-4-5 pl., 1 young pen. John J. Peters, Belleville, Ill., 1 cock, 3 hen. Warren T. Heaps, Kewanee, Ill., 3 cock, 4 hen, 1 old pen. Mrs. John Hamilton, Mayville, Mo., 4-5 chl. Folly Farm, Libertyville, Ill., 2-3 young pen.

First and second cocks, good team. Third, V-shaped underline. Fourth, fails in comb, furnish of tail. First and second hens, good Leghorns. Third, big, looser feathered, lower set. First cockerel has bone, length and carriage. Second and third, same order; creditable birds. Interesting competition in cockerels, with only one big, coarse comb; better backs and tails than formerly. First, second and third pullets, big, long birds, firm combs; coverts well out on tails.

S. C. Buff Leghorns—Geo. C. Dietz, Poughkeepsie, N. Y., 4 cock, Floyd Purdy, Tomah, Wis., 5 cock, 1-3 hen, 4 chl., 1-3 pl., 1 old pen, 1-2 young pen. Geo. W. Rex, Slatedale, Pa., 2 cock, 1 hen, 3 chl. Wm. E. Crevoisat, Freeport, N. Y., 1 cock, George Gable, Toledo, Ohio, 2 hen, C. M. Herren, La Junta, Colo., 1-2 chl., 2 pl., 3 young pen. M. H. Mann, Woods Cross, Utah, 5 chl. James Buff Leghorn Farm, Ft. Atkinson, Wis., 5 pl., 5 young pen. F. S. Smith, Hamilton, Ohio, 4 old pen. Hillside Hatchery Farm, Holland, Mich., 2 old pen, 4 young pen.

East met West. Some complaint on judging. Large class, divergent views, many kinds of birds. Comb of males held highly important by judge. Two largest, best bodied, best furnished cocks in class, not placed; one large comb, other frozen. First cock, smaller, fine comb, wattles, lobes; smooth color, shown in nice shape. Second, short and low. Third on order of first; trifle larger. First hen, smooth, even color; lacks drum stick. Second, nice hen, better station than first. Third, smaller, low set, poor condition; neat comb smooth color. Fourth hen, clean and smooth, good type. Fifth, on same order; elegant length, correct tail, proper station. First cockerel, beautiful comb, wattles, lobes, eyes. Milo, even shade buff except tail shade darker; good top lines, nice station. Second similar, except tail furnishings not as far along. Third, larger comb, coarser texture, lacks underline, narrows down to small stern. Fourth, young, nice cockerel. Forty-one cockerels, 39 pullets; latter especially even. First will mature low like first hen; beautiful color, long back, full tail, good head. Second, better comb, another elegant sheet of color; whipped tail. Third pullet, tone of green in shanks.

S. C. Black Leghorns—J. Michael Huber, Marysville, Ohio, 1 cock, 1 hen, 3 pl. Tip Top Farm, Evans City, Pa., 2 cock, 2-3 hen, 2-4 chl., 2-5 pl., 1 young pen. Sunny Slope Poultry Farm, Danville, Ill., 1 chl., 1 pl. J. W. Farber, Sandyville, Ohio, 3 chl., 4 pl.

Small showing. First, cock needs more station; a nicely furnished bird. First, good hen. First cockerel, little angular. Second, smaller; pure yellow shanks. A half dozen nice pullets, making competition.

Silver Leghorns—J. W. Farber, 1 chl, 1 pl. Nice cockerel; fair pullet. S. C. Black Minorca—Chas. G. Pape, Fort Wayne, Ind., 1-3-4-5 cock, 2-4-5 hen, 2-6 chl., 1-4 pl. 1-2-3 old pen, 1-2-3 young pen. A. Didricksen, Whitewater, Wis., 2 cock, 1-3 hen, 4 chl., 3 pl. John B. Allison, Gardner, Ill., 1-3 chl., 2-5 pl.

First and third cocks, great team; giants, with strong backs, correct station and tail carriage. Winner excels in firm, smooth comb. Second, fails in contrast with softer comb that twists over beak and red eye; a big upstanding bird, yet lacks length and

BABY CHICK PURE BRED FOR 1922

Bred-To-Lay from flocks selected for standard quality and production we offer exceptional values in the following varieties: Leghorns, Rocks, Reds, W. Wyandottes, Orpingtons, Minorcas and Anconas. The Feed you need to raise Prize Birds

CONSIDER the little chicks on which you pin your hopes for success at the shows; don't give them ordinary, raw feed that is so hard for them to digest—that causes bowel trouble, malnutrition and death.

Follow the practice of successful exhibitors and feed your chicks

H-O STEAM-COOKED CHICK FEED

Saves the Lives of Baby Chicks

It is a scientific combination of grains containing the correct proportions of muscle, energy, bone, heat, blood and feather producing elements required by young chicks. These selected grains are cut to pin-point fineness and steam-cooked for more than two hours. This so prepares H-O STEAM-COOKED CHICK FEED that it is easily digested. Chicks can eat it and get the nourishment they need without danger of bowel trouble and the many kindred chick ailments. Chicks grow and develop in record time.

Last year R. E. Smoyer of Sebring, Ohio, wrote us: "Since using H-O STEAM-COOKED CHICK FEED we have been able to produce more winners and exceptional stock than ever before."

The Pennsylvania Poultry Farm—famous for their prize stock—writes: "This year we have the finest lot of young stock we have ever reared, thanks to H-O STEAM-COOKED CHICK FEED." And many other such letters come to us from enthusiastic users.

Whether you raise prize or utility stock, feed your next hatch H-O STEAM-COOKED CHICK FEED. You will be surprised at the wonderful results it produces.

It is now packed in the handy five-pound package, obtainable at your local grocer; or get a supply from your feed dealer.

Sample of this wonder feed and literature, free on request.

THE H-O CEREAL CO., Inc.
Feed Dept., Desk 10, BUFFALO, N. Y.

finish of tail carried by first or third. Fourth heavy in lobe, light eye, pinched at rump. First hen, splendid plumage, good type. Second, larger hen, bright sheen. Third, lacks lustre of other two. First cockerel, early hatched, well grown and fully finished, good station, long back, elegantly furnished tail. Second, same type, size and color, excels in firm, well-formed comb; fails to win in red eye. Third, another magnificent, big, rangy cockerel. Fourth, another fine big bird; shallow in breast. First pullet, big, typical profile; weak at knees. Second, another good one; stands little narrow. Third, magnificent Minorca; fails to win in eye color.

R. C. Black Minorca—Geo. F. Timmers, Cincinnati, Ohio, 1 cock, 1-2 hen, 1-2-3 ckl., 1-2 pl., 1 old pen, 1 young pen. O. N. Allen, Butlerville, Ind., 2 cocks, 5 ckl., 3 pl. B. R. Cleaver, Milford, Ill., 4 ckl.

Deficient in size to Single Combs. First cockerel, first and second pullet tops of class.

S. C. Buff Minorca—Edw. F. Schmidt, Hazelrigg, Ind., 1-2-3-4-5 cock, 1-2-3-4-5 hen, 1-2-3-4-5 ckl., 1-2-3-4 pl., 1-2-3 old pen, 1-2-3 young pen. Tip Top Farm, Evans City, Pa., 5 pl., 4 young pen.

First to fifth cocks, best full string shown to date; good bone, reach, length. Color shows uniformity, tails well covered and matching. Good lobes on these cocks. Three small hens against the winners; one marked \$5, and looks like it against first to fifth hens, which are real Minorcas with station, length, proportions and even sheet of color. Five such hens have not been seen before. Nothing like first cockerel has ever been seen; firm comb, good length, finished tail, good size and station. Needs larger lobe. Smooth, lustrous buff color. Same size, proportions and even color in second to fifth. Several cockerels left out that would have won other years.

S. C. White Minorca—Mary Meiselbach, Melrose Park, Ill., 1-3-4-5 cock, 2-3-5 hen, 1-4 ckl., 2 pl. Thos. Brodgen, Rush Lake, Wis., 2 cocks, 2 ckl., 3 pl. Hamilton Egg Farm, Rochelle Park, N. J., 1-4 hen, 1-5 pl., 1 old pen, 1 young pen. M. E. Fish, Mound City, Kan., 3 ckl. Tyrone Poultry Farm, 5 ckl., 4 pl.

White Minorcas, outstanding size and Minorca type in cock class, with first leading in immense body proportions and true Minorca characteristics. The same length, size, and station in hens, with the first to fourth hens of quality that would be considered in any class ever penned in America. Quality in cockerels mixed; first, good profile; lacks breadth of shoulders and breast. Second narrows down to narrow rump and tail. Third, firm comb, but coarse texture of head parts. First pullet, splendid. Second, more station but narrow between knees. Third, narrow head and rump.

Lakenvelder—Arthur F. Dau, Lombard, Ill., 1-2 cock, 1-2 hen, 1 ckl., 3 pl. Baldwin Gerhard, 1-2 pl.

First cock and first pullet sound black heads, necks and tails, with white bodies; nice quality.

White Face Black Spanish—Frank Miller, Crestline, Ohio, 1-2-3-4 cock, 1-2-3-4 hen, 1-2-3-4-5 ckl., 1-2-3-4-5 pl. J. W. Freisner & Son, Bremen, Ohio, 5 cocks, 5 hen. Clarence Hewes, Indianapolis, Ind., 1 old pen, 1 young pen.

Growing tendency to consider disadvantage of extreme face development. Clarence Hewes leads effort to have stricken out of Standard the injunction "longer face the better." Lobes on male as long as wattles, suits him. He attaches more importance to smooth face, free as possible from wrinkles around eyes. He shows the birds that exemplify his conviction of a useful and distinctive Spanish. Albeit, the winners are not as extreme in face as we have seen in years past. Good bodies and substance of males and females much in evidence here.

Blue Andalusian—A. W. Sperber, Milwaukee, Wis., 4-5 cock, 5 hen, 1-2 ckl., 1-2-5 pl. M. R. Knox, Downers Grove, Ill., 2-3 cock, 4 hen, 3 ckl., 4 pl. Walter C. Dobe, Buffalo, N. Y., 1 cock, 2 hen, 4 ckl., 3 pl. Trout's Poultry Farm, Fostoria, Ohio, 1-3 hen.

First cock, massive body, heavy head appendages; blue tail. Second, more upstanding bird; fails to win in lacing. Third, best head, type and lacing in class; dark in tail coverts. First hen, good type, well laced. Second, blue ground, which judge likes; faint lacing. Third hen, splendid type and lacing; just little rust on shoulder. First cockerel, nice all around bird; tapers off too much at stern. Second, good type and color; trifle high in tail. Third, superior head; good body; tail not finished. First pullet, blue not clear; low set. Second, clearer ground color on back; smoky throat and breast. Third, good type and color. Fourth, best type in class; little weak in lower wing bow.

S. C. Anconas—Frank C. Stier, Lakewood, Ohio, 1-3-4 cock, 1-4 hen, 2-3-5 ckl., 1 old pen, 1 young pen. E. R. Post, Ontarioville, Ill., 5 cock, 2-5 hen, 1-4 ckl., 4-5 pl., 3 old pen, 2 young pen. Otto Berger, South Elgin, Ill., 2 cock, 3 young pen. R. N. Dumlup, Paris, Tenn., 3 hen. F. M.

PLANS FOR POULTRY HOUSES!

All style. 150 illustrations; secret of getting winter eggs, and copy of "The Full Egg Basket." Send 25 cents. INLAND POULTRY JOURNAL Dept. 40 Indianapolis, Ind.

Bauer, Pittsburgh, Pa., 3 pl. Porter F. Ash, Centerville, Iowa, 2 old pen. Stewart A. Peterson, Chicago, Ill., 5 young pen. J. O. Gnagy, Waterloo, Iowa, 4 young pen.

First cock last year wins third. Son of his, third as cockerel at Garden, wins first as cock; strong body, well furnished tail; long in wattles. Second cock, big, good station, long; dark color. Fourth, dark. First pullet last year wins first hen. Last year, as pullet, 80 per cent feathers tipped; this year, as hen, every feather tipped; wings still hold sound. Beautiful type. Second, dark neck, nice type. Third hen still darker; more concave back; trifle lower set. First cockerel, head and body good, well marked; pullets of this line are making records at Illinois egg contest. Second and third, splendid heads, well furnished tails; sound colored birds. First pullet, wonder; good head, length, station, tail; sound wings and tail, beautifully marked with green gloss, fine tipping. Second on same order, failing to winner only in fold of comb. Third pullet out of this class, failing to winners in comb, length and tipping.

R. C. Ancona—E. R. Post, 1-2 hen, 1-2 ckl., 1-2 pl.

Buff Orpingtons—C. S. Byers, Hazelrigg, Ind., 3 cock, 4 hen, 1-5 ckl., 5 pl., 2 old pen, 2-4 young pen, Campbell Soup Farm, River-ton, N. J., 1-2-4-5 cock, 1-2 hen, 2-3 ckl., 1-2-4 pl., 1-3 old pen, 1-3 young pen. Noah Tripplehorn, Ada., Ohio, 3 hen, Wyant Bros., Thorntown, Ind., 5 hen, 4 ckl., 4-5 old pen, Mayslake Farm Hinsdale, Ill., 3 pl., 5 young pen.

Keenest competition in the show. Wonder class all through. First cock, large, massive, one level tone of soft buff from head to tail. Second, an even better balanced bird; richly furnished tail; fails to winner in squareness across shoulders. Third, good build, well furnished tail, lustrous buff color. Fourth, wonderful top in shape and color, heavy comb. Fifth, big front; lighter color than winners. First hen lovely, smooth, even buff all over. Her like has not before been seen here. Second, big hen, tone softer color; legs set farther back. Third, fine color; clean tail; bright eye and smooth face; nothing sluggish about her. Fourth, biggest hen so far. Fifth, big hen, well set; would win in almost any other competition. First cockerel, worthy successor to Byers' Master-piece of last year; good head, comb that will always hold; square across shoulders, giving him breadth which is carried back; heavy bone; well set on legs; one even tone of gold buff from head to tips of sickles. Second, magnificent big bird, beautifully covered tail; even shade of color; little long in beak. Third, again massive body, good width all way back; well set on legs; trifle shorter in back. Fourth, large size but younger and shorter feathered; good head; strong legs well placed; soft, uniform color. Fifth, again good color, breadth and size; fails in underline. A better string of cockerels never put down in America. First pullet, typical Orpington, well set, even color. Second, on same order; trifle harder feathered. Third, younger, but excels other two in having clear tail.

White Orpington—Wm. N. Otto, Indianapolis, Ind., 3 cock, 5 hen, 5 ckl., Morris Poultry Farm, Lebanon, Ohio, 1-2-4-5 cock, 1-2-3-4 hen, 1-2-3-4 ckl., 1-2-3-5 pl., 1-2 old pen, 1-2 young pen. O. F. Wisch, Ft. Atkinson, Wis., 4 pl.

A show in themselves. First cock wins shape special; large, massive bird, white color. Second cock, same order but not as well covered on tail. Third, another well balanced cock. Fourth, softer feathered. Fifth a well-set bird, white color and adds to a fine bunch of cocks. First hen, good shoulders and front, pure white; a wonderful hen. Second, another big hen, broad all the way back; nicely set. Third, legs set farther back. First cockerel, square shoulders nicely set, giving splendid type throughout; Silvery white. Second, well turned out chicken; little longer in back. First pullet, elegant smooth feather; trifle fine in bone; good shape. Second, another nice pullet.

Blue Orpington—Dewey B. Sanderford, Raleigh, N. C., 1 hen.

Black Orpington—Tip Top Farm, 1 cock, 1 hen, Isaac Roberts, Missouri, Mont., 1-2 hen, 1-2 pl. Four first winners worthy.

Speckled Sussex—H. L. Bedford, Bailey, Tenn., 4 cock, 3 hen, 3 ckl., 5 pl. C. A. Campbell, Chicago, Ill., 3 cock. R. E. Hager, Algonquin, Ill., 1-2-5 cock, 1-4-5 hen, 1-4-5 ckl., 2-4 pl., 1 old pen, 1 young pen. A. & E. Tarbox, Yorkville, Ill., 2 hen, 2 ckl., 1-3 pl., 2 young pen.

Tremendous size and substance in cocks. First cock, heavy bone, too much legs for an ideal; nicely ticked over hackle and saddle; good breast color; rich mahogany ground color. Second, lighter ground color in saddle with more striping; beautiful breast. Third, good type; not as big as winners; lacks white tipping on back. Fourth, practically red top, devoid of white. Fifth, smaller; short in back. Hens a beautiful lot. Winner has type and color. Second, big; white splashes heavier. Third,

BASIC FEEDS

FOR POULTRY

Big Winner at Poultry Shows

The "proof of the pudding" was never more conclusively demonstrated that Basic Feeds are 100 per cent efficient, than in the award of the Prize Ribbons at the recent Poultry Shows.

In our advertising we have made claims for Basic Feeds that you may have thought were pretty strong statements, but knowing as we do, that Basic Feeds are made of nothing but the highest grade of choice grains, scientifically proportioned, they could not help but produce the highest results, either in prize winning stock or maximum egg production. Every poultryman knows that the feed which will help him to produce prize winners at the shows will also produce the highest efficiency in egg laying ability.

Winners at the Coliseum Show

At the Chicago poultry show, recently held in the Coliseum, EVERY PRIZE RIBBON offered for White Leghorns was worn by birds raised in the yards of our customers.

When such a sweeping victory as this is accomplished, it certainly bespeaks proof beyond doubt, that Basic Feeds are EVEN BETTER than we claim.

Every poultryman also knows that a prize winning white bird is more difficult to raise than other breeds—the least defect in color of plumage shows more marked and herein lies a secret of the success of Basic Feeds. Being made from WHITE corn and only purest grains, it develops the whitest and most luxurious growth of plumage. To accomplish this it must also develop exceptional physical powers—frame, and vitality.

Basic Feed Winners were not confined to the white breeds. Many of the winners in all breeds were fowls raised from babyhood on Basic Feeds.

Winners at the Milwaukee Show

At the recent Milwaukee Show, where the White Leghorn Club held its national meet, that wonderful 1st cockerel in White Leghorns and the whitest female in the show were from the yards of Basic Feed customers. Our customers also scored heavily in Barred Rocks, White Rocks, etc.

Here also the splendid results of feeding Basis Feeds was clearly demonstrated.

Winners Everywhere

At smaller shows all over the country our customers report winnings—from every part of the country come successful reports resulting from feeding Basic Feeds. But Basic Feeds achievement is not confined to the show rooms, as is evidenced by the ever increasing number of letters from poultrymen everywhere reporting increased egg production, decreased feed bills and healthier, more profitable flocks—all the results of feeding 100 per cent quality Basic Feeds, purchased on our DIRECT FROM MILL to user plan—the plan that is sweeping the country in popular favor.

BASIC FEEDS CO.

Sold Direct from Mill

Cuts Your Feed Cost 20% to 35%

In addition to giving you better results in development and egg laying ability, as shown by results mentioned on preceding page, buying Basic Feeds Direct From the Mill also cuts your feed bills—you buy at cost plus ONE small profit instead of paying several middlemen's profits—you get feed that because of its 100 per cent quality, goes further—many of our customers report a saving of 20 to 35 per cent.

The first point to be considered by the poultryman in buying his feed, should be to ascertain if it is ALL feed—is it made up of ingredients that will go to produce meat, feathers and eggs? Basic Feeds will stand the most searching inquiry—they are just what their name implies—made from BASIC grains, correctly proportioned, properly ground and balanced according to formulas that are recognized as the best. In short, we say to you in all sincerity, that we firmly believe Basic Feeds are

The Best Feeds Money Can Buy

We particularly urge poultry raisers at this season of the year to give Basic Feed Laying Mash a trial—we know the results will be agreeably surprising. Your hens will lay as they never layed before.

It makes no difference what feed you are feeding now, you can change to Basic Feed Laying Mash with positive assurance that no harm will result. On the contrary, you will find an immediate increase in egg production—the only result that can follow placing before your fowls a ration so pure and so rich in egg making materials.

MONEY BACK GUARANTEE

Nothing speaks plainer of our faith in Basic Feeds than our guarantee that goes with every bag—a guarantee that absolutely insures you satisfaction without risking a penny. We say to poultry raisers everywhere—give Basic Feeds a trial—if after feeding them as we recommend you are not thoroughly convinced they are the best feeds money can buy—if you are not perfectly satisfied, just say so and we will send you back your money.

FREE SAMPLE and Money Saving Price List

Fill out and mail coupon and we will send you a catalog folder and money-saving price list telling all about the complete line of Basic Feeds. We will also send you a free sample of Basic Feed Laying Mash. When you receive this sample we want you to compare it for color and texture with other mashes in the market—then we wish you would make this test—pour boiling hot water over it and notice that appetizing flavor—that inherent goodness, that smells just like fresh baked home-made bread. When you make this test you will understand why your hens relish it so eagerly and eat it up so clean—it's because of its purity and genuine 100 percent feed content. Mail the coupon NOW. Get acquainted with Basic Feeds—the big factor for poultry success—whether raising poultry for show room or for meat and eggs.

Everything About S. C. WHITE LEGHORNS

Remarkable Book **FREE**

Remarkable New Book, just off the press, "Everything About S. C. White Leghorns," by A. F. Rolf, Secretary National S. C. W. Leghorn Club, sent free to everybody who mails coupon below. Book tells everything you want to know about S. C. W. Leghorns. 23 subjects, thoroughly discussed. Some are:—

- How to Mate and Breed White Leghorns
- How to Judge White Leghorns.
- How to Condition S. C. White Leghorns for the Show
- How to Wash White Birds
- What and How to Feed Leghorns.
- How to Prepare a Balanced Ration for Leghorns.
- How to Produce a Strain of Heavy Layers.
- How to Increase Egg Production Through the Use of Artificial Light.
- How to Obtain Highest Prices for Leghorn Eggs.
- A Good Dry Mash Formula.
- How to Care for Baby Chicks.
- Home-made Rations for Baby Chicks.
- How to Obtain Best Results Under Farm Conditions.
- How, When and Where to Advertise.

Special Subjects On Poultry Diseases

Special subjects on How to Prevent and Cure Bumble Foot, How to Combat Lice and Mites, How to Treat Diseases of Leghorns. This information worth \$10.00 to anybody.

PATENTS

Poultry patents a specialty Prompt attention. Expert Service. Best Terms Address.

LESTER L. SARGENT, ATTORNEY
524-10th St., N. W., Washington, D. C.

neat tipping, lighter ground color. Fourth, lacks breadth of shoulders; white on head; cloudy color on wing bows. First cockerel, rich ground color of first cock; ideal neat tipping back and saddle. Second, best Sussex body in class. Third, cherry red back with striping, shy on tipping. First pullet, true Sussex type; splendid color and markings. Second, larger, uncommonly free from black shawl around neck. Third, some brown in shanks.

Silver Spangled Hamburg—F. A. Thies, Melrose Park, Ill., 1 cock, 2 hen. Carl T. Gyllack, Elgin, Ill., 1 hen. Herman Huber, St. Louis, Mo., 1 ckl., 1 pl. Ed. F. Heckerman, Hammond, Ind., 1 young pen.

Golden Spangled—Jas. Martin, Maywood, Ill., 1 cock, 1-2 hen, 1-2 pl. Mediocre quality in the Hamburgs; with first and second Gold Spangled hens the tops.

Silver Campine—Frank E. Hering, South Bend, Ind., 1-3 cock, 1-2 hen, 1-2-3 ckl., 1-2-3 pl., 1 old pen, 1 young pen. Kissel Bros., Hartford, Wis., 2-4 cock. College Poultry Farm, Lisle, Ill., 4 ckl.

Considerable comment from judges on advance in quality. First cock, clean, snappy barring, full of green sheen; tail nicely marked; splendid head. Second, white bar too narrow. First and second hen, fine team; quite clear backs; straight barred on throats. First cockerel, nice head, hackle and type. Second, true Campine type, beautifully barred all over; with three weeks' time will make greatest cockerel that ever stood in Coliseum. Third, beautifully finished tail, great barring and sheen, but fails in comb. First pullet, at her best. Second, younger. Compared to feather from famous Claribel, 1914, females are great improvement in barring.

Golden Campine—C. G. Battles, Wellington, Ohio, 1-2 cock, 1-2 hen, 1-2 ckl., 1-2 pl.

First cock, splendid type, nicely furnished tail; clear barring. Second, fails to winner in slightly sooty barring. First hen, good type, clear bars, quite free from mossiness on surface of back. Cockerels, young but good quality. First pullet, nicely barred. Second, crescentic lacing on upper breast.

Dark Cornish—E. R. Scott, Danville, Ill., 2 cock, 2 hen, 2 ckl., 2 pl. R. E. Theinhardt, Helena, Mont., 1 cock, 1 hen, 1 pl. H. Hodgson, Waukesha, Wis., 3-4 hen, 1-3 ckl., 3-4 pl. W. P. Case, Hinsdale, Ill., 2 young pen.

Pacific coast birds have reputation of having more size but also more legs than Eastern stock; however first hen from Montana, well built, richly colored and nicely marked. Second hen not as square across shoulders or narrow at stern. Third and fourth smaller. First cock, well built; little loose in saddle and tail. Second, better top; legs not as wide apart. First cockerel, unusually well built for young male. Second, long tail, more legs. Third, still more legs. First pullet, splendid type, color and marking. Second, better shoulders; tail more open. Third, good type, some single lacing over stern. Fourth smaller; has type; some shafting; weaker lacing.

White Cornish—A. M. Coppage, Hale, Mo., 1 ckl.

CURE FOR EGG EATING.

I have read that the only cure for egg eating is a severed head, but I have had experience that I think is worth passing on. It is cheap and easy, so is worth trying.

Years ago I heard of cutting up writing paper in small pieces and giving it to hens to cure them of egg eating, so when my flock began this pernicious habit I tried cutting paper for them, though I was skeptical as to the result.

I was glad to find that my trouble was over for that year. I have tried it many times since with the same success.

Old letters cut in strips of $\frac{1}{4}$ to $\frac{1}{2}$ in. wide then snipped into small pieces is apparently an ideal diet, for the hens will eat it as though it were the choicest wheat.

It is a good plan to give some occasionally through the winter as a preventive. I have never had hens begin eating eggs when I did this.

I do not understand why it is so, but I suppose the paper in some way fills a want which is unsupplied in their regular food.

Maine. Mrs. Clara T. Sawyer.

FREE THIS SELF-FEEDING HOPPER

To introduce Collis Process Dried Buttermilk and show you how it will double your egg yields even in cold weather—keep all your poultry healthy and increase the weight of birds you want to fatten for market, we will deliver this handy Self-Feeding Hopper free and postpaid to any poultry owner sending only \$1 (check, draft, money order or dollar bill) for four pounds of

ESTIMATING THE YEAR'S PRODUCTION.

By T. S. TOWNSLEY.

The value of a short time record as an indication of the year's production is a thing very much in the minds of poultry keepers at the present time, as so much thought is being given to methods of increasing the laying ability of the fowl. Trapnesting is such a laborious task that most poultry keepers find themselves unable to carry through a complete year's test on their birds and would like to find some method whereby trapnesting for a short time would give a reliable basis for estimating the total production for the year.

Considerable prominence has been given to the winter record as a measure of the hen's producing ability by the work of Dr. Pearl and others, while a good many breeders are strongly in favor of trapnesting during the spring months, so that their chicks can be pedigreed, and claim that the spring record is a more reliable test than the winter production.

Those who favor the winter test point out that the winter season is naturally the most trying on the birds and claim that hens which lay well during the cold months are the birds that have the greatest producing ability and will therefore make the best record for the year.

Those who favor the spring test say that the winter egg record is so greatly affected by the time of hatching, by housing conditions, and by the weather, that it is not a reliable test of a bird's laying ability; while the spring, which is the natural laying season, places fewer handicaps on the birds, and thus they considered that the spring record is the more accurate index of the actual laying ability of the fowls.

Most available records which are cited to prove the reliability of any method of testing come from experiment station flocks and other places where the birds are handled under the best scientific methods of feeding and housing. Since conditions under which farm flocks are managed are often radically different from those on experiment station farms, and since the great bulk of the eggs are produced under farm conditions, the records from the Missouri Farm Flock Laying Contest ought to be of interest in showing what relationship the production at various seasons has to the total production for farm flocks.

For purposes of comparison, the reports from Missouri demonstration farm flocks have been tabulated to show the number of eggs produced during November, December, January and February as the winter record, compared with those laid during March, April and May for the spring production as a basis of comparison for estimating the total year's record. Table I, which follows, shows the percent of the total year's eggs laid during the four winter months and also the percent laid during the three spring months, for the flocks which made the best record in the contest ending November 1, 1920.

WIN \$2500 FOR NEW YEAR

FUN FOR ALL FREE for Everybody CASH Prizes 15

Larger Copies of Pictures Sent Free

FIND ALL THE OBJECTS BEGINNING WITH "D"

In the picture are a number of objects beginning with "D" like dog, darkey, devil, etc. See how many you can find. The person who sends in the largest, nearest correct list of "D" words wins first prize, \$20.00. Of course you would rather compete for the larger cash prizes that we have offered to introduce our new odor, DeDo, as used in our new toilet preparations.

HOW TO WIN \$2500.00

A \$1.00 purchase—see list of offers—makes your answer to the picture eligible for the \$500.00 prize; a \$2.00 purchase makes it eligible for the \$1,000.00 prize, and a \$5.00 purchase makes it eligible for the \$2,500.00 prize. RULES OF CONTEST

1. It costs nothing to enter. Anybody not connected with this company or a relative of any member of our organization may compete.
2. Number words 1, 2, 3, etc. Write only on one side of paper. Place your name and address on each sheet.
3. Use only words found in English dictionary, no obsolete, hyphenated or compound words count. Use singular or plural, not both. Do not use same word more than once, even to designate entirely different objects.
4. List having largest, nearest correct list of visible objects shown in picture beginning with "D" wins first prize, next, second, etc. Nothing else counts.
5. Do not name any object more than once. Any part of object may be named in addition to object as a whole.
6. Only one prize to a family, or to member of group working together.
7. In event of ties duplicate prizes will be paid to each tying contestant.
8. Three well known men, none having any connection with this company, will act as judges and each contestant agrees to accept their decision as final. These are the judges: Mr. G. G. Struthers, Cashier, Union State Bank
Mr. H. N. Leighton, Contractor, Ex-Pres. Board Education
Mr. Geo. F. Womath, Bus. Agt. Mpls. Board Education
9. All answers will receive equal consideration whether accompanied by purchase or not.
10. At the close of the contest a printed list of the correct "D" words and the names of the winners will be sent to all contestants who make purchases.
11. All answers must be mailed before post office closing time February 15th, 1922.

TABLE I.
WINTER AND SPRING EGG RECORDS
AS A BASIS OF ESTIMATING
YEARLY PRODUCTION.

	Percent laid in winter	Percent laid in spring	Number laid for yr.
1. White Leghorn	13.6	37.1	175.6
2. White Wyandotte	26.4	33.2	171.9
3. Barred Rock	25.2	35.8	168.7
4. White Wyandotte	20.6	38.2	164.5
5. White Rock	18.1	36.1	163.6
6. White Leghorn	24.7	37.9	163.5
7. White Leghorn	13.5	36.5	163.0
8. White Leghorn	21.4	38.2	159.7
9. White Leghorn	22.9	37.0	149.8
10. White Leghorn	15.7	45.8	145.0
11. White Leghorn	9.9	46.1	144.8
12. White Leghorn	15.9	38.2	144.4
13. White Leghorn	16.6	34.3	143.1
14. White Leghorn	7.2	36.7	139.0
15. White Leghorn	29.1	38.3	136.1

A glance at Table I will show that the percent of the total eggs produced in the four winter months shows a wide variation with the different flocks. Flock No. 1, which made the highest record in this contest, had a comparatively low winter record, only 13.6 percent of the eggs being laid during those months, while flock No. 15, which ranked well down the list in point of total production, had a high winter record, with 29.1 percent of the eggs being laid between November 1 and March 1.

The table shows no apparent close correlation between the number of eggs laid during the winter months and the total record for the year, although a close study of the records probably would show that the physical conditions surrounding the flocks might explain the wide variation in winter records from flocks that laid a similar number of eggs throughout the year. Thus one flock that had excellent laying ability may have been poorly housed during the winter or may have contained a larger percent of late hatched pullets than was the

case with another flock that made a better showing during the winter months but had no greater inherent laying qualities. These figures are presented as a matter of interest rather than for their scientific value.

The percent of eggs laid during the spring months in relation to the total number for the year, as shown in Table I, indicates less variation than is found in the winter column. With the exception of two or three flocks, the spring production for these fifteen best flocks in the contest represents between 36 and 38 percent of the total record for the year.

Table No. II shows further interesting data with regard to the relation of spring production to the total record.

TABLE II.
MARCH, APRIL AND MAY PRODUCTION AS AN INDEX OF THE YEAR'S RECORD.

	No. of flocks	Av. Egg Prod. For year	For spring	Total laid in spring
Less than 80 eggs	5	66.1	30.9	45%
80-100 eggs....	10	91.8	38.0	41%
100-120 eggs....	25	108.1	44.4	41%
120-140 eggs....	14	129.1	49.7	39%
140-160 eggs....	9	146.8	55.9	38%
Over 160 eggs..	4	164.9	61.3	37%
Lowest flock....	1	44.3	26.7	60%
Highest flock....	1	175.6	65.1	37%

In Table No. II all the flocks which finished the year in the Missouri Farm Flock Laying Contest ending November 1, 1920, are listed and they are divided into groups according to the number of eggs laid throughout the year. Thus the first group contains the flocks that laid an average of less than 80 eggs, and the last group contains all the hens, in flocks average more than 160 eggs per hen.

A comparison of the column showing the average production of spring eggs by each group, with the average production for the year by the same groups,

shows a rather consistent correlation between the two. Thus the hens that laid less than 80 eggs in the year, with an average for the group of 66.1 eggs, had an average spring production of only 30.9 eggs, while the flocks averaging more than 160 eggs had an average production of 164.9 eggs, with a spring record of 61.3 eggs.

Figured on a percentage basis as shown in the last column in Table II, the poorest flocks laid the largest percent of their eggs during the spring months. This is what would normally be expected, because it is a well known fact that even the poorest hens lay fairly well during March, April and May, while the best hens are busy throughout the entire year.

A study of the percent of spring eggs to the total for the year, as shown in Table II, indicates that assigning any arbitrary value to the spring record in relation to the total production is likely to lead to serious error. Thus, in the poorest flock 60 percent of the eggs were laid during the three spring months, while in the best flock only 37 percent were laid during the same period.

However, for a majority of the flocks in this contest approximately 40 percent of their eggs were laid during March, April and May, and a fairly accurate estimate can be made by assuming that the spring production is two-fifths of the total record for the year, although in the extremely poor producing flocks the error from this method of computation would be rather large.

These figures indicate that for farm flocks at least the system which has been advocated by some poultrymen of taking the trapnest record for the best 100 days, which would naturally include March, April and May, and using the

While high egg production is one of the most essential qualifications at White Hill Farms, it has been clearly proven that White Hill Farms Single Comb White Leghorns breed true to the Highest Standard Ideals by the remarkable winnings they have made again this season the Great Heart of America Show and other leading Quality Shows in New York, Pennsylvania, Missouri, Kansas and Texas, as well as other sections of the United States in the hands of our customers. Strictly on their merits have White Hill Farms Leghorns proven their superior exhibition qualities by forging ahead in keen competition until today they are one of the most favorably spoken of flocks in America. As layers of large white eggs we do not know of a flock in existence that will average more eggs per year and after all is said and done, its the general flock average that pays the dividends that we all look for. This is worthy of your consideration in buying your foundation stock for on that general average egg production and standard stock bred in its purity does your success depend. If you want eggs or baby chicks to produce winners for next season's shows or foundation stock for your commercial plant you want

WHITE HILL FARMS **SINGLE COMB**
WHITE LEGHORNS
4500 Females Mated for 1922

Baby Chicks

Hatching Eggs

8,000 of them now ready, every three weeks CHICKS from tried and proven producers, Chicks that have WHITE HILL FARMS GUARANTEE behind them, CHICKS from eggs laid by heavy producing lines, every one of them bred and raised right here at White Hill. Ours is not a commercial hatchery, but a breeding establishment offering you blood lines that will improve any flock in egg yield or for exhibition purposes at a price all can pay. Try White Hill Farms Chicks and be convinced.

Ready now in lots of a setting up to 5,000 or more eggs. Every day here at White Hill our hens produce for our customers aside other than for our own use, eggs by the thousands—think of it, say 2,000 Selected Hatching Eggs daily and you can appreciate why they hatch better by being shipped fresh, assuring you a uniform hatch of Big, Healthy, Vigorous Chicks. Our mating list tells all about our methods, prices, various matings, our guarantee of quality and satisfaction. Its free for the asking.

REMEMBER My flocks are line bred—the same rich blood lines that have produced my noted winners at this season's leading exhibitions are the very blood lines that are making White Hill Leghorns famous as producing fowls. Whether it be Stock you desire, Baby Chicks, or Eggs for Hatching, I can supply you promptly, as my large flocks and many special matings assures you the best of service. Order early and be assured of delivery on date desired.

ADVANCE MATING LIST NOW READY

EGGS from pens headed by CHICAGO COLISEUM, NEW YORK STATE FAIR, and OHIO STATE FAIR Blue Ribbon Winners at \$10 and \$15 per 15. All unfertiles replaced. SPECIAL this month—25 well grown grand colored breeding cockerels at \$10 and \$15 each. Exceptional value.

MAYSLAKE FARMS

F. F. Conway, Mgr.

HINSDALE, ILL.

CURTISS UT CLOVER

Sleet, snow and ice storms make it necessary to confine the layers closely with the resultant falling off of the egg yield. The use of our Cut-Clover in your laying mash not only keeps egg production at top notch but starts slow, backward pullets laying. Read this letter from one of our many satisfied customers:

Dec. 13, 1921

W. R. Curtiss Co., Ransomville, N. Y.
Gentlemen: Kindly ship at once via freight to Bolton, Conn., 600 lbs. more of your Cut-Clover.

I bought 300 lbs. in my last order and have been feeding part of it in my dry mash to my pullets and they are doing fine. I haven't much left, so you can't be too quick to suit me.

Yours truly,

M. E. Fish.

Day-old Chix and Dux

The parent stock of our chix and dux has been Hogan Tested for propency and high egg capacity for the past fifteen years. Their popularity has increased our output of 80,000 chix to 500,000 head annually within the past four years. Send for our SPECIAL DISCOUNT PRICE LIST covering early Spring deliveries.

Prevent and Cure COLDS-ROUP-CANKER

Drives 30 Miles to Get Warner's Roup Tablets Won't Be Without Them

Mr. W. J. S. of Whitney, Ind., writes on November 25th, 1921: "I drove in some days ago to get some of your Roup Remedy. Please send me another supply as the dollar spent with you helped my chickens more than \$30.00 spent on other preparations. My chickens are showing up fine since I began using your remedy. Please send as soon as possible."

Thousands of poultry raisers find Warner's Roup Remedy the best they ever used. It prevents Roup, Canker, Diphtheria and Chicken Pox. It kills the germs that cause these diseases. It soothes and heals the inflamed parts and helps restore them to normal condition.

The Government Poultry Experts recommend the main ingredient in Warner's Roup Remedy. You are guaranteed a cure. Money back if it doesn't. PRICE: 50c and \$1.00 postpaid.

Warner's Poultry

Vigor Guaranteed to make hens and pullets lay more eggs. A pure vegetable and mineral tonic. It stimulates the appetite, aids digestion, enriches the blood, strengthens the heart and nerves. No forcing, just increases all functions in a natural way.

Mrs. O. F. G., Montana, writes "I believe your Poultry Vigor is good. My chickens are looking much better as to color of comb. Their vitality is greatly improved and they are beginning to lay much better. Please send me another dollar package at once." Price 50c and \$1.00 postpaid.

MONEY BACK GUARANTEE

SEND YOUR ORDER TODAY. We guarantee satisfaction or refund your money. FREE: \$1.00 package—your own selection—with \$2.00 order. GET BIG POULTRY CIRCULAR FREE. You'll need these remedies. They'll make you money. IT WILL PAY YOU TO ANSWER THIS AD TODAY.

number of eggs laid during this period as the index of what percent of the maximum a hen should lay during the year, would give results radically different from those actually secured.

According to the "index" theory, the best hens under the best conditions would lay 300 eggs in a year, and the number of eggs laid during the best 100 days of the laying period would represent the percent of 300 which she would be expected to lay if she was properly housed and fed. According to this theory, a hen which laid 30.9 eggs in the ninety-two days during March, April and May—as those did in the flocks having an average of less than 80 for the year—would be producing 33.5 percent of the maximum and ought to lay 100 eggs during the year. In the farm flock report their average was 66.1 eggs.

According to the "index" plan, the hens that laid 61.3 eggs during the spring months—as those did in the group which averaged over 160 eggs—would be 66.6 percent producers, or should lay during the year 200 eggs. The average for this group was actually 164.9 eggs.

It might be argued by the friends of the "index" method of judging egg production that the hens which made a 33 percent production during the spring months would have made 100 eggs had they been given the proper care during the rest of the year, and that those laying 66 percent during the same period would have been 200-egg hens had conditions been right. This, of course, is an argument that cannot be answered, because no man can say just what the ideal conditions are, and if a hen or a flock fails to come up to her predicted performance it is always possible to claim that the feed, the weather, or something else was not just right.

While the records from the farm flocks cited above indicate that the spring production is some indication of the total record for the year, most poultry keepers are likely to insist that some more definite record be available. What flock owners in general are looking for is a strain of layers which will produce consistently throughout the year and make a high average production, and most of them will insist that the 100-yard dash is no accurate indication of the runner's ability to make fast time in the mile race, nor is a two or three months' record any special indication of the total number of eggs which a hen will lay during the year under the conditions as she will have to meet them.

Actual records showing what an individual hen, or an entire flock has done rather than estimates of what they should have done, are the records that sell stock at the present time.

DROPPING BOARDS.

Read something about dropping boards in the December issue. Here is the way I build mine. I make a frame the size of the dropping board wanted, out of 2x3/4 in. material. Over this I stretch some heavy asphalt roofing. This has it all over boards. No place for lice to hide, there being no cracks, also isn't so heavy to handle. Mine slides under the roost on three cleats, one in the center, and one each side. Works fine; just try it. Wisconsin. K. D. Crowley.

It is pretty hard to tell whether a man will be successful in poultry or not until he has actually gone ahead and attempted the job.

A great many poultrymen who are today successful had very little experience when they went into the business.

Shoemaker's Poultry Book and Almanac for 1922

Send for it
NOW!

The book has about 200 pages, with many colored plates of fowls true to life. Tells all about chickens, their cost, their care, and diseases and remedies.

The Globe

It also tells all about incubators, their prices and operation. All about poultry houses and how to build them. It's an encyclopedia of chickdom. You need it. Only 20 cents. Your money back if not satisfied.

SHOOTS RIGHT UP!*

no priming~no pre heating~no delay~no fuss

The Wishbone Valveless ~ Blue Flame BROODER

has no valves to stick, no strainer to clog and no thermostat to go wrong. Imagine an oil-burning brooder with all possibilities of worry and trouble eliminated! Imagine a hot blue flame generated without priming or fussing—just be touching a match to the burner! That's the Wishbone Valveless Blue Flame Brooder. Simply fill the large 1 gallon reservoir, put a match to the burner and a powerful blue flame is immediately generated. Then you can forget it for weeks at a time (except for occasionally refilling the reservoir)—and be sure your chicks are 100 per cent safe, happy and healthy.

Send for Booklet

We know it's hard to believe. So we have prepared a descriptive booklet which will convince you of the marvelous perfection of the Wishbone Valveless Brooder. This booklet interestingly explains the amazing, exclusive features of the Wishbone Valveless. Get out your pen this minute and send for the booklet.

Dealers! Hatcheries!

This is something worth looking into. The thousands of inquiries about the Wishbone Valveless we receive each month would astound you. The Wishbone Brooder sells itself—and there's substantial profit in it for you. Get in on our special Dealer's Proposition. Send for details and sales helps at once. Place your order quickly so that you get your share of this big business.

HATCH EVERY GOOD EGG *with* SOFT HEAT

**Stronger Chicks
Less Expense
Less Trouble
More Money**

Tubeless. Full radiator plate does away with cumbersome, unsatisfactory tubes and pipes.

Smokeless, gasless, odorless. Nothing but pure, moist air reaches egg chamber.

Center Heat. No side lamp. Saves space and weight. Insures equal heating. Radiation from above, as hen supplies it.

Round Egg Chamber
—Just like hen's nest. Makes turning of eggs quick and easy.

Automatic Control
of moisture, heat and ventilation. Requires no attention. Steady, even supply assured, regardless of altitude or weather.

MRS. C. A. ASH, Litchfield, Mich., got 109 chicks from 109 good eggs the first time she ever used a **Porter SOFT-HEAT Incubator**. Roy Klavine, Geneseo, Ill., an inexperienced operator, got 100 perfect chicks from 100 fertile eggs. Mrs. C. A. Saunders, Center, Neb., got 176 strong chicks from 179 eggs, made over \$120 in 4 months, and had 150 chicks left which should make her \$150 more, or a profit of about \$60 a month. Hundreds of Soft-Heat users report 90% to 100% hatches, fewer losses and bigger profits.

Moist Warmth—A Life Saver. Moisture is necessary to life. Both eggs and chicks need it. The Porter supplies it automatically. Simple and certain. You can get big hatches and make easy money with

The Porter SOFT-HEAT Incubator

Duplicates Nature's process exactly. Turns every good egg into a strong, perfect chick. Principle endorsed by U. S. Government. Pronounced the greatest of incubator improvements.

No Suffocation—No Cripples. Eggs don't dry out in Soft-Heat. Moist warmth keeps shells brittle and membranes tender. Chicks break through easily and breathe pure, fresh air instead of poison-laden gases, from the very first. *The Porter hatches no cripples.*

Soft Heat Saves 300% in money, time and labor. 3 to 4 quarts of oil—one filling of tank—completes a hatch. Others burn 4 to 5 gallons and require daily filling of lamp.

Only 2 Minutes' Care Daily. Eggs are turned semi-automatically without removing or lifting tray, reducing necessary care to 2 or 3 minutes a day. A child can operate the Porter.

Make More Money This Year! Take your hatching away from unreliable hens and dead air incubators. Get MORE and BETTER chicks, decrease your losses and increase your profits with the improved Soft-Heat. Use the most scientific incubator ever made. **WE PAY EXPRESS.**

Book Free! Fully illustrated. Explains Soft-Heat in detail. Gives interesting stories of success from many states. Tells how you can succeed and make money from the start with this BETTER hatcher. Send name today—a card will do—for your free copy.

Porter Incubator Co., 50 Porter Bldg., Blair, Nebr.

Barred Plymouth Rock EGGS—EGGS—EGGS—EGGS—EGGS EGGS FOR HATCHING

George Beuoy, the man who has done so much to make Capons famous, raises Barred Plymouth Rocks with a national reputation. For more than twenty consecutive years he has bred the one kind only. He specializes on the bred-to-lay kind; exhibits them in the large shows to prove that good ones can be bred from laying stock. Mr. Beuoy has shown his birds at New York, Chicago, Philadelphia, St. Louis, Kansas City, Topeka, Wichita, and more than two hundred other towns, besides winning more first prizes at the World's Fair, Panama Pacific Exposition, than any one other exhibitor. Mr. Beuoy has in all several hundred first prizes won on his bred-to-lay birds against strictly exhibition stock in hot competition. Write to him for a free copy of his new illustrated mating list showing a Barred Plymouth Rock cockerel in NATURAL COLORS on the front page. Low prices on setting eggs. Three matings: Cockerel, Pullet and Standard. A few extra good Cockerels for sale.

24 Hens Average 183 Eggs in 12 Months

Bought Old Hens Sent to Market Gave Over 4300 Eggs in Year

"I am not an experienced poultry-man, but will tell you my experience in using Giles Poultry-Tone. I bought a crate of 24 Leghorn hens from a South Water Street commission man. I commenced giving them Poultry Tone, according to directions, twice a day for 10 days. In the meantime they had commenced to lay. I continued to give them this mixture three or four times a week. For twelve consecutive months, 1 year, I kept an accurate account of the eggs received from these hens. They gave me 4,392 eggs. Experienced poultry men told me this was an exceptional yield of eggs, especially as the hens were old."

(Signed) J. J. Bonner, Chicago, Ill.

"Giles" POULTRY TONE

Send your order today for this wonderful efficient tonic-conditioner if you want a lot of high priced winter eggs. POULTRY TONE puts your fowls in highest state of health and vigor, and keeps them there.

Giles POULTRY TONE will greatly increase egg production because it increases the appetite, aids digestion, makes the bowels more active. It tones up the egg-making organs, develops the egg cells in the ovary so that you get more eggs, no matter how cold or wet the weather. Mr. Bonner's experience is proof of that.

PREVENTS AND CURES COLDS-ROUP-CHOLERA
POULTRY TONE overcomes and expels all germ poisons. It combats the germs that cause Roup and Cholera and it tones up the system so the chickens can resist disease. It affords prompt and permanent relief.

MONEY-BACK GUARANTEE

POULTRY-TONE is a real Poultry remedy and tonic. Always sold on money-back guarantee if not satisfied. On the market 20 years without a single request for refund. Try Poultry Tone on this plan. You can't afford to be without it. It's a sure money-maker for you.
Price, 50 cents large bottle; quart can, equals ten 50 cents bottles, \$5.50, prepaid. Send for big circular Poultry Welfare, it's free. Send your order today.

Kansas City Show Awards

Awards at Kansas City, Heart of America Show, Nov. 29 to Dec. 4, 1921:

There was a total of about 1,350 birds entered in the single class, 900 birds in pens, 50 in display cages, 100 turkeys, 100 bantams 700 pigeons, 225 cats, and about 100 rabbits and cavies.

Nearly 15,000 people visited the show. All the leading varieties were represented by birds of the highest quality. In many respects it was the greatest show ever held in Kansas City. In behalf of the Association we thank all exhibitors and others for the interest taken in making the show a great success, and are in hopes that all can be with us another year.

Make Sure Now You'll Make Most Money This Season

There's Still Time to Order a Wishbone

The hatching season is almost here. But there is still time to get a Wishbone. There is still time to make sure of a money-making season by getting the money-making mammoth. The Wishbone produces chicks at the lowest cost per chick. The Wishbone saves fuel and labor. It saves time and trouble and worry. The Wishbone made more money last season for operators by producing better chicks at least expense.

Save Labor—Save Space—Increase Capacity Without Building:

Double-deck or triple-deck your present machine or add sections to the end. As for Wishbone capacity in small space, read the challenge in the corner of this ad. You can't equal Wishbone capacity with any other incubator. Three deck construction, an exclusive Wishbone patent makes largest capacity—largest profits available to hatchers with limited space.

Wishbones are sturdily constructed to last a lifetime. Wishbones are scientifically, mechanically perfect. We can't possibly tell you all about its advantages here, so

Write for the Facts

Take your pen. NOW! Write for our new incubator catalog. Tell us the present capacity of your incubators and the amount of available space. Let us show you how to increase your capacity—and increase your profit per chick. NOW! The season starts soon and for big profits, you should start it equipped with the Wishbone Mammoth Incubator.

Science Discovers Greatest Lice Killer

Changes Old Methods. No Dusting or Spraying. Birds Delouse Themselves. Gives Lasting Relief.

A recent discovery promises to revolutionize and replace all the methods accepted up to now for keeping poultry free from lice and mites. No more dusting or spraying, no fuss or bother taking up time and energy. This wonderful lice killer keeps the birds always lice free without the poultry raiser doing any work. It is the simplest, easiest, surest and best method ever discovered.

Credit for this marvelous discovery goes to Chas. M. Hick, a Chicago chemist who worked for years to perfect this unequalled new method. Mr. Hick is already favorably known to the poultry world as the inventor of the famous Hick's Egg-Lay Tablets that make hens lay in winter. Every poultry raiser knows the trouble lice and mites cause.

Hick's Licekill, which is the name of this sensational lice killer is a liquid that is added to the drinking water (or the feed can be soaked in a solution of it). The medicine taken into the system of the bird comes out thru the pores and every louse or mite dies or leaves the body. Hick's Licekill is palatable, does not injure the flavor of the eggs or meat and has absolutely no harmful effects on the bird's system. A few days treatment at the start gets rid of every louse and then a little in the drinking water one or two days a month and the flock is kept permanently lice free.

Increased egg yield, greater gains, healthier flocks always follow the use of Hick's Licekill. So confident is Mr. Hick that this wonderful liquid will rid your flock of every louse or mite that he is offering every reader of this paper the opportunity of trying it out without any risk. Send no money, just your name and address to Chas. M. Hick & Co., 177 N. State St., Dept. L-1, Chicago, Ill., and a full sized dollar bottle of this supreme lice remover will be sent you. Furthermore, as an exceptional offer, Mr. Hick will send you with your order, at no additional cost, a regular \$1.00 box of Hick's Egg-Lay Tablets. On delivery deposit with the postman \$1.00 and postage. If after a two weeks trial you are not absolutely satisfied, write Mr. Hick and your money will be immediately refunded.—Advertisement.

26 Eggs a day from 30 Hens, in Winter

Mr. Miller Has Been Getting Results Like This for Years. Tells How.

"During the worst part of last winter, with cold blustery days and damp ground, we got 20 to 26 eggs a day out of 30 hens. Have used Don Sung for several years, and always with wonderful results. And the eggs are better, larger and heavier."—E. E. Miller, 509 Lamar St., Ft. Worth Texas.

With the right kind of help, your hens will lay all winter. It's no trouble, and costs nothing to try.

Give your hens Don Sung and watch results for one month. If you don't find that it pays for itself and pays you a good profit besides, simply tell us and your money will be cheerfully refunded.

Don Sung (Chinese for egg-laying) is a scientific tonic and conditioner. It is easily given in the feed, improves the hen's health and makes her stronger and more active. It tones up the egg-laying organs, and gets the eggs, no matter how cold or wet the weather.

Don Sung can be obtained promptly from your druggist or poultry remedy dealer, or send 50c for a package by mail prepaid. Burrell-Dugger Co., 214 Columbia Bldg., Indianapolis, Ind.

ELECTRICITY FOR POULTRYMEN.

Homestead Campine Farm has brooded its Silver Campines in electric hovers for a number of years. The heat is not only constant, and free from fumes, but it is radiated downward onto the backs of the chicks, after the fashion of the chicks' backs coming in contact with the warm body of the mother hen; in other words, the heat is not merely hot air diffused into a hover compartment. The losses in this flock of Campine chicks, year after year, are so small (3 to 7 chicks a year out of 200) that the loss may be termed negligible.

Electric incubators are also coming into wider practical use. They used to be exhibited at a few poultry shows, such as New York and Boston, for demonstration purposes, to show chicks hatching; but the electric element is now established the work-a-day business of hatching. The cleanliness, safety from fire, freedom from fumes are strong factors in favor of electricity. The element of uncertainty of current is largely theoretical. John L. Selden, principal of a high school, Bristol, Vt., has reported that the electricity was off 5½ hours during the first week on one hatch yet gave a most satisfactory hatch. It should not be overlooked that the old hen, under natural conditions is known to leave the nest for both short and long intervals, with no perceptible effect on her eggs.

Electricity on the poultry farm is a coming thing. Westinghouse Electric and Manufacturing Co. of Pennsylvania announce an "Aeroelectric," which is an electric generating

unit driven by wind. This machine has been developed by the Perkins Corporation of Indiana, using a Westinghouse generator that is said to give an almost constant voltage of 750 R. P. M. to 2,500 revolutions per minute. In other words, whatever be the speed of the wind, the generator will work efficiently and give the same rate of voltage.

The "Aeroelectric" as it is known is a 1 Kw. plant and the battery has an intermittent capacity of 280 ampere hours or an eight hour rate of 240 ampere hours.

This plant has capacity enough to light the house, barn and other buildings, pump water, operate the vacuum sweeper, electric iron, electric cream separator, electric washing machine and other electrical time-saving household helps.

All this being true it surely will be a boon to the poultry farmer who is beginning to understand the possibilities of electricity, but has never known the luxury of electricity at the absolute minimum of cost.

One great point in hatching and brooding by electricity is the fact that the air does not become vitiated from burning oil or gas. Cleanliness is also a great factor. Electricity, however, is even more extensively used in prolonging the winter day in the laying houses. Its advantages in increasing the egg flow in the high price months of November to March are so well known, that no commercial egg farm is today considered on a high efficiency basis unless artificial illumination is employed.

Herewith is an illustration showing how a common alarm clock is utilized to turn on the current in the poultry house at 4 a. m.

E. N. Lemon, who owns and operates the Sunlight Poultry Farm, near Lynchburg, Ohio, has tried electric lights in his laying pens and found them entirely satisfactory, as well as profitable and convenient for other purposes.

His time clock, for turning the lights on is an inexpensive affair made from an ordinary alarm clock. A flange about two inches long was riveted onto the alarm clock winding key on the back of the clock. This clock is held firmly in place on a shelf in the kitchen by a wire hoop, and a simple electric throw switch is screwed onto the shelf just at the point where the flange on the winding key will strike the lever of the switch and throw it on, as soon as the alarm goes off. The bell or gong of the alarm clock was removed so that the family would not be awakened at 3 a. m. when the switch was thrown.

A MONEY MAKER FOR POULTRYMEN

The "EVERGREEN" Oat Sprouter

—the sprouter that's different

Cuts Your Feed Costs

At Last!

The Perfect Oat Sprouter

After many years experimenting to produce an oat sprouter that would produce the greatest amount of tender green oat sprouts in the shortest time with less trouble and without any waste or spoilage, we have at last succeeded. This new improved EVERGREEN OAT SPROUTER is in a class by itself. Whether you are a "back-lotter" with only a few birds or if you are raising poultry on a large scale you need an EVERGREEN OAT SPROUTER—it spells SUCCESS to every poultry raiser—it cuts down feed costs—it

Converts One Bu. Oats into more than Three Bu. Green Feed

The secret of the success of the EVERGREEN is in its two heat chambers—its interior are ranged—its heating system and its convenience. We discovered that different degrees of heat were necessary during varying stages of germination and growth of oat sprouts to get best results—the EVERGREEN supplies the different temperatures during the various stages—that's why it produces more green feed with less grain and without spoilage.

Our "Seven Tray" machine supplies you with a never ending supply of an abundance of tender green sprouts, enough for your flock of hens every day. Each day put in a tray of raw oats, at nothing like it ever before offered.

Write for FREE Folder "Solving the Question of Winter Egg Production." Write today for descriptive catalog folder and price list, telling all about this wonderful machine—how it will enable you to double and treble your poultry profits. Don't buy an oat sprouter of any description until you find out about the better, more convenient "EVERGREEN."

SILVER CAMPINES

GREEN SHEEN STRAIN

Again Champions at the Great Chicago Coliseum Show

Dec. 6 to 11, 1921, where I won

Cocks	Hens	Ckls.	Plts.	Old Pen.	Young Pen.
1	1	1	1	1	1
3	2	2	2		
		3	3		

My birds were the admiration of many judges and breeders, and were recognized as superior to all former exhibits. This is the tenth consecutive time that my birds have been the champions of the great Chicago show.

Breeding pens now mated. Mating list ready for mailing this month.

My birds are single mated and exhibition birds are mated together. No trick back of these birds.

Campines are fast growers, plump at all ages, heavy layers of large, white shelled eggs and eat less food than Leghorns.

I have the largest plant devoted to the raising of exhibition and high egg record Silver Campines in the United States. My birds have been linebred on my farm over a series of years, housed in open front houses, and are fully acclimated, hardy and vigorous. I have had 69 males placed under ribbons at the Coliseum Show in last ten years. During the same period, I have had 160 females placed under ribbons. This record is without equal in the history of the great Chicago show. It is a part of Campine history.

Write me for information. Your absolute satisfaction is guaranteed.

FRANK E. HERING Desk B SOUTH BEND, IND.

This arrangement, while lacking some of the features of the commercial switch, Lemon pronounced very satisfactory. It is necessary, of course, to turn the switch off each morning when daylight comes, but as they are early risers at the Sunlight Poultry Farm, that is no particular hardship.

It is in the operation of this switch that the storage battery is important. It furnishes current so that all the poultry house lights come to the instant the switch is thrown, and it provides current for lights without the necessity for running the electric plant away along at three o'clock in the morning. It furnishes current for the yard lights, too, if any noise or other emergency makes it desirable to light up the premises in the night, as well as for light in the house.

Asked for figures on the actual increase in eggs realized from using electric lights, Mr. Lemon said: "I haven't kept any figures on all the pens at any time, nor a single pen for an entire season. All we know is that, compared with other seasons without lights, we get a great many more eggs. But I did keep figures on one pen for a short time. From this pen of pullets we were getting around ninety eggs a week, without lights. We put this pen under lights and within three weeks we were getting five hundred eggs a week from it. This is sufficient, to my mind, to establish beyond question, the fact that it pays to use electric lights for the purpose of increasing egg production.

"Even if that didn't pay," he added, "the added safety and the convenience which electricity gives us, as well as the saving of labor, would make our electric equipment a splendid investment. We are entirely satisfied with it and we cannot see how any poultryman can afford to try to get along without electricity, when its benefits are so evident."

LEGITIMATE CONDITIONING.

By Judge E. H. Hoffman

As the show season is approaching the question of conditioning the birds for the winter exhibitions arises and those who expect to have the stock in proper shape must begin early to groom the birds so they will be at their best. Much has been said as to what constitutes legitimate conditioning and what is considered illegitimate that white birds, no matter what breed, must be washed in order to

have them clean and trim. The mere process of washing with water and plenty of soap is considered perfectly proper, but it has become manifest that many breeders do not stop at that but use artificial means of bleaching white plumage and an effort is being made among some of the large breeders to put a stop to this practice and show their birds only in their natural condition.

If such a gentlemen's agreement could be arrived at it would be a great step forward and it seems that if the breeders who do not believe in the "faking" methods, the show managements and the judges would unite upon enforcing strict rules in this respect, the crooked breeders would soon be put out of business. The rules as laid down in the Standard are plain and they strictly prohibit faking of any kind. Not only have some breeders bleached white birds but they have submitted to the practice of fluffing saddles in Leghorn males, bending tail feathers, coloring shanks and many other things that have been done tending to deceive the judges.

It goes without saying, that they have been successful in some of their attempts and no doubt will continue to do so if they believe they can get by with it, but there should be strenuous steps taken to stop these practices. It is not a fair deal to the amateur to be defeated in the show-room by inferior birds that have been faked by a professional and perhaps remain in that condition only long enough to be exhibited or sold to some unsuspecting purchaser. It is a dangerous practice and one that in time will be a detriment to the poultry industry.

Legitimate conditioning of birds is not only honest but it is absolutely necessary when exhibiting in keen competition. Conditioning means putting birds in their best possible shape without violating any of the rules of honesty. Many of the younger fanciers do not understand that they must have their show birds in the pink of condition and they sometimes wonder why they fail to win. For the benefit of the beginner it might be well to give a few points in this direction. I once heard an old exhibitor say that when people go to a party they put on their best clothes and make themselves look just as clean and attractive as possible and he continued that the same is true with birds that are sent to a poultry show. The best birds from the yards of the several exhibitors are brought together and not only are they the cream of the flock but they are "fixed up" for a party and appear in their best condition. In order to have them attractive, however, requires some attention on the part of the owner.

Very often we meet new exhibitors in the show room, who own good birds that are not conditioned, and when cooped along side of others that are in good condition, attract little, if any, attention. Sometimes they are the best birds but being dirty and having broken and soiled plumage they go unnoticed. It does not necessarily require an expert to condition birds, but a little care now and then will go a long ways. The exhibitor must not labor under the impression, however, that a bird can be put in show condition in a week or so, but it takes weeks and sometimes months before a specimen is just what it should be for exhibition purposes.

First prize White Wyandotte pen cockerel at National Show, Chicago, January, 1921. Owned by Chas. V. Keeler & Son, R. F. D. 11, Winamac, Ind.

Bred And Owned By
PURITAS SPRINGS POULTRY FARM
AVON LAKE OHIO

On large poultry plants and in the yards of many of the smaller breeders who raise their stock on town lots, we find conditioning houses which are so arranged that male birds can be cooped separately, taught to become accustomed to being handled and as a result they overcome the idea that they will be harmed every time someone comes near them. These conditioning houses are equipped with heat and plenty of light so the birds are kept comfortable. Where white birds are raised, this building is used for washing purposes and after they are washed and go through the legitimate process of cleaning, they are placed in these coops which are arranged along the wall, after having been placed close to the stove or other heating apparatus as the case may be, long enough to become partially dried.

All birds that are intended for showing should be removed from the balance of the flock several weeks before the show and placed in the conditioning houses. It stands to reason that birds cannot be taken out of the yard the day before the show and in their wild condition make any kind of appearance in the show room. Still that is the way a large number of the amateurs do and it need not be said that they never get anywhere near the awards. In many cases the beginner becomes disgusted and quits because he believes he has no chance of winning against his competitors, but this, to a large extent is due to the fact that he was ignorant and no one ever told him.

Over Conditioning is Bad.

On the other hand there are some exhibitors who go to the other extreme and attempt to make a good bird out of a poor one. In some cases this has been done by so-called "faking" but few ever made much headway by following that practice. The best way is to try to breed birds free from disqualifications and that can only be done by close culling and not using any males or females that show serious defects because the offspring will invariably show the same faults.

By the time the show season opens all disqualified specimens should have been disposed of so only the best ones remain from which to select the show birds. There are too many amateur breeders, however, who hate to kill a pullet that shows a serious defect if she is exceptionally good in type and color or in some other section which he has been striving to improve and they often "take a chance," so to speak, and endeavor to improve certain sections at the expense of the disqualification. Such breeders never build up a flock that can be depended upon.

During the coming show season let there be an effort made to exhibit fewer disqualified birds and also to show them in their best possible condition. The pulling of off-colored feathers in some of the barred, penciled and laced varieties is not considered illegitimate and it is surprising what an improvement it will make in a bird that has been carefully gone over for poorly marked feathers. Barred Plymouth Rocks, no matter how good they may be, will invariably show some black and partly black

Everlay Leghorns

The steady, continuous winnings of the famous Everlay Leghorns is unparalleled in Brown Leghorn history. Everlay Leghorns have that **Wealth of Egg-Laying Goodness**

combined with superb show excellence making them the joy and pride of everyone so fortunate as to own a flock of these beautiful business hens. They are so hardy, vigorous, shell out so many eggs on less feed. They are indeed "Wonder Winter Workers." They hold a World's Record made at the American Egg Contest.

MORE FIRST PRIZES

For 3 years they won best display at Madison Square Garden, N. Y. At Chicago past 2 years more first prizes than all competitors combined. Get Everlay Brown Leghorns in all their purity direct from me at Everlay Farm. Choicest fowls, trios, pens, show birds for any show priced reasonable. Breeding cockerels to put the "lay" in your flock, special prices. Eggs and chicks from Special matings and egg-bred flocks. Catalog free.

Raise More and Better Chicks

It's Easy with the CYCLE HATCHER

This practical metal machine closely duplicates conditions of actual hen's nest. Nest is scientifically heated from above and around the eggs. Perfectly ventilated. An accurate, automatic regulator controls heat.

The Cycle Hatcher is less expensive to operate, and requires less care than the setting hen. Costs less than any machine of equal quality on the market.

Will not swell, crack or warp like a wood incubator.

Round glass window in top of hatcher enables operator to read thermometer without opening the machine.

The Cycle Hatcher, being light in weight, can be moved to almost any location. Requires but little space. Hatches any number of eggs up to 50 on two or three quarts of oil. Two or more Cycle Hatchers with capacity of fifty eggs each produce more and better chicks than one large machine.

This book also lists and describes many accessories for poultry raising, including Brooder Hatchers, original Philo System Coops, Galvanized Iron Fireless Brooders, feed and water dishes, and scores of other items. Write for it today.

Price complete \$9.00

Let us send you a free booklet containing many suggestions about new methods of poultry keeping that will interest you by showing you how you can bring more chicks to maturity with less work, less time, greater profits.

feathers. These can be easily plucked out, giving the plumage a more even appearance. The same can be said of smutty feathers in the backs of laced Wyandottes and in Partridge and Silver penciled varieties. Care must be taken, however, not to remove too many in one section or main tail feathers, or primaries or secondaries. A certain amount of good judgment must be used in this respect, but with a little experience one can soon become an expert in fitting a bird for the show.

Feeding the Hens

By Alfred R. Lee.

Feeding hens is one of the most important factors in producing eggs. Properly balanced palatable feeds are necessary to get good egg production. Corn, wheat, and oats are the principal grains fed to poultry and make what is called the scratch mixture. In addition to the scratch mixture the hens should be fed a mixture of ground grains, mill products, and meat scrap or milk, which constitute a mash. Corn meal, wheat bran, wheat middlings, ground oats, and meat scrap form the basis of a good mash, to which other products may be added if available at a low price. Use at least two grains in the scratch mixture, selecting those grown at home or produced locally, and supplement these with corn meal, mill feeds, and meat scrap or waste milk. The club member who keeps only a few hens and does not live on a farm or produce any grains will often find it advantageous to buy the prepared scratch mixtures and mashes.

Egg-Laying Rations.

The following rations have been used with good results on the Government experiment farm at Beltsville, Md.:
Ration No. 1

- Mash.
2 pounds corn meal or barley meal.
1 pound bran.
1 pound middlings.
1 pound meat or fish scrap.
Scratch Mixture.
2 pounds cracked corn.
1 pound oats.
1 pound wheat or barley.
Ration No. 2

- Mash.
3 pounds corn meal.
1 pound meat scrap.
Scratch Mixture.
2 pounds cracked corn.
1 pound oats.
Ration No. 3

- Mash.
3 pounds corn meal.
1 pound bran.
1 pound middlings.
½ pound meat scrap.
Scratch Mixture.
2 pounds cracked corn.
1 pound wheat.
1 pound oats.
Feed with table scraps or cooked vegetables.

Ration No. 2 is of especial value to those who have a considerable quantity of waste products from the kitchen, tables, or garden. If skim milk or buttermilk is available this mash can be mixed with milk and the meat scrap omitted.

The scratch mixture should be fed twice daily, preferably in litter from 3 to 5 inches deep on the floor of the

Hens Keep Busy They Must Lay Eggs If Given a Chance

Every poultryman can now greatly increase his profits through the remarkable discovery by a noted poultry authority, who has perfected a product which seems to start them laying as if by magic—even in cold and wet weather.

This wonderful egg producing tonic is known as "HEN-PEP" and it gets the eggs, because it supplies in a highly concentrated form the "Pep" that is so necessary to hens at this season.

How did she do it?

Hen-Pep did it.

HEN-PEP is put up in convenient tablet form and is simply mixed with the feed.

So confident are the manufacturers of HEN-PEP that it will start your hens laying and keep them laying, that they offer to send a large double size box, for \$1.00. Follow the directions, and if at the end of one month's time you find it does not tone up your hens and greatly increase their egg production, tell us, and your money will be promptly refunded.

SEND NO MONEY—Just write and the large box will be mailed at once. When it arrives pay the postman only one dollar and postage, on the guarantee that if it is not absolutely satisfactory your money will be returned without question.

Write today—a postcard will do—and start your hens laying at once.

HEN-PEP CO.

Desk F, 568 Broad Street, Newark, N. J.

K-PHALANX LIGHT BRAHMAS

in a class of 133 birds, at Guelph, Canada's greatest poultry show, December, 1921, won Cocks 1-2-4-5; Hens 1-2-3-4-5-6-7; Cockerels 1-3-4-5; Pullets 1-2-3-5; Pens 1-3-4; vindicating their three years' sovereignty in Canada. Exhibition birds \$10 each and up. Cockerels fit for any show \$25 each. Twenty blue-blooded breeding cockerels \$5 each. Five young breeding tries, properly mated, \$15 each. Eggs \$10 a setting. K-Phalanx birds are winning far and wide at major shows in Canada and the United States. An unfailing guarantee of satisfaction. Member A. P. A. and both Brahma Clubs. M. C. WALLACE, Iroquois, Ontario, Canada

CYCLE HATCHER CO., 105 Philo Bldg., Elmira, N. Y.

hen house. Feed about one-third of the mixture in the morning and two-thirds in the afternoon. In the morning give only what the fowls will eat up within half an hour, and at night enough to satisfy them fully.

Feed a mash either as a dry or moist feed in addition to the scratch grains. The dry mash is the more common method. It should be kept in a hopper before the fowls constantly. A moist (not sloppy) mash gives very good results when used by a careful feeder. It should be fed only once a day, preferably in the morning or at noon, and only as much should be fed as the fowls will clean up in from 15 to 30 minutes. A moist mash is very useful to use up table scraps and cooked vegetables, and is greatly improved if mixed with milk.

The boys and girls must use their own judgment in deciding how much grain to give the hens, as the quantity of feed they will eat varies with different pens and at different seasons of the year. A fair general estimate is to feed about 1 quart of scratch grains and an equal weight of mash (about $1\frac{1}{2}$ quarts) daily to 13 hens of the general-purpose breeds; such as the Plymouth Rocks, Rhode Island Reds, or Wyandottes, or to 16 hens of the smaller or egg breeds. This would be about $7\frac{1}{2}$ pounds each of scratch grains and of mash daily to 100 Leghorns and about $9\frac{1}{2}$ pounds of each to 100 general-purpose fowls. If hens have free range or large yards containing green feed a general-purpose hen will eat about 75 pounds of feed in a year and a Leghorn will eat about 55 pounds, in addition to the green stuff consumed.

Green Feeds, Grit, and Oyster Shells.

Green feeds should be supplied to hens confined in small yards and also to all hens during the winter, when no green feed is available in the yards. Free range or large yards kept in grass will furnish ideal conditions for green feed. Where smaller yards have to be used they should be divided into 2 parts and used alternately, planting the vacant section two or three times yearly with a quick-growing green crop, such as rape, oats, wheat, rye, or barley. This method furnishes green feed and also helps to keep the yards sweet and clean, which is a very important consideration.

Good kinds of green feeds are sprouted oats, alfalfa meal, chopped alfalfa and clover hay, cabbages, and mangel beets. Cabbages may be hung up in the poultry house; the beets are usually split and stuck on a nail on the side wall of the pen about a foot above the floor. Clover and alfalfa may be fed as hay cut into $\frac{1}{4}$ or $\frac{1}{2}$ inch lengths, or they may be bought in the form of meal.

Oats for sprouting are soaked over night in warm water and then spread out from $\frac{1}{2}$ to 1 inch thick on trays having perforated bottoms and put into an oat sprouter. Water the oats thoroughly and turn the trays around once daily to promote even sprouting. Artificial heat should be supplied in cool weather by the use of a kerosene lamp or by some other means. Use a good grade of oats, allow a square inch of sprouted-oat surface per hen daily, and feed these sprouted oats on the floor of the poultry house or in the yard. Feed at any time after the sprouts are well started, which usually takes from 5 to 7 days. Keep the sprouter clean and spray it occasionally with disinfectant to prevent the growth of mold.

BOYER'S HATCHERY

Thorntown, Indiana, E. Main Street

Well developed White Wyandotte and White Plymouth Rock Cockerels and Pullets, \$3.00 to \$5.00 each. April and May hatches, Martin and Fishel strains.

BABY CHICKS FOR 1922

Incubator capacity—Newton—60,000 eggs. Prices early, prepaid, 12 cents to 20 cents each. Later 8 cents to 15 cents.

Kinds of Farm Poultry Keepers.

I am a painter and paper hanger in a small Missouri town and do a great deal of work among farmers. Being a "chicken crank," about the first thing I notice about a farm is the poultry and how cared for.

I find there are two classes of farmers. One class has a well-kept farm, good stock, good buildings and fences and generally a flock of purebred poultry. The other class has a run-down place, poor buildings and a few mongrel chickens. The painter would starve if he depended on this class for a living. I will try and describe conditions as I see them.

I believe over half of the farmers are using the same methods about their farms that their grandparents did. This is a sample. The hen house is an old shed with no system of light or ventilation situated in a muddy lot. The roof leaks and the cracks between the boards admit the winds and snow. The chickens roost on some poles put up ladder fashion. The floor is damp and covered with foul smelling droppings. The nests consists of a few boxes put around on the ground. The inside is infested with lice and mites and hence the chickens prefer roosting in the barn or trees. If you happen around about roosting time you will see them fed a feed of ear corn scattered on the ground. The chickens are a mixture of every breed and cross breed. I have had people tell me that they were healthier than purebred stock, some even claim they lay better. In the late spring and summer they get a few eggs, but when cold weather comes on and the chickens cannot get green feed and bugs on the range they stop laying until spring. I have known farmers to loose hens by the dozen from roup and cholera and young chickens by the hundred with white diarrhea because they failed to keep their buildings clean and separate the sick chickens from the well ones. This class as a rule do not take any farm papers or poultry journals and say the bulletins sent out by the state stations are all bunk. I told a woman she should subscribe for a poultry paper. She said, "What do those city guys know about chickens. I have been raising them for forty years." These people lose money on chickens.

On the other hand we have the farmer who is wide awake trying to improve his condition. They are building modern hen houses, buying purebred stock and feeding balanced rations. You will find farm papers and poultry papers in their homes. They are using modern methods and succeeding. They are not cussing the administration because their hens do not lay in the winter. You see them come to town with their eggs and cream and pay cash for their groceries. A merchant told me the other day that the farmers who took care of their chickens and cows were the ones that had the cash.

I keep a small back yard flock of White Rocks. Last year my hens averaged 152 eggs each and cleared \$97.62 above feed bill.
L. B. Shaw.

Missouri.

Early Hatching.

I have been reading your journal for four years and wish to say that I have received some valuable information regarding poultry from it and could not very well get along without it. I am an amateur breeder on a small scale, having had about five years' experience with chickens, but will say I have made wonderful strides in that time in the way of breeding up and working out a feeding system that will produce the eggs.

I notice nearly every issue of your journal carries some article pertaining to molting, etc. I also notice a great many advocate extra late molting hens, some as late as December. Well, this probably might be best for some localities, but for my location I am always pleased if my hens molt during August and September, and I am going to tell the reason why. I am located in the eastern part of Texas, about two hundred and fifty miles nearly north of Galveston, so we have some pretty hard winters, especially during January and February. However, the thermometer seldom ever goes below twenty. Very few days that we have to keep the hens in. So, if one has good producers and properly feeds, he should be able to get a good egg yield through the winters here. This brings us back to the molting proposition again. How is a hen going to lay winter eggs when she is molting

Bred to Lay

"SISTER SU" RECORD 237 "OCONOMOWOC" DAMS RECORD 297 "SISTER LU" RECORD 237

MAPLESIDE POULTRY FARM
O. F. MITTENDORFF PROP., LINCOLN, ILLINOIS.

She cannot do it if she is molting. The majority of my hens molted during August and September of 1920, and let me tell you they began shelling out the eggs the middle of last October.

This has been my experience for the last three years with August and September molts.

Another thing is that my females are hatched during December, January, and February. They always make the largest, develop fastest and invariably make the best layers. In order to hatch during these months my hens will necessarily have to molt through the summer and autumn, and, anyway, who wants to get eggs through the summer, the proper time for mongrel to lay? Eggs are very low in price and poor in quality in this part at that time of the year.

I notice quite a good deal of talk concerning early hatched pullets going into molt in the fall or winter. I have never had any pullets hatched real early, say January, to go into molt during the coming fall and winter, but I do not say this is impossible, only it has never happened to my stock, and I certainly shall continue to hatch early and work for the late summer and autumn molt in old females.

C. C. Senter.

Texas.

TURKEY RAISING.

Having had good success with my turkeys. I feel that my method may be helpful to someone else. I hear it said: "I can get my turkeys hatched but I just can't raise them."

With proper care anyone can raise a good percent of their hatch. At the beginning keep your breeding stock in shelter during rains and blizzards. If they catch cold or their heads turn dark and there is a rattling in their throats, give them one tablespoonful of coal oil in three tablespoons of pure warm lard. Repeat if necessary. The coal oil cuts the cold loose and the lard works it off.

Then when the laying season begins the busy housewife can save many unnecessary steps by shutting the hens up when they show signs of hunting nests. When they seem real anxious to get out, have nests prepared near the house, turn them out and watch them real closely until you are sure they are satisfied with their nest. Also notice them the second day to be sure they go on the same nest again. After this they are not likely to change their nest. Then it will not be necessary to go a mile or so away in the woods every evening to get the eggs when there are so many other things to be done.

Keep the eggs in a room that is neither too warm nor too cold. Turn every day. Date each egg as you get it. Then if you do not get them all set at the same time you will be sure to set the older ones first. Do not let them get too old before setting. If you do the little turkeys do not seem near so healthy, and very often you will get a poor hatch.

Each turkey hen can cover from 19 to 21 eggs, but it is best not to crowd them too much as it causes many broken eggs.

If the hens set well the eggs will hatch in 26 or 27 days.

I take the little turkeys from the nest as fast as they hatch and keep them in a warm box until they are old enough to put with the hens. This keeps many from getting mashed in the nest.

SAFER SHIPPING

So long as engines jump the rails there will be risk in shipping—but it is our special mission in life to make the shipping of hatching and utility eggs and poultry a SAFER process. Anderson Boxes gives maximum safety and minimum of packing and shipping costs. Used by world's biggest fancy poultry and egg shippers. Anderson boxes are attractive. They are low in first cost. Ship with safety in Anderson boxes.

ANDERSON Master Breeders CHICK BOXES

Thousands of chicks die in the every year for the want of proper moisture conditions. Correct moisture conditions will increase the hatch and make large, strong chicks; that are easily reared. The Stitt Adjustable Humidifier for Incubators, can be regulated for any amount of moisture desired. Price \$1.25.

ARRANESS MFG. CO. Cedarhurst, N. Y.

Do not feed until 48 hours old. I find the best feed for them to be light bread moistened with sweetmilk, clabber cheese, and cornbread made from finely ground meal; all mixed together.

Feed five times a day the first ten days only feeding a little at a time. Give them plenty of fresh water and sweet milk to drink. After the first week the light bread may be left off, feeding the cheese and corn bread only.

Little turkeys in our vicinity are subject to a sore mouth which few people know anything about, beginning from two or three days up to three or four weeks. Their mouths and tongues look raw and yellow spotted. They will pick up their food and drop it again. They do this over and over, yet they never swallow a bite. They slowly but surely starve to death and you may not realize what is wrong with them. Quite a number die this way each year when it could be prevented by using one-half as much coal oil as lard, using a feather to put in the roof of their mouth and about their tongue. A little sulphur mixed with it is also good. I begin when they are three days old using twice a week until four weeks old.

Keep their feet warm and dry when real young. If they get wet or cold they will take white diarrhea and your flock will be thinned considerable in a short time. Always keep them up until the dew has dried off and out of rains.

Last year by accident my little turkeys got out in a heavy dew and next day at noon most of them were sick. Their heads were drawn back and they would flutter as if having fits, and would soon die. By night I had lost sixteen and more were sick. I gave each of those remaining 2 or 3 drops of warm lard. Next morning there were two more dead and I didn't loose any more.

Gapes are also common among young turkeys on our soil. I advise London purple for gapes. It is sold by all druggists. Use according to directions.

Keep them free from lice and give them free range. Always let them run with turkey hens if possible as they will roam over the fields and woods, getting insects which they need and relish. Do not change feed unless it is absolutely necessary. Then begin by mixing the food they are used to, with the new food you are beginning with and gradually taper off. This way the change does not hurt them.

After July I only feed enough feed to make them come home at night, until I begin feeding them for market.

When two or three months old they begin flying up on fences or branches of a tree to roost. This is all right as long as you put them in shelter cold or rainy nights.

Never feed new corn until it is thoroughly dried. In most cases it gives them yellow cholera. As most turkey raisers know, after a few feeds of new corn their turkeys begin getting sick after being healthy all summer. When one takes cholera they should at once be removed from the flock. Feed only light food such as bread and milk, rolled oats moistened with milk or something similar.

I feed them pretty heavy just before selling time. The highest price is generally paid from Nov. 10 to 15 and Dec. 10 to 15.

I have written this especially for the benefit of farmers' wives who are disgusted with turkey raising, feeling that

New Lamp Burns 94% Air Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, K. P. Johnson, 609 W. Lake St., Chicago, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make \$250 to \$500 per month.

Makes 'em Pay!

E. H. Eggleston, author of American Squab Culture puts pigeon raising on a money-making basis. His book is based upon successful pigeon experiences—no theory. Every phase of the squab business explained, from egg to market. Valuable guide to beginners; starts you right. 284 pages, 70 illustrations. Cloth bound. \$2.00 per copy postpaid—money back if not satisfied.

DISEASES OF POULTRY

By D. V. Salmon. 252 pages; 72 illustrations. Every poultryman needs this book. The cause, symptoms, care and remedies for each disease fowls are subject to are given. Price 75c. American Poultry Journal Pub. Co. 523 Plymouth Court, Chicago, Illinois

it will be a help to them. I was once very much discouraged myself, and quit the business. Then I started in again and began studying their diseases and have found out many things that have helped me. I now take pleasure in the work and feel that I can make more clear money with my turkeys than any other poultry.

Last year I raised a nice bunch that averaged \$5.78 each. I hope this will be a help to all who read it.

Missouri. Mrs. Nettie Dow.

Black Leghorns.

By Plummer McCullough.

The writer has always been greatly interested in the different varieties of Standardbred poultry that were, comparatively speaking, unpopular; that is, varieties that had not been among the leaders in popularity. We have often wished that we were able to take up many of these varieties and breed them the way we would like to and help bring them into popularity. This is impossible; but eight years ago last fall we purchased a pen of Black Leghorns consisting of four hens and a cockerel. The Black Leghorns have never enjoyed the popularity that many of the other Leghorn varieties have, and I purchased these about as much for curiosity as anything else. However, after keeping them, I have really grown to be a great friend of the Black Leghorn, have bred a small pen of them ever since and can truthfully say that they are a very worthy variety.

Color of Plumage.

The Blacks breed quite true to color if carefully mated. There are some color defects that must be ever guarded against, however, if any progress is to be made. White in black varieties is always a defect to contend with. It is present in Black Leghorns to a certain extent, especially in male birds. The hens and pullets have a great deal fewer color defects than the males.

Males are prone to have white in undercolor, especially at base of saddle and tail, and in undercolor of hackle, and sometimes on back. White on wing tips is also a very frequent occurrence among male birds. Personally, I don't think this is as serious a defect as the white undercolor in hackle, back, and at base of tail. This defect must be overcome and it is in many birds today, but we still find many with white in undercolor.

Hens and pullets almost invariably have sound undercolor and by using males for breeding that have only sound, or nearly sound undercolor, I believe that this light undercolor can be gradually bred out.

Another defect that I find more troublesome than white is red in male birds. Sometimes one of our very best cockerels will have a few small red feathers in wing bow or hackle and it is a rather annoying thing to find these in your best birds. Red has also showed in males after they have been in the sun all summer; and before they get their new coat of feathers they often show considerable red or rust color in hackle. This to me seems more like a form of "brassiness" in a black variety, as it disappears after the bird gets his new coat of feathers and does not reappear again until middle summer or early fall. My opinion is that it is caused by the sun chiefly, but, of course, it is a defect, or, in fact, a disqualification. But just the same we want to breed our Black Leghorns so they will stay black the same as the white variety will stay white. We think it can be done by careful selection.

Purple is, of course, always more or less troublesome in black varieties, but to me it is not so much trouble as the red and white. I am rather of the opinion that some of our Black Leghorn breeders have used some dark Brown Leghorn blood in the Blacks at some time or other, as this continual red cropping out rather shows it, and a year ago last season from a mating of two hens and a cockerel from one of our best breeders of Black Leghorns we hatched and raised to maturity one pullet that was in reality a Brown Leghorn. She was good Leghorn type and a very good little bird along this line, but in color was very similar to a dark or cockerel-bred Brown Leghorn female, only not so rich in color. This, with other little things that I have seen from time to time, has forced us to the conclusion that some Brown Leghorn blood has been used during the past few years in the Blacks, perhaps to improve the leg color of the latter.

Leg color in Black Leghorns has always been another point that has caused a constant

Quality White Wyandottes

The 1921 Heart of America Show is now history. Sullivan's White Wyandottes for the fourth time at this great show completely crushed all competition. Here in the Middle West, where the finest horses, cattle and hogs of the world are grown, the greatest Strain of White Wyandottes are also produced. In a class of 154 of the finest White Wyandottes ever exhibited at the Quality Show in competition with many Star birds direct from the leading Eastern yards Quality White Wyandottes proved their superiority by winning Cocks, 1-2-3-5-6; Hens, 2-3-4-5-8; Cockerels, 1-3-7; Pullets, 1-2-6-7; Pens (old) 1-3-4-5; Pens (young) 1-2-3-5; best display and other specials.

COCKS, HENS, COCKERELS AND PULLETS 1500 for Sale—The Real Sullivan Kind—1500

NEW 96-PAGE BOOK FREE

Valuable Information on How to Get Big Winter Egg Yields—How to Tell Slackers and Poor Layers—Saving Feed—Keeping Hens Vigorous and Free From Disease.

Written by T. E. QUISENBERRY.

YOUR big opportunity is at hand. Never before have poultry raisers been confronted with a condition of high egg prices alongside of low feed prices.

In many sections of the country, one dozen eggs will pay for two or three bushels of grain, and there is no indication or reason for eggs to drop in prices for some time.

Fresh nearby white-shell eggs in New York are selling at \$1.00 per dozen. Fresh country eggs, assorted colors, retailed at 80 cents to a \$1.00 a dozen in many large cities. January and February prices are certain to be high.

Now is the time for poultry raisers to make the most of this opportunity for high profits. For weeks, months—yes, for years—to come there is a sure and big profit in egg production for those who know the simple, easy feed and labor-saving methods of getting big egg yields.

But right there is the "Pea in the Pod" of the whole business—you must know how to cull and select your good layers. Thus you save the cost and food ordinarily consumed by loafing, unprofitable hens. Then you must know how, when and what to feed to insure big egg yields and the saving of feed.

That is why we are particularly pleased to announce to our readers

T. E. Quisenberry,

Author of this big, new 96-page book is recognized as one of the most successful poultry farmers and egg producers in the world.

that this big, new 96-page book by T. E. Quisenberry, President of the American Poultry School, Department 206, Kansas City, Mo., will be sent to each and every reader who writes for one. You want plenty of eggs now, and Mr. Quisenberry's new 96-page book will show you how to get them right now.

This book by Mr. Quisenberry contains 96 pages of interesting poultry reading, many photographs of poultry, buildings, equipment, etc. However, there are sixteen pages especially devoted to telling "How to Get More Eggs on Less Feed—How to

Cold, Stormy Winter Days—How to Keep Hens Healthy and Happy—How to Cull Out Loafers and Select Layers—How to get Fertile Eggs and Prevent Dead Chicks in Shell at Hatching Time," and hundreds of other money-making and labor-saving ideas for poultry raisers.

Never before has there been offered, with out any charge or obligation of any kind, a book containing so much real valuable and dependable information that is certain to help every poultry raiser. We hope every reader will write Mr. Quisenberry for one before they are all gone.—Advertisement.

fight, as the legs seem to naturally run to dark or dusky yellow color, and sometimes to almost black. This is being largely overcome and black legged or even very dark legged birds are not as common now as they were even three or four years ago. It is now possible, and is being demonstrated right along in the best bred strains, to secure rich yellow legs. They are not only possible, but absolutely within the beauty and popularity of the variety.

We used to think that the Standardmakers were trying to butt against nature too much when they asked for yellow shanks in Black Leghorns and Black Wyandottes, where black plumage and yellow legs go together, but we have since changed our mind after breeding them ourselves. The fact is that the yellow legs are just what sets the Black Leghorn off to good advantage. No matter how good in type or how superior in color your Black Leghorn is, if he has dark leg color he will not look so finished as if he had the rich yellow legs. This is now very evident to us, and is a point well worth striving for.

The color of Black Leghorn chicks, like many other black varieties, is very misleading when the chicks are small. When first hatched the chicks are often almost half white and sometimes more than half white. The white shows up more generally on breast and underparts of the body, but sometimes shows up even on top of back and wings. The wing feathers, when they come in first, will often be all white; that is, a part of the wing feathers will be all white and perhaps some of them half white. Some small white feathers are often likely to show on the heads of cockerels and pullets when young, but both these head and wing feathers will come out as the bird loses its chick feathers, and its mature feathers will practically always be all black. This, then, should not be taken too seriously by beginners especially, for often the chicks when first hatched that are almost half white, will develop into very high quality birds.

Leghorn Type.

The Black Leghorns of today are coming quite true to type. Yet as a variety they are perhaps not quite as typey as the Whites, though we often see many Blacks, especially in hens and pullets; that will compare favorably with the Whites. In males the Blacks do not, as a rule, have quite as much tail furnishings, that is sickles and coverts; also the saddle feathers are not quite as wealthy as one sees on the best Whites. The wealth and finish is being added to the Blacks as fast as possible, but it does not seem to be quite as well fixed as it is in the Whites of today.

In combs and heads we are seeing the Blacks greatly improved. In fact, they are what I term becoming Americanized. The English Black Leghorns, like many other English varieties, have been inclined to be too beefy in comb to suit the American fancy, and this trait is fast disappearing from the present day American Black Leghorns.

From my own experience I find that white in face of aged males is not as common in Blacks as it is in Whites, and I believe that this is generally the rule. Red in lobes must be guarded against and by mating birds that are good only in head qualities we can soon have the Blacks the equal of any of the Leghorns in this section.

Utility Qualities.

The utility of the variety needs no booming to anyone who has ever tried them. There is occasionally a poor layer in the Blacks, the same as in the other varieties. I believe that by careful selection a flock of Blacks can be made the equal of any of the other varieties of Leghorns, or any other breed for that matter, as far as egg production goes.

They are not bred in so great numbers, so breeders have not had so large a field for selection. Nevertheless they are real layers of medium sized white eggs and they will not disappoint anyone along this line. While we are not claiming them to be market fowls, they are, when dressed, a very respectable looking fowl, as they have yellow skins, and for a small family they are plenty large enough to make a full meal.

That the Blacks are becoming more and more popular every year is very certain. When I first purchased my pen I had to hunt pretty close to find any one who had them for sale. But such is not the case today. Black Leghorn breeders are advertising and some of them are using good sized space. They are also exhibiting their birds at the leading shows, which is indeed a good way to help increase their popularity. There is also a very good demand for good Black Leghorns and we believe that anyone who wants to take up some variety like the Black Leghorns will find that he will have no trouble in finding sales for all his surplus stock. This has been the experience of every breeder

Robadel Orpingtons

WHITE, BUFF AND BLACK

FACTS—For the past three years **ROBADEL POULTRY FARM** has been the largest individual exhibitor of Standard Bred Poultry in the greatest Poultry Show in the world, **MADISON SQUARE GARDEN**.

ROBADEL WHITE ORPINGTONS won best display in **MADISON SQUARE GARDEN**—1919, 1920 and 1921.

ROBADEL BLACK ORPINGTONS won best display in **MADISON SQUARE GARDEN**—1920 and 1921. Did not show blacks in 1919.

ROBADEL BUFF ORPINGTONS have never won best display in **MADISON SQUARE GARDEN**, but have always been in the winnings, and will try again.

Robadal Orpingtons Are All Line Bred

Every bird we exhibit is bred on **ROBADEL FARM**.

Do not be misled by breeders who purchase their show specimens to win a reputation on some freak egg producing hen.

Do not be misled by misleading, combined winnings where **MADISON SQUARE GARDEN** is included.

We do not sell baby chicks or hatching eggs. However, we are in position to supply you with matured birds for breeding or exhibition purposes—that are absolutely and positively guaranteed.

In our opinion, the **ORPINGTON** has no equal as a general purpose or exhibition fowl.

If you have been disappointed in **ORPINGTONS**, try again, but try right.

Correspondence solicited.

Robadel Poultry Farm, Box A, Cos Cob, Conn.

Charles Hubbard, Manager.

whom I have talked to or heard from and this again shows that their popularity is increasing.

As a Fancier's Fowl.

The Blacks are surely to become a favorite. They are really beautiful with their glossy black plumage, yellow shanks, red combs, wattles and white lobes, which, together with their graceful carriage, make a combination that takes the eye of every true lover of Standardbred poultry. They show up attractively when cooped for exhibition and do not disappoint you when compared alongside of some other varieties (as I have seen birds of a few other breeds do.)

For the small city breeder who has small room and cannot keep white birds clean for city smoke and soot, I will say that the Black Leghorn does not easily show dirt on plumage and they always look sleek and clean in their surroundings, provided their quarters are comfortable and offer a fit place to keep poultry. So for the city fancier or city dweller who wants a few birds for a home supply of eggs I can cheerfully recommend the Black Leghorns.

For the farmer it seems to me they should entirely fill the bill, as they are great foragers and will not only add much more beauty to the farm than a flock of mongrels, but will also add a great deal to the income of any farm through increased number of eggs, also from the sale of eggs for hatching and breeding stock if any farmer cares to go into this as a side line. No matter whether it is a city dweller who wants eggs for home use, a city fancier, the farmer or the commercial breeder we believe that after a trial each of them will agree with us that the Black Leghorn is one of the best varieties of Leghorns we have today and one of the best of any breed of Standardbred poultry. They are not a has-been. They are an old and established variety and are here to stay and have proven their worth. If you are contemplating a change in variety, or are thinking of taking up something else, something that every one else does not have, and still something that is coming right along in popularity, and for which there is a good demand, give the Black Leghorns a little tryout, and our opinion is that you will stick to them.

Poultry in Nebraska.

A comment by the editor of American Poultry Journal upon a letter written by Chas. T. Cornman, who is in poultry extension work in our state, and the letter itself, ought to bring words of protest from every loyal citizen of our great state.

Poultry extension work in Nebraska has accomplished a very great deal, but there were many people interested in this work years before Mr. Cornman came into the state.

The first practical demonstration work along this line was done by our state university through Prof. M. E. Dickson as head of the state poultry department and poultry farm, followed by our very worthy and capable friend, Prof. F. E. Mussehl, who is now at the head of the farm demonstrative work in the poultry department of our university. There have been several extension workers in Nebraska who have done splendid work.

The Cornman letter and the comment thereon would leave the impression with an eastern reader that Nebraska was truly an undeveloped poultry state, and that the poultry raisers of the state were strangers to the art of rearing Standardbred fowl of all kinds, when in fact she exhibits live stock and poultry in the greatest shows of the United States; and as far back as 1915, at the Panama Exposition at San Francisco, Nebraska drew 92 first prizes, more than any single state in the Union. Nebraska also has the oldest legalized State Poultry Association in the United States and has held 36 consecutive exhibitions without a miss, and her show is regarded as one of the banner state shows of the country.

The writer having been an officer of said association for 8 years, terminating January, 1921, by resignation, and having received inquiries all these years by the farmers and poultry raisers where they could obtain Standardbred fowl, and being a breeder of Standardbred poultry for over fifteen years, continually working for better sires and stock, like hundreds of others in Nebraska, knows of the development of the industry in the state.

As one of the old-time breeders and enthusiasts, I hope that we may have more extension poultrymen in our state and that the good work will go on unhampered, but a protest should go up against statements indicating, in a measure, that Nebraska as a poultry state is a prairie across which rolls the tumbling weed and Russian thistle born by the bleak winds of a devastated country, and where the foot prints of the savage are scarcely obliterated from the surface of the soil; and I protest against the credit being taken from the whole department of our university, and from

Better Service Boilers

For Incubators and Brooders

BSB boilers are now furnished with a dependable automatic regulation, together with all pipe and fittings up to flanges, including thermostat, thermometer and expansion tank—which makes them adaptable to all makes of hot-water incubators and brooding systems. A few second-hand incubator sections and a BSB boiler make a very economical and efficient hatching outfit.

Scientifically Designed

BSB boilers are made throughout from the highest grade cast-iron and are not subject to the detrimental influence of rust. Cast extra heavy, scientifically designed to utilize all available heat, BSB boilers are not only practically indestructible—but are also fuel economizers.

Cast in Several Sizes

The smallest BSB boiler is made with as much care and as great durability as any of the larger sizes. Each size boiler has ample fuel space in the deep firepot section, which is so arranged (see illustration) that the best natural combustion is secured with the minimum of fuel consumed. Ordinarily it is not necessary to feed the fire more than once or twice in twenty-four hours.

Automatic Temperature Control

BSB boiler regulation is controlled thermostatically by the temperature of the water, and is a success because it is easily adjusted to maintain a constant, even temperature—with a positive draft control. Simple, accurate and dependable.

Best Rolling Rocking Grates

BSB boiler grates are durably constructed, and designed to burn all grades of fuel. They allow for liberal air space, yet the fingers of the bars are sufficiently close together to permit the use of pea or slack coal.

Sold At Factory Prices BSB boilers are sold direct at factory prices and not through dealers. This enables Poultrymen to obtain a dependable and efficient boiler at a minimum cost. Write us for what purpose you desire a boiler and we will recommend the proper size and quote price.

Write for the BSB Circular Boilers, Radiators, Fittings, Hot-Water Thermostats, Hot-Water Thermometers, Incubator and Brooder Thermometers, Wafer Thermostats, Expansion Tanks, etc., at factory prices. Write for illustrative circular today.

VACCINATION Produces Results

Read what a breeder has to say:—
American Scientific Laboratories, Inc.,
157 W. Kinzie St., Chicago, Ill.

Gentlemen: I wish to inform you of the very satisfactory improvement of my flock following the use of your Bacterin.

We had over 400 birds affected with roup—10% seriously. The majority were vaccinated only once. Ten days after treatment even the seriously affected ones were practically well. My whole flock is now entirely rid of the disease and egg production on the increase. Some birds had terribly swollen heads with lumps of cheesy substance in the eyes. Next fall we will vaccinate earlier.

Yours very truly,

A. M. MELLIER,

Mellier Poultry Farm, R. F. D. 7, Mt. Clemens, Mich.

AMERICAN POULTRY JOURNAL

523 Plymouth Court

CHICAGO, ILL.

the very worthy breeders of Standard fowl who, with the extension department, have for many years endeavored to make Nebraska a very great state in the industry.

There are many laws needed in Nebraska to make poultry raising more profitable, such as compelling the grading of eggs and fowl for market, county aid for demonstrations and exhibits, etc., and such help will come, but not in a day, for this can be brought about by the combined effort of all people interested in poultry and not by a few.

The resources from poultry in Nebraska in 1918, as passed through the channels of commercial trade was \$56,000,000, and in 1920 \$60,000,000.

Nebraska

M. G. Scudder

Specialty Club Standards.

(Reprinted from American Poultry Fancier)

At the New York State Fair last month, D. Lincoln Orr, secretary of the Madison Square Garden and Washington shows, and Theodore Hewes, manager of the Chicago Coliseum, Cincinnati, Buffalo and Indianapolis shows met and discussed A. P. A. as well as show matters. Among them the advisability of recognizing the specialty club standards was seriously considered, so we are given to understand. Not being present at the confab between Dad Hewes and Link Orr, we do not presume to state what conclusion they arrived at. The wish is often the father of the thought however, so we may presume that the recognition of the individual club standards, was favorably considered by them. That was in the East in September. Out West in October appeared the American Poultry Journal with an article by Secretary Rolf of the National White Leghorn Club who advances the idea boldly and frankly of printing and distributing a Leghorn Club Standard. A. F. Rolf is a progressive official of his club, one who evidently believes in pushing his variety of the Leghorn family, to the limit in point of widespread recognition of its exhibition and utility properties.

He believes a specialty club standard will afford the most powerful means for accomplishing this. He does not, however, believe that President Rigg's suggestion to sell specialty clubs the privilege of publishing their variety standard at 50 cents per copy, will allow the standard to serve its greatest purpose.

We happen to know that Frank Platt thinks this is an important issue as the wide distribution of the Standard will create more extensive breeding of standardbred fowls in his opinion. We also understand that Theodore Hewes practically endorses Mr. Rolf's idea. Another well known poultry editor in the West (Fred Hallett), expresses the opinion that breeders have been standing in their own light by not following the policy of the other live stock organizations in making available to every breeder a copy of the Standard which covers the stock he is breeding.

The American Poultry Association receives nothing in the way of fees, except those from life members and licensed judges which are but a drop in the bucket of kale needed to keep the executive machinery supplied; the sale of standards furnishing most of the long green to keep it in motion. The Standard is the A. P. A.'s monopoly on revenue, the A. P. J. truly concludes. That in our opinion is the crux of the standard situation. Without such revenue derived from the sales of standards the American Poultry Association could prove a dead cock in the pit. With specialty standards flooding the country, the sale of the American Standard of Perfection at \$2.50 or \$3.00 would prove suicidal from a business standpoint.

It is up to the American Poultry Association to solve this problem for the very existence of the old organization depends on its Standard and the proper distribution and respect it commands for it.—J. H. Drevendstedt.

THE SMALL FLOCK

The large poultry house with its 250 to 500 birds is quite out of the question so far as the average working man is concerned. It may be desirable, but since the pocket will not permit it, the working man need not discuss it. Fortunately, the large house system is not the only successful system. It is an accepted fact that the smaller the unit the better the individual record. But in the smallness of units there is a limit for commercial purposes, and we believe that that limit will be found in a flock of about 40 birds. A suitable house 12 ft. front x 16 ft. deep will accommodate 50 birds, and we believe that in houses of this size the working man with limited capital will find an outlet for his energies within the limits of his purse.

CLASSIFIED ADVERTISEMENTS

UNDER this heading ads will be inserted for fifteen cents per word each month for less than three months, or **thirty-six cents per word for three months.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of \$1.50 per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers, mention AMERICAN POULTRY JOURNAL. **All copy for Classified Ads must reach us by the 17th of month preceding the date of issue. These Rates Void After May 20th, 1922.**

ANCONAS.

Little Journey Among Anconas

Some might take this "Little Journey Among Anconas"—it will fascinate you!—and you will profit immeasurably from the experience.

Between the two substantial covers of this latest book by the Ancona specialist, H. Cecil Sheppard, is packed all the "meat" of Ancona history and experience since the early discovery of this prolific breed. Mr. Sheppard's amazing winnings for many consecutive years at Madison Square Garden, New York, entitle him to write the leading text book on Anconas.

"A Little Journey Among Anconas" is offered postpaid for \$1.00. It will show you how to get more profit and greater pleasure from your poultry.

H. Cecil Sheppard
Box 439 Berea, Ohio

Cockerels

OAK DALE Cockerels are the leaders of the poultry world. Right now is the time for you to order cockerels—don't delay. Oak Dale Cockerels have always been at a premium and the breeder who gets his order in now will get first choice. Look at these prices, is it any wonder that our birds sell first?

\$5.00 and \$10.00
the Bird

Baby Chicks

have long bodies and stocky legs. All are bred from stock that has won the majority of prizes at Madison Square Garden for over twenty years. These Chicks will grow and thrive and develop into large profit producing specimens. The laws of heredity and transmission are permanent—each new crop of Chicks will bear the likeness of their parents and ancestors. When you buy from us you procure for yourself the selective breeding of generations. An Oak Dale bird will produce its own kind, and therefore reliability exists in its breeding. Don't delay. Send in your order today for any amount.

Send Today For 1922 Mating List

Therein you will find listed the most marvelous Single Comb White Leghorn Winners of the past twenty years. And whose progeny we are offering to you at prices within the reach of all. We can also furnish you with Pens, Trios, Pairs and Single Birds.

The Mark of Quality

Oak Dale Poultry Farm
Box A Austin, Minn.

OAK DALE *Single Comb* WHITE LEGHORNS

Hatching Eggs

Every Oak Dale egg that finds its way into your incubator or under the mother hen will send forth from its shell, a good sized, livable chick that will have inherent strength and vitality sufficient to enable its continuous growth and development.

You cannot afford to incubate other than the very best of eggs. The fertility of Oak Dale eggs is always satisfactory because Oak Dale breeders are kept under conditions allowing plenty of exercise and they are given the best feeds obtainable. We send you eggs that are of perfect shape and construction only. Place your order today and also ask for our beautiful catalog and mating list.

SHOW BIRDS—To win at your particular show, Mr. Exhibitor, you must have some assurance that you purchase birds that will do this for you. For more than 20 years Oak Dale Leghorns have carried away the highest honors at Madison Square Garden and Boston.

30 Prizes Out of 30 Offered

Sweepstakes Championship Male and Female and Every Special Prize—every bird bred on my farm.

This amazing record is an exact duplicate of the Imperial "Ringlet" record of 1920 at Madison Square Garden.

These 100% Perfect Records are the crowning achievement of the unexampled "Ringlet" Records at New York for more than 30 victorious years.

The competition at this show was stronger in quality than at all the other shows of America combined—a fact that every breeder knows only too well.

Supreme at Madison Square Garden Is Supreme Everywhere

GRAND WINNING SHOW BIRDS

The finest that all America has ever produced are now on my farm ready to win Blue Ribbons and Silver Cups for you in any competition in the world, in Cocks, Cockerels, Hens, Pullets and Pens. Their matchless "Ringlet" barring wins under all judges. As layers they stand pre-eminent.

I SHIP BIRDS AND EGGS

from the best on my farm. I believe the most prominent breeders everywhere are using Imperial "Ringlets" to improve their stock and that there is not a fine Barred Rock—either male or female—in all America today that does not contain "Ringlet" blood.

During the past ten years the matings on my farm have done more to improve the Barred Rocks of America than all the matings of the whole country combined.

I have shipped thousands of sons and daughters of my Madison Square Garden winners—the finest birds that ever lived—and eggs from these prize winners.

Imperial "Ringlets" are the standard for all the Barred Rocks in America.

Elegant catalog mailed upon request

EGGS From the finest exhibition matings in the world. One setting \$20, two settings \$35, four settings \$60, 100 eggs \$90

FEBRUARY, 1922

NO. 2

15c
Per Copy

“HUR

“Grand Champion of the Entire Show

with over 3,200 birds in competition,” so jubilates a pleased customer in his letter just received. MY ARISTOCRAT COCKEREL WAS CROWNED KING OF ALL IN THIS MONSTER SHOW.”

“We Win! We Win! Over All!”

Thus come the joyous tidings from Aristocrat customers EVERYWHERE. THOUSANDS OF SHOWROOMS ARE WITNESSING THE TRIUMPHANT MARCH OF THE ARISTOCRAT BARRED ROCKS TO VICTORY. The sensational records which my customers are making with Aristocrats simply stand unsurpassed in the annals of all Barred Rock history.

And this Winter, even right NOW, the winnings made by them are greater and more astonishing than ever before. The Great National Barred Rock Club Show (the greatest of all the great ones) Chicago, the “Heart of America,” N. Y. Palace, Guelph, New Orleans, The “Tri-State,” Dallas, Cleveland, Detroit, St. Louis, Los Angeles, Brooklyn, San Francisco, Winnipeg, Pittsburg, Minneapolis, Indianapolis, Boston—ALL, ALL PAY TRIBUTE TO THE WONDERFUL EXHIBITION QUALITY OF THE ARISTOCRATS AND HAIL THEM AS VICTORS.

Holterman's Aristocrat

It is to your interest to know that the very same male birds and females (THE SAME IDENTICAL COCK BIRDS AND HENS) which produced the greatest of all Aristocrat prize winners last season are again mated up in my yards RIGHT NOW. THEY PRODUCED THESE PRIZE WINNERS LAST SEASON. THEY WILL NATURALLY PRODUCE SUCH QUALITY AGAIN FOR NEXT SEASON. These are tested breeders, breeding birds which have been tried out, proven, and have made good. My customers positively get eggs from EVERY FEMALE in my matings. Not one is reserved exclusively for my own use. (Read this paragraph again) It has become well known throughout the entire country that Holterman is the man who is sending out TO HIS CUSTOMERS THE BEST BARRED ROCK EGGS THAT CAN BE PURCHASED ANYWHERE AT ANY PRICE.

Grand Aristocrat Cockerels:

Wonderful, guaranteed male birds, linebred, vigorous, and with the power to reproduce their own great quality in the young stock will be of priceless value to you. These splendid Aristocrat cockerels are so rich, so superb, so outstanding in quality that they will appeal to you at once. Such Aristocrat cockerels will help to PUT YOU IN THE LEAD AS A BREEDER. EACH AND EVERY ONE IS ABSOLUTELY GUARANTEED.

Remember—Holterman is the man who is furnishing the Real Winners in Thousands of Showrooms Throughout the World

W. D. HOLTERMAN, Fancier

RAH!"

"Glorious News! Friend Holterman" Writes Another

"MY WONDER ARISTOCRAT HEN, BUSY BEE, which I hatched out of the eggs you sent me, has just gone into molt and I believe has now stopped laying for the time being. But—and now listen, Mr. Holterman—SHE LAID EXACTLY 361 EGGS SINCE HER MOLT LAST YEAR. Isn't this glorious? Isn't this perhaps

A New World's Record for Laying?

Thus these two enthusiasts. Reports similar to these are coming in by the hundred, BY THE THOUSAND. They are coming in a continual stream in every mail from all parts of this country, from Canada, from Mexico, from South America, from Europe, Asia, Africa, Australia—from every continent on the globe. (Perhaps you who are reading this are one of this great army of ARISTOCRAT BOOSTERS.)

OUR BEAUTIFUL ARISTOCRAT SHOW BIRDS ARE WONDERFUL LAYERS—291 eggs in a calendar year, 285 eggs in 12 months, 284 eggs in 365 days, 262 eggs in 11 months, 250 eggs in 10 months, 260 eggs in 270 consecutive days—from individual Aristocrats—such ringing messages come from State after State, from Province after Province, from Country after Country—from "India's Coral Strand," as well as from "Greenland's Icy Mountains." Everywhere stands forth this great combination of Aristocrat Barred Rocks,—viz.: GREAT SHOW BIRDS—GREAT LAYERS—GREAT MARKET FOWLS. The greatest Money Making Combination that you can possibly get.

Barred Rock Eggs

THE EGGS from these grand producing matings are \$15 per 15; \$25 per 30; \$40 per 50; \$75 per 100; \$300 per 500; and \$500 per 1,000. DO YOU KNOW THAT BIRDS VALUED AT \$250.00 AND \$500.00 EACH WERE PRODUCED LAST SEASON OUT OF THESE VERY SAME MALES AND FEMALES AND THAT MY CUSTOMERS GET EGGS FROM JUST THESE PRODUCING MATINGS? Think it over!

WARNING: During the real hatching months each season I am swamped so with egg orders that it is simply impossible to fill them all. For your protection, therefore, it will be best to book your egg orders at once for delivery when you want them. Only a small amount required as deposit.

Send for your **FREE** copy of *Aristocrat Egg Booklet* and "*How to Make Money with Aristocrates.*" These contain *Overwhelming Evidence to prove the above statements to your entire satisfaction.*

Aristocrat Trios and Pens:

That will breed for you, right in your own yards, grand **PRIZE WINNING SHOW BIRDS**, and at the same time **PROLIFIC LAYERS**, which will fill your egg baskets beyond your fondest dreams—can still be had at this writing. **BUT HURRY** Why not let a Master Breeder of Barred Rocks mate your foundation birds just as they should be mated? They will put you on the road to success.

17,213 EGGS FROM 910 EGG BASKET STRAIN WHITE LEGHORN PULLETS IN MONTH OF DECEMBER RECORD FOR 30 DAYS IN COLD NORTHERN MICHIGAN CLIMATE. 910 PULLETS RAISED FROM 2,000 EGG BASKET STRAIN CHICKS PURCHASED FROM THE GRAND VIEW POULTRY FARM AND HATCHERY BY MR. FRED LAROS OF HART, MICHIGAN.

Be an intelligent buyer of day old chicks for 1922. Your success or failure will depend on this. If you buy the EGG BASKET STRAIN you take no chances. Thousands of our customers like Mr. Laros of Hart, Mich., testify to their high egg producing qualities and their unexcelled Fall and Winter laying.

WINNERS AT THE EGG LAYING CONTESTS. First prize, highest individual in entire contest, all breeds at Illinois EGG LAYING CONTEST FOR NOVEMBER.

First prize, same classification at Murphysboro, Mo., for month of December, best Leghorn breeders competing.

All first except one at LEADING UTILITY POULTRY SHOW in U. S., at Holland, Mich., hundreds competing.

Best display, winning 540 points, lead of 200 points over nearest competitor at Zeeland, Mich., show.

WON \$100 Silver Cup at Grand Rapids, Mich., 1st Hen, First Pen.

NO MATTER WHAT CONTESTS WE ENTER, OUR BIRDS ALWAYS ARE WINNERS OF SILVER CUPS, DIPLOMAS, RIBBONS. WIN WITH OUR WINNING EGG BASKET STRAIN S. C. WHITE LEGHORNS.

Years and years of careful breeding for heavy egg production, early maturity, large size, health, long, deep bodies, large lopped combs, has developed these typical birds with Standard and Egg Laying Qualities combined. 11 years ago we started with one 300-egg size incubator. In 1921 we shipped 300,000 EGG BASKET CHICKS and raised over 4,000 breeders. In 1922 our hatching capacity is 100,000 eggs, to supply the ever increasing demand for these Famous EGG BASKET STRAIN CHICKS OF QUALITY.

Why be satisfied with ordinary chicks when you can get these QUALITY CHICKS at about the same price.

This is one of the largest breeding and hatching institutions in the U. S. and paid for entirely by our chicks. So we are selling our chicks at the LOW PRE-WAR PRICE.

EGG BASKET MAID
Prize Hen at Missouri Egg Laying Contest, 1917-1918. Our birds have been consistent winners last three years at shows and laying contests.

Q. DEVRIES
THE GRAND VIEW
POULTRY FARM & HATCHERY
ZEELAND, MICH.

Jan. 4, 1922.
Grand View Poultry Farm and Hatchery, Zeeland, Mich.

On May 15, 1921, we purchased 2,000 of your EGG-BASKET STRAIN WHITE LEGHORN CHICKS from which we raised 910 pullets. We gathered 17,213 eggs during December, or an average of 555 eggs per day from the 910 pullets, a 61 per cent egg yield. Not bad is it? I'll want 3,500 or 4,000 more between April 15 and 25.

FRED LAROS.

THEY KEEP THE EGG BASKET FILLED FALL AND WINTER WHEN EGG PRICES ARE HIGHEST.

Berrien Spgs., Mich., Feb. 2, '22.
I noticed your record at Ill. State Egg-Laying Contest and winnings and winter records of pullets, No. 314 laying 23 eggs in December. We purchased 500 chicks from you last Spring and trap-nested the pullets and following is record for November and December, 60 days: 47, 48, 52, 54, 54, 54, 53, 56, 55, 47. One laid 26 eggs in December and two laid 25 eggs each.

IMMANUEL COLLEGE, S. A. Smith, Sec.
EGG BASKET STRAIN S. C. WHITE LEGHORNS DEVELOP EARLY

Cowdell, Mo., May 2, 1921.
Received the 1,600 chicks O. K. with only 2 dead. They are doing fine and dandy; raised 95 per cent at 5 weeks old, nearly feathered out already. Will be productive layers. Make price on 1,000 more. Turymen Snider.

BUY OUR FAMOUS EGG BASKET STRAIN S. C. WHITE LEGHORNS AND TAKE NO CHANCES. WE HAVE TWO GRADES.

Grade A are chicks from selected females mated with pedigreed sires of high record dams. Direct descendants from our EGG LAYING CONTEST WINNERS.

Grade B Utility matings are also from selected females, in every way typical breeders mated with males of direct descendants from our pedigreed stock and Contest Winners. Also a Special Grade—Certified Chicks from Pedigreed Stock.

WRITE FOR OUR FREE ILLUSTRATED CATALOG with description of stock, winnings, and testimonials, and LOW PRE-WAR PRICES. We hatch 25,000 chicks each week starting March 1.

WE SHIP TO ANY STATE EAST OF THE MOUNTAINS. Parcel Post Paid and guarantee 100 per cent alive, safe delivery to your door.

BYERS' ORPINGTONS

FIRST AND CHAMPION BUFF ORPINGTON ADULT PEN COCK
CHICAGO COLISEUM, DECEMBER, 1918
BRED AND OWNED BY C. S. BYERS, HAZELRIGG, IND.

FIRST AND CHAMPION WHITE ORPINGTON COCK
CHICAGO COLISEUM, DECEMBER, 1919
BRED AND OWNED BY C. S. BYERS, HAZELRIGG, IND.

FIRST BLACK ORPINGTON ADULT PEN COCK
CHICAGO COLISEUM, DECEMBER, 1919
BRED AND OWNED BY C. S. BYERS, HAZELRIGG, IND.

At Chicago Coliseum Past 38 Months

76 of my Orpingtons stood under First Prize Ribbons; 117 of my Orpingtons stood under other Ribbons; 193 of my Orpingtons stood under Ribbons; I won 13 out of a possible 16 Firsts on Pens; I have never lost but one Special for Best Display in Buffs, in Whites or in Blacks at this premier Exhibition—Chicago Coliseum, in past 38 Months.

If you would own this kind, buy into the Strain that produces them.

But be not deceived. Demand that my advertising competitors definitely recite who they showed against or whether they showed against a half-dozen single birds instead of 130, or against no Pens, instead of 30 odd Pens. It is easy sailing where there is no resistance, but competition only tests the merits of your product. Be not deceived, therefore, for there are two distinct shows of real prestige in North America and the Chicago Coliseum is one of them.

MOREOVER, be it remembered that the breeding strength and worth of a Male or Mating depends on the blood lineage behind them. I have been a successful line breeder, exhibitor, promotor and exporter of Orpingtons for 20 years against temporary purchaser-breeders—both wealthy and otherwise. It is, therefore, up to you to draw your own conclusion as to

where you can obtain absolutely dependable quality. Buff, White and Black Orpingtons are a universal business fowl for eggs and meat, not a little unpopular novelty breed promoted by catchy advertising for a first order only. They produce, IN FACT. The demand for Orpingtons is now and here in fact. They are now and will continue to be popular for every practical and other reasons, while other breeds drag along.

NOW for the 1922 Breeding Season. Start it right and profit will result. Start it wrong and loss results. Often \$15 to \$50 invested in a genuine line bred Male will add \$100 to \$500 extra sale value to your young stock next fall, and the Male bird purchased will still be worth his cost. It is the part of wisdom for you to consider this and act now right at the opening of the breeding season.

STOCK PRICES

If you are after the best only—outstanding quality that others do not own—command me. It is impossible to unite both quality and cheapness. That is why this grade is a matter of special correspondence so address me frankly if you are interested in the best only.

Standard Breeders

This grade possesses the essentials necessary in high-grade, reliable breeding stock, capable of producing show birds and excellent sale stock:

Cocks or Cockerels, \$25; 2 for \$40
Young or Yearling Pens\$50
Mating or 10 females and male, \$90
Two Matings (22 birds).....\$160
Four Matings (44 birds).....\$275

Breeding Cockerels

These big, vigorous, Champion line bred Cockerels would improve eighty per cent of the Orpington flocks of America. Remember that one of my LINE BRED birds is worth much more as a producer of superior stock, than some other bird that "looks just as good" but is not line bred. The latter will never enable you to practice corrective breeding nor improve your flock. The former will.

Single Cockerels \$7, \$10 and \$15.
Two \$7 Cockerels \$12.
Two \$10 Cockerels \$16.
Two \$15 Cockerels \$25.

Eggs

From my Champion Exhibition Matings (the best) \$15 per 15, \$28 per 30, \$45 per 50.

From my Special Matings of Champion Blood, \$5 per 15, \$9 per 30, \$14 per 50, \$25 per 100.

All Eggs shipped prepaid and the fertility is guaranteed.

C. S. BYERS

HAZELRIGG, IND.

Promoter of, Judge of and successful Breeder-Exhibitor of Orpingtons exclusively for 20 years.

INDEX TO GUARANTEED ADVERTISERS

We believe that every display advertisement in this issue is signed by trustworthy people, and to prove our faith we guarantee our subscribers against loss due to fraudulent misrepresentation in any advertisement of the following advertisers, appearing in this issue of American Poultry Journal. All we ask is that, in ordering the fowls or goods, you mention to the advertiser that you saw the ad in American Poultry Journal; also that the purchase be made during the month or months in which the ad is inserted, and in case of loss notify us of the fraudulent misrepresentation of the advertiser, giving us full particulars as soon as it occurs. This guarantee applies to all subscribers who are on our unexpired subscription list who mention American Poultry Journal when answering advertisements.

Bank-Guarantee

State Bank of Philadelphia
PHILADELPHIA, PA.

TO WHOM IT MAY CONCERN:

Mr. E. J. Reefer has deposited \$10,000.00 with this bank as a guarantee that he will pay all the prizes awarded by the judges to the winners of this puzzle contest. This bank guarantees Mr. Reefer will do as he agrees.

STATE BANK OF PHILADELPHIA

E. J. Reefer
Cashier.

How many objects beginning with "P" can you find in this picture?

Open to Everybody

Come on. Join in the big puzzle game. Your chance to win \$5,000 or one of the 14 other big cash prizes. Easy and lots of fun. All you have to do is write down the names of the objects beginning with "P" on this picture and send your list in to us. If your list is largest and nearest correct, the judges will award you first prize; if your list is second largest and nearest correct, you will win second prize, etc.

Get a pencil and paper. Start right now. Find all the objects in the picture beginning with the letter "P", such as "pistol", "picture", etc. See how easy it is. Nothing is hidden. You don't have to turn the picture upside down. Every object is in plain sight. You can find them all. Start right away.

Costs Nothing to Try

All you have to do is send in your list of "P" words. If the judges decide that your list is largest and nearest correct, you will win First Prize of \$40 even if you don't send in an order for "More Eggs". But if you order \$1 worth of "More Eggs" and you also win First Prize, you will get \$300. If you order \$2 worth of "More Eggs" and if your list of words wins First Prize, you will get \$600. And if you order \$5 worth of "More Eggs" and your list is awarded First Prize, you will win \$2,000—but if you order \$10 worth of "More Eggs" and your list is awarded First Prize, you win \$5,000.

Win All You Can You don't have to send in an order for "More Eggs" in order to enter this contest. You can win \$40 as First Prize even if you have sent in no order. But if you ordered \$10.00 worth of "More Eggs", the same list would win \$5,000.00 for you. A difference of \$4960.00. Which prize do you want?

Get Busy NOW

Today! Get your list in early. Send your order for MORE EGGS at the same time. Qualify for the biggest prize—for the \$5,000.

E. J. Reefer, Dept. 6022
9th & Spruce Sts., Philadelphia, Pa.

THE PRIZES

Winning Answers Will Receive Prizes as Follows:

	If No "More Eggs" is ordered	If \$1 worth of "More Eggs" is ordered	If \$2 worth of "More Eggs" is ordered	If \$5 worth of "More Eggs" is ordered	If \$10 worth of "More Eggs" is ordered
1st Prize	\$40	\$300	\$600	\$2,000	\$5,000
2nd Prize	20	150	300	1,000	2,500
3rd Prize	10	75	150	500	1,250
4th Prize	10	50	100	250	625
5th Prize	10	30	60	150	375
6th Prize	6	20	40	100	250
7th Prize	6	15	30	80	200
8th Prize	6	10	20	60	150
9th Prize	4	10	20	40	100
10th to 15th	4	10	20	40	100

Observe These Rules:

- The contest is open to every man, woman, girl or boy living in America, except employees or relatives of employees of E. J. Reefer. There is no entrance fee of any kind.
- You must use only one side of paper. You must number your list of names in regular order—1, 2, 3, etc. Your full name and address must be written on each page in the upper right hand corner. Use a separate sheet for anything you may wish to write outside of your list of names and your name and address.
- English words only will be accepted as they appear in the English dictionary. Obsolete words will not be counted. Both the singular and plural of a word will not count; either one of them may be used.
- Compounds or words which are made up of two or more complete English words cannot be used.
- The same spelling of a word will be counted only once even though it is used for different articles or objects, or parts of them. Each article or object can be given only under one name.
- Two or more people may co-operate in answering the puzzle. However, only one prize will be given to any one household. No prize will be awarded to more than one of any combination outside of the family where a number—two or more—have worked together.
- If a contestant sends more than one list under the same name, an assumed name, or a pre-married name then all lists of such contestant will be disqualified. If more than one list is sent by any group or by any members of the same group who have co-operated in the preparation of such lists, then all lists of such contestants will be disqualified.
- All answers must be received through the mail by E. J. Reefer, 9th and Spruce Streets, Philadelphia, Pa., and must be post-marked by Post Office closing time, March 11, 1922.
- The first prize will be awarded for the answer containing the largest and most nearly correct list of the names of visible objects and articles beginning with the letter "P" shown in the picture. No other consideration, such as neatness, style or handwriting, will have any bearing in making the decision.
- The full amount of any of the prizes will be awarded to each contestant in the event of a tie.
- The decision will be made by three judges entirely independent of and having no connection with E. J. Reefer. They will judge the answers submitted and award the prizes at the end of the contest. Participation in the contest carries with it the acceptance of the decision of the judges as final and conclusive.
- All answers will receive full consideration whether or not "More Eggs" is purchased. At the close of the contest, when all lists have been graded, the names of the prize winners will be announced and the list of words will be sent upon request to any participant who sends us a stamped, addressed envelope.

Special Offer on "More Eggs" During This Puzzle Contest

2 One Dollar Pkgs. for \$1.00
5 One Dollar Pkgs. for \$2.00
20 One Dollar Pkgs. for \$5.00
50 One Dollar Pkgs. for \$10.00

TRY THE NEW WAY TO KILL LICE

**NO DUSTING
NO DIPPING**

**NO PAINTING
HANG UP THE BOTTLE**

A hen worried to death with lice can't lay if she wants to, but she eats just the same. You might as well "throw money to the birds," as feed high priced food to lousy chickens. It's a dead loss—don't do it.

Licecil

Kills Lice

Licecil leaves the bottle in powerful evaporating vapors which descend in a misty form, penetrating feathers, cracks, and crevices everywhere. Lice and mites have no lungs. They breathe through the pores of the body. The vapors from Licecil will quickly kill them. They cannot stand the odor of Licecil, and its presence in your hen house will rid you of these pests.

READ THE EVIDENCE

IF YOU have never used Licecil and are inclined to doubt the claims made for it, just consider the letters which appear on this page. These testimonials are but a few of the hundreds that are continually coming in from satisfied customers from all parts of the U. S.

KEEPS ON USING LICECIL

Please find check for \$5 for which send me six bottles of Licecil. I have been using Licecil and find it O. K. This is the third order, which speaks for itself.
J. D. ALLEN, Lynchburg, Va.

IT DOES THE WORK

I have used the three bottles of Licecil according to directions. It did the work all right.
OSCAR THOMPSON,
Long Beach, California.

WANTS MORE

I am sending for some more Licecil. It is the best preparation to rid the place of lice I have ever found. Send as quick as possible, because I am all out now.
JOHN HOLTRAP,
Lynden, Washington.

VERY EFFECTIVE

Received shipment of Licecil, which I have divided with some of my friends. We have found it very effective.
HANS EYERSEN, Silver Creek, N. J.

PLEASED WITH RESULTS

Received Licecil sometime ago and am well pleased with results. Expect to use it continually hereafter.
FRED S. WILLIS,
Wyandotte, Michigan.

LARGER ORDERS

Enclosed find \$5 for six bottles of Licecil. Kindly rush this along and oblige. One of your satisfied customers.
EDWARD LEHR, Escanaba, Michigan.

REORDERS

I enclose \$2.50 for which please send me Licecil. I found Licecil very much better than anything I ever tried.
MRS. JOHN ANDERSON, Buford, Wyo.

KEEPS ON USING IT

Find enclosed money order for Licecil. I was well pleased with results from the other bottle I bought. Have over 200 birds and when I use Licecil lice are a very scarce article with me.
J. E. PLATT, Maywood, Ill.

THE BEST

I bot a bottle of Licecil from you some time ago and found it the best thing of the kind I ever used. Please send me another bottle for the enclosed.
MRS. L. M. JOHNSON,
Plumville, Pennsylvania.

LITTLE WORRY OR WORK

Please send me three bottles of Licecil. Like it very much. With Licecil there is little worry or work. Enclosed find money order for \$2.50 for the three bottles.

BERNARD F. OSTERFIELD, Dayton Ohio.

SEND MORE

Please send me three bottles of Licecil. I received the one bottle ordered recently, and have had splendid results. There is one thing sure, no lice or mites will stay on the chickens with the odor of Licecil about.
L. G. STAYNOS,
Sherman, Texas.

GIVE IT A FAIR TRIAL

If you prefer to fight poultry pests in the old way—it is certainly your privilege to do so. But your own best interest, and the success others are having, will lead you to give Licecil a fair, honest trial at the earliest opportunity.

HOW TO USE LICECIL

Simply put a few drops in the nest and on the roosts, hang the uncovered bottle in coop or hen house. The powerful evaporating vapors which leave the bottle descending in a mist form penetrate cracks, crevices, everywhere. Lice, mites, chiggers, roaches, bed bugs, ants, etc., will be destroyed by Licecil vapors. Will not injure chicks.

MONEY BACK IF IT FAILS.

1 Bottle \$1.00; 3 Bottles \$2.50; 12 Bottles \$9.00—All Prepaid.

Orders Another One

SANDORUS, I11,
April 21, 1919. Dear
Sir: Enclosed find
check for one more
Feather Board to be
sent by Parcel Post
at once, if possible.
I like the other three
I bought of you about
a month ago fine; am
using them in my
Brooder House where
I used to use my
hard coal brooders. I
am using them to
warm the Brooder
House now and put-
ting my Leghorns
under the feathers.

Yours truly, C. M.

Showing "Feather Boards" in a two-compartment feather brooder
Capacity of each compartment, 75 chicks

Are you Using My Feather Brooders?

If not, you are not securing the best possible results. Invest \$5 in one of my Feather Boards with full instructions for making the brooder. Two weeks' use will prove their superiority. Hundreds of my customers are using them with splendid results.

Why Not You?

Book Baby Chicks and Egg Orders NOW

Do not run the risk of placing your order too late. The demand has not been so great in many years, and the only way to insure delivery when wanted is to ORDER NOW.

Choice Foundation Stock

I am now offering, for immediate delivery, yearling hens, pullets, cocks and cockerels, the offspring of my very best layers. No better foundation stock to be had anywhere.

My catalog contains descriptions of my plant by representatives of the leading poultry publications, reports of many of my customers, and also my methods of breeding, care and management. It is fully illustrated and very instructive, and will prove to you that my prices are very reasonable.

Start right, by writing for my instructive catalog today. It has helped others, and it will undoubtedly help you.

JOHN G. POORMAN, Box 100, TINLEY PARK, ILL.

The Schwalge Sectional Incubator

"Four In One" 800-Egg Section

Price
NOW
\$138

**Sold Direct--Maker to User
No Middlemen
No Agents**

Our FOUR IN ONE has gained a reputation as the most practical Incubator for any poultryman—large or small. It is a (BABY) MAMMOTH. Has FOUR independent egg chambers IN ONE and heated with one heater. A hatch can be taken off every week, if desired.

To this FOUR IN ONE additional sections can be added within a few minutes. Can be enlarged to 9,600 egg capacity. Will hatch duck and goose eggs as well as hen eggs. Shipped with legs removed and will easily go through 2-ft. door sideways.

43 Prize Winning Birds

at the recent Chicago Coliseum Poultry Show, had been hatched in SCHWALGE Incubators, proving that the leading poultrymen use the SCHWALGE.

Note these advantages: Each egg chamber is a separate unit, holding 200 eggs—in two egg trays for convenient handling. Trays may be arranged for PEDIGREE HATCHING, if desired. Any chamber not in use may be shut off by means of a stop-off damper, thus saving oil.

Pure Radiation Heat. The heat travels through 4-inch heating tubes, giving a large heating surface and causing a mild heat. Positively no bad air can enter the egg chamber through these tubes. Most Uniform Temperature. The heat to the differ-

ent chambers is controlled before it reaches the chamber (not afterward), which insures the most uniform temperature to all egg chambers. Efficient Ventilating System, independent of heating arrangement and easily regulated. Makes the chicks strong and healthy.

Moisture Generator for dry climates or high altitudes. Water is dropped on hot tube inside the chamber and evaporates.

High-Grade Construction. Sound lumber, 28-gauge, galvanized iron and a liberal amount of fire-proof asbestos is used in the construction of the Schwalge Machine. Packed well to hold the temperature very steady.

Low Price—SAVE 35%

Four single machines of other makes, giving the same capacity, will cost you from \$210 to \$240. Our "Four In One," giving the same capacity with many other advantages, sells for \$138, and gives you the best the market affords in incubators. Price now within the reach of even the smaller poultry raisers. Same quality, same superior efficiency, same big profit-making possibilities. We urge you to fill out coupon and mail at once for full particulars. It will pay you well.

9600-Egg Machine (12 "Four In One" Sections)

We give the most far-reaching guarantee that any responsible firm is able to give on their product.

Mr. Poultryman:

FOR OUR MONTHLY TALK this time let us say that at Hollywood Farm we absolutely do not "kid ourselves" on egg records, nor would we try to fool you. **FACTS TALK** and Hollywood Farm doesn't deal in "hot air." Positively every record we give for egg yield is the **TRUTH** and here we present an example of **OFFICIAL PROOF**, along with the nation-wide winnings listed above by place and date:

FOUR OF THE FIRST FIVE PENS at the Second Western Washington Egg Laying Contest, ending October 31, 1921, were **PURE HOLLYWOOD STRAIN** and these twenty birds in 365 days, under control of the Washington State Agricultural Experiment Station (five birds to each team) laid 1353 eggs, 1337 eggs, 1305 eggs and 1305 eggs, a grand total of 5,300 eggs, or an average of 265 eggs each, counting every bird of the twenty.

AND THEN AGAIN here are sample high individual records made in this same contest by these pure Hollywood Strain birds, under State Government supervision: 313, 302, 301, 291, 289, 288, 284, 820, etc. The year before at this contest birds of Hollywood Strain scored these official records: 312, 293, 291, 284, 279, and 279, etc.

ALSO BEAR IN MIND that these records were made by our strain in **FLOCKS** of 30 to 36 at a State Experiment Station, not in small pens or with the birds cooped singly.

NO SUCH CONTEST record has ever been approached for twenty years by any other breeders.

HOLLYWOOD high egg yield **IS DUE TO BREEDING**. The instinct and power to lay has been **BRED INTO** our strain, reaching back at least **TWENTY YEARS** and "blood will tell." **RIGHT BREEDING** is mainly responsible for such good results. In no other way would it be possible to make such an **UNEQUALED RECORD** and to Hollywood males we must give **THE LION'S SHARE OF CREDIT**—a fact which our breeding record books show conclusively.

PREPOTENT MALES are more than half the battle! This we can safely guarantee. We have males for sale that absolutely will increase the flock average of any group of healthy S. C. White Leghorns in the United States. Mated with the average grade of hens, these Hollywood males **CAN BE RELIED ON** to increase the yield of the pullet progeny twenty-five to fifty eggs **PER BIRD** more than their dams.

Breeding Stock and Layers For Sale

We have for sale the finest lot of Breeding Cocks, Cockerels, Hens, Pullets and Mated Pens ever offered to the American public. All of them are closely related to our contest winners.

HATCHING EGGS by the setting or by the hundred from linebred, pedigreed stock ranging from 200 to upwards of 200 eggs trapped records. Prices reasonable. Special pains taken with long-distance shipments. Despite large hatching capacity, are booked up for the season on baby chicks, the bulk of them going to old customers.

Illustrated, descriptive catalog and price list free to any address on request

HOLLYWOOD POULTRY FARM

HOLLYWOOD, WASH.

And Now-the Jamesway for Chickens

YOU know what the poultry house too often is in winter time—cold as out of doors; drafty; walls and ceiling almost dripping and the litter wet; the air heavy with foul odors; colds, roup and other diseases getting in their deadly work.

No wonder the hens won't lay; no wonder valuable birds are lost; no wonder the owner finds it a discouraging and unprofitable proposition.

The Jamesway System of Ventilation changes all that.

The house is tight and warm; the walls and ceiling, floor and litter dry; the air is always fresh and pure without harmful drafts; the hens comfortable and happy.

The Jamesway System of Ventilation changes the air so rapidly that only 2 to 2½ square feet floor space are needed for each bird—about half that heretofore recommended. The capacity of the house is thus practically doubled and building costs reduced.

Many an old poultry house will accommodate nearly twice the number of hens when Jamesway Ventilation is installed.

Send now for your copy of the Jamesway book giving further information about ventilation, the Jamesway building service and Jamesway Poultry Equipment which saves feed and makes more eggs.

Owen Farms

Matings for 1922

are far and away the best I have ever mated. A wealth of big, rich, typy hens has enabled me to give you more matings of tested breeding females than ever before. The cream of my early mature pullets that have been laying for weeks or months and are absolutely mature complete the finest lot of females, it has been my good fortune to own or to see mated.

My latest winnings on Reds are given in my other advertisement on page 219 of this issue.

Latest Winnings on My Buff Orpingtons

Boston, January 2-6, 1922

1st and 2nd old pen; 1st and 3rd young pen; 4th cock; 2nd and 4th hen; 2nd and 4th cockerel; 1st and 5th pullet and best display in one of the largest and strongest classes ever at Boston show. No Buffs were shown at Chicago.

Utility Qualities of Owen Farms Birds

At Boston Show a man came to me and said, "Delano, you are making a mistake in your advertising in not saying more about the laying qualities of your birds." Naturally, I asked what his experience had been. He then introduced himself as an egg customer of Owen Farms and stated his Owen Farms pullets had outlaid all his other birds in the trap-nests, with his leading Owen Farms pullet laying 278 eggs during the 12 month period. Numerous averages well over 200 eggs have been reported and one Owen Farms Red Pullet has reached 301 eggs in the trap-nest.

1922 Prices

Are the same as last year and all shipping charges are prepaid. My new mating list will be mailed to you in a few days if your name is on file. Eggs from Group I, II, III and IV are \$25.00, \$18.00, \$12.00 and \$6.00 for 15, respectively. I do not mate ordinary utility birds. Every mating is carefully made and has my unequalled blood lines and producing quality behind it. The matings in each group are unequalled at the price. **Book your order early**, and hold the date you wish your order shipped; 25 per cent deposit will insure your eggs going at the time you wish.

Breeding Birds

Strong, sturdy breeding cockerels at \$10.00, \$15.00, \$25.00, \$35.00 or \$50.00 will be unequalled in producing quality. Tell me your wants and let me select a choice cockerel at either price to meet your exact requirements. **Strong, sturdy line-bred** males that have been raised on free range and never had a sick moment in their lives. A few choice cocks and breeding females in each variety. **Line-bred** descendants of generations of winners will help you produce winning youngsters and heavy layers.

Guarantees

On both stock and eggs are given in my mating list. They are fair and equitable. Your absolute satisfaction means my permanent success. Write fully and freely your requirements and will advise you on paper exactly as I would were you sitting beside me at my desk.

AMERICAN POULTRY JOURNAL

Volume 53

Chicago, Ill., February, 1922

No. 2

Question of Admitting Rhode Island Whites

I HAVE been carefully reading American Poultry Journal and especially the articles of Theo. Hewes and Plummer McCullough relative to admitting the Rhode Island Whites to the Standard. What Mr. Hewes says is "Olle Korrekt," but I want to take exceptions to what Mr. McCullough has to offer as an objection to their admission. In the first place he practically denies the Rhode Island Whites the right to exist and have the same chance as other breeds, or varieties of the different breeds had when they were introduced. I have been breeding pure-bred poultry for more than thirty years, the Barrd Rocks continually for about thirty years, and have been winning the blue in some of Pennsylvania's best shows, therefore I ought to know Rock Type.

The Barred were the first Rocks in existence, and consequently the type as fixed by the Standard was made to conform to the breed as a whole, whether Barred, Buff or White. Remember, it is type that makes the breed, and not the color. Color only makes a variety of the breed. Now then, if Mr. McCullough or any one else for that matter, is breeding and showing White Rocks or White Wyandottes for Rhode Island Whites the type is faulty, either in the birds so substituted or in the judge placing the awards.

Mr. McCullough may not be sincere in his objections to their admission and only wants to bring about a discussion of the controversy, which is sure to be of benefit to the breeders of Rhode Island White, and in that respect he is doing a world of good to the breed, as they need more publicity and deserve it.

A point that is well taken is where he says, "Of course the White Rock breeders are not afraid of fair competition with other distinct and independent varieties, or are they afraid that the White Rock will not hold its own." Fair competition is all we want, we do not want to steal either the Rock or Wyandotte type, but we want to breed distinct Rhode Island type and bring the R. I. Whites nearer perfection as the years roll by, the same as White Rock Breeders have done since their favorites were admitted. We then already had Plymouth Rock type in the Barred variety, and why was it necessary to have a white variety? Just because some breeders desired a different color, not different type, and so it is with we Rhode Island White breeders, who prefer a different color from red. Give us a square deal and the Rhode Island Whites will take care of themselves. We ask, but don't fear, fair competition.

I have found the Rose Comb Rhode Island Whites not wanting. I might have selected the White Rocks or the White Wyandottes, but was not so inclined, and there are many others like myself who champion the Rhode Island Whites because they fill the bill, and we will continue to breed them whether they are admitted to the Standard or not.

Paul Whitebread, Pennsylvania.

Breeders and some who are not breeders of Rhode Island Whites rally to their support.—Want this variety recognized as Standard and admitted to Standard of Perfection.

KINDLY let me say a few words in your paper in connection with the article of Dr. Geo. B. Edwards and Plummer McCullough, on page 18 of the January, 1922, number. I was glad to see someone say a good word for the rose comb varieties. Of the eleven Standard varieties of Leghorns, four are rose comb varieties, viz., White, Buff, Light Brown and Dark Brown. Both Black and White Minorcas have rose comb varieties. Anconas also have a popular rose comb variety. So, also, Rhode Island Reds, and the much abused and not yet Standard, Rhode Island Whites.

To my mind the main reason why we should not have Rhode Island Blacks in our Standard just now is because there are no Rhode Island Blacks. Why waste time about something that does not exist? But as far as Black Javas are concerned, it is simply beside the question to drag them into the controversy. They are of no significance as a real practical chicken. While kept from extinction by a few string men, so-called, they amount to nothing as a real up-to-date variety. There may be nothing in particular the matter with them, but they simply are not kept, and that is all there is to it.

There seems to be a lot of talk about Rhode Island Whites and White Plymouth Rocks being too nearly alike in type. Just get out your Standard and compare the illustrations of Rhode Island Reds and Plymouth Rocks and see how far the so-called resemblance in type goes. Mr. McCullough says that "the Rhode Island White has the long back and body, the white color of plumage, making it entirely similar to the White Rock." There is surely something more to breed type than length of back and body, is there not? Does the Rhode Island Red pictured in the Standard look "entirely similar" to the Plymouth Rock there described and illustrated? I think not.

Mr. McCullough says: "It certainly is not fair to White Rock breeders; the principle of the thing is wrong. It is an unfair thing to do." Pray, why should it be so unfair? Rhode Island Whites have been bred for some years without injuring White Plymouth Rocks, have they not? Is admitting them to the Standard of Perfection going to suddenly put the White Plymouth Rock out of business? They have been and are being exhibited at our shows, and will continue to be, will they not? So if we are going to have them in the shows, why not have them in the Standard? Admitting them to the Standard will make no difference, or very little, in their spread and popularity. They are here to stay, and they have been here long enough to show that they will do no harm to White Plymouth Rocks.

I think that when a new variety has supporters, and the requirements for admission are met, it should be recognized by the A. P. A. But I stand against the admission of such varieties as Missouri Fluffs, Chanti- (Continued on page 214)

The Costs in Operating a Poultry Farm

BEFORE attempting to lay before readers of the American Poultry Journal the costs that enter into the running of a commercial poultry business—and for that matter, for any poultry enterprise—I communicated with a number of prominent and successful poultry farms, as well as two agricultural experiment stations, for exact information concerning costs connected with such an undertaking.

I believe that this is a subject of considerable interest to us all. I believe that there is an increasing desire to know how much it really costs to run a poultry plant, and I further believe that many poultrymen do not keep books because they think that it can only be done by an expert, or through a great deal of painstaking work.

In my replies from the poultry farms I received a decided surprise. I found that not one of them was in a position to furnish me with accurate figures upon this subject without going to a great deal of trouble. In other words, they may have had the information tucked away somewhere in their records, but not in such form as to be available for me, or for that matter, for themselves, when wanted. The experiment stations were somewhat more definite, and yet they did not have a really definite table of cost figures to give me. From this I am led to believe, and from the conversations I have had with many poultrymen, coupled with my own experiences and shortcomings, that the chicken business as a rule is not run upon strictly business-like lines as it might be.

Naturally we will admit that one can be successful in the poultry business without being an expert book-keeper. Some of the successful men in the poultry world probably could not tell you how much it cost them to run their business if their life depended upon it. Nor is it necessary to be a double-entry shark or auditor to arrive at a fairly accurate, and certainly satisfactory, answer to our cost problems. That such information can be of great value we will all admit. It is more a matter of getting down to what constitutes poultry costs, and then having some sort of yearly survey, than anything else. The task is by no means insurmountable, and in fact, quite simple, most certainly interesting, and oft-times illuminating. By knowing costs we are in a position to stop many a leak, know where we stand from season to season, and possess a very sure way of avoiding in the future many mistakes of the past. Of course, there are always a fresh batch of mistakes to make, but life would hardly be interesting if we did not have plenty of them to work on, and then have the pleasure of avoiding them thereafter.

Different Conditions on Different Plants.

In discussing this cost question we must first of all remember that each poultry enterprise is in some ways a law unto itself, so far as exact down-to-the-dollar costs are concerned. We can only in an article of this character strike an average, analyze general and specific costs, and trim our sails accordingly. The costs herein taken up are found in every poultry enterprise in greater or less degree, wherever we may be located. We may ignore them, but somewhere, somehow, the bills must be paid, either by the hens, or by the owner, or you are simply sailing your boat without proper rudder and anchor.

For the sake of convenience and brevity, as well as clarity

By **HARRY G. FORSTER**

There are certain inescapable charges against the poultryman's income—What it costs him to hatch and grow a pullet—The costs of housing and feeding a layer—The cost per dozen eggs.

of discussion, let us divide poultry costs into two main groups, calling them as follows:

Group A—General Costs.

1. Feed.
2. Labor.
3. Overhead.
4. Miscellaneous.

Group B—Specific Costs.

1. Cost of Producing Mature Pullets.
2. Cost of Maintaining Layers.
3. Cost of Producing Eggs.

The limits of this article do not permit me to specify concerning broilers, etc., but as they are generally of secondary importance on the typical commercial poultry farm, which we will here discuss, they may be relegated to the subordinate class. We are generally more concerned about the three specific costs under Group B than any others.

Feed Costs.

These every poultryman must face. They consist of scratch grains and mashes for mature fowls, as well as green food of some kind; grit, oyster shell, charcoal, milk, and any other supply that comes directly in this category. Feed is the largest single item on a poultry farm, and therefore of paramount importance. The price, the quality, and the quantity depend upon local conditions, the season of the year, and the individual flock and breed. We must furnish the proper small grains for the chicks, a chick mash for a time, milk whenever possible, green food, etc., all of this sort of more expensive feeds gradually merging into the mature feed ration as the chicks grow large enough to consume it.

Labor Costs.

If you are running a poultry farm entirely "on your own," you will wait until the end of your business year before striking a balance. If you have done well one year, you will find yourself with more money for the work you have furnished than in a poorer year, even though you may have worked harder in the lean than the fat one. If you have a

larger establishment than can be run alone, you will naturally charge the direct labor costs to the fowls. If you find that you can run your plant satisfactorily during the year when there are no chicks to care for, you may properly charge the chicks with the excess labor involved in the spring season, even if the helper has nothing to do with the chicks and is relegated to other less exacting work. Thus an additional outlay in the busy spring season may be charged to the chicks, because if they were absent you would be running the farm yourself. This applies to labor costs, no matter how many men involved.

It is quite impossible and unnecessary to divide labor costs so exactly on a poultry farm as to know which chick should be charged with an extra five minutes devoted to it. The labor costs are generally second in importance on a poultry farm. Of course, if you charge your fowls with a monthly labor cost, which you pay yourself, that is another matter, but if the business is yours, this is generally not done. The business man in for himself takes his profits or losses, as the case may be, at the end of his business year, and calls it his income, his profits, or lack thereof.

Overhead costs are frequently either (Continued on page 204)

"But for life the Universe were nothing; and all that has life requires nourishment." In the case of domesticated animals, such as poultry, they also require protection and care. These three requirements lead to the three major costs of feed, housing and labor.

Early Pullets Are Needed for Winter Eggs

THE greatest profit in commercial egg production lies in the selling of November and December eggs. Market prices of eggs commence to go higher early in the fall, reaching the peak of high prices about Thanksgiving, and very little decrease is noted until southern receipts begin to come into the northern consuming centers, the first gradual decline starting some years as early as January. Therefore, to realize a big profit in the selling of market eggs we must have the pullets commence egg production in the fall and keep it up through November and December particularly. Anyone who fails to get eggs until January misses the best part of the market. This, of course, means that the pullets must be hatched at the proper time so that they will have reached the laying age by October.

Pullets hatched from March 1 to May 15, according to breed, if handled properly throughout the growing season, will arrive at the laying period at just the right time to produce winter eggs, when eggs are the highest in price.

The Right Kind of a House

One of the necessary considerations for winter egg production is proper housing. Every progressive poultryman concedes the fresh air or open front type of house as the proper one. In reality, these types of houses are essential to vigorous, healthy stock, and only healthy stock can be profitable. The all-closed type of house is fast passing out of use. Only on some of the farms of the less progressive poultrymen do we find these disease-breeding coops. I find the fresh air type of house to give far better results than the closed one. The temperature of the building is never so low as to endanger the fowls, nor is the interior damp or illy ventilated. Openings covered with muslin or cheese cloth will allow the entrance of fresh air with no possibility of creating drafts. Such openings will allow ample ventilation and keep the interior nice and dry. The floor and litter will be free from dampness, to a certain degree, and not wet and cold as is the case with the closed type of house.

The cloth covered openings are preferably located in the south side of the poultry house. A frame should be made to fit snugly in the opening, and the cloth should be tacked on and the frame put in place and hinged so it can be opened on warm clear days to admit more air and sunshine. The frame can be opened up entirely in the spring and a frame covered with inch mesh netting substituted. Or, the netting can be placed on the outside of the opening and kept in place the year around.

If Egg Production is to Keep Up.

Health and production in the winter flock depends largely upon three things: sunshine, fresh air and exercise.

Exercise increases the circulation of blood in the body of the bird. This means that all parts of the body will be properly nourished and that the strength and vigor of the bird will be built up and maintained. No bird can produce eggs unless there is strength and vitality to stand the strain of egg production.

Exercise is one of the most powerful natural enemies of disease. The greater part of the enormous losses annually attributed to poultry disease is due to the weakened condition in which the fowls have become during the winter. A weak, sluggish circulation does not fight off disease. The body of a normal, healthy bird has the power to withstand the ravages of disease to a certain extent. If the flock is forced to exercise vigorously during the day, and especially if the birds are kept in the sunshine, and where they can breathe fresh air, disease germs will have a hard fight to work their destructive way into the flock. Prevention is surely worth vastly more than cure.

Exercise increases feed consumption. At first thought this might be taken as an added expense, rather than an added value but an abundance of this feed is required to make eggs. Birds

By **CHARLES F. STEM**

Pullets that do not start to lay until the first of the year are too late—Peak prices for fresh eggs are reached in November and December—Pullets should be ready to lay by October 15.

that scratch busily from morning till night develop good appetites. Their digestive systems work smoothly and are able to take care of great quantities of feed. In order to be a heavy layer a hen must be a heavy eater. Remember that and stimulate food consumption and digestion by means of exercise. hrow the scratch feed in an 8-inch deep clean straw litter.

Birds kept in the poultry house during the winter are placed under trying conditions, and it is necessary for the poultryman to induce exercise by practical methods at hand.

There is no more satisfactory way in which to promote vigorous exercise than by getting the hens interested in something that will keep them busy. The only appeal that can be made to them is through their feed. Scatter the grain in deep litter—8 or 10 inches deep, composed of dry oat or wheat straw—see that the straw is clean through and dry enough to rattle and be sure that the grain sifts down through the straw and does not lie on top, as is the case with a damp litter. If the fowls are allowed to obtain the scratch grain without any effort on their part, they will clean it up quickly and hop up on the perch and quietly await the next meal. A plan that has given satisfactory results to a large number of poultrymen throughout the country, is to scatter a mixture of grains in the litter at night or early morning. As soon as light comes and the birds hop from the perches they start at once to hunt for breakfast. This keeps them busy during the greater part of the morning. Late in the afternoon another meal of grain is fed. This forces the birds to work hard before returning to the perches, thus warming themselves thoroughly on wintry afternoons, and preparing themselves for the long night.

A bird should return to the perch with a full crop, as the body continues to work while the birds sleep. With the scratch feed and the laying mash (water and green feed) gathered during the day, the hen should obtain sufficient feed to keep in good health and have a surplus to convert into eggs. Always bear in mind that oyster shells make the egg shells, and grit is the hens' teeth.

Green Food During the Winter.

For many years the writer has fed mangel beets with very satisfactory results. The large Red Mammoth variety is preferred on account of the size. The beets may be raised cheaply, and a large yield an acre can be realized. The birds relish them, and eat them ravenously. Birds that have received them have been in excellent physical condition throughout the winter season, and have produced eggs regularly. Cut the beet in the middle, longitudinally, and hang it on a spike driven into the wall about 15 inches from the floor. The hens are forced to jump at the beet in order to get it, and the continual jumping and picking affords a fine source of exercise. Cabbage may also be used. Suspend them by the roots from the upper part of the house, hanging them about 20 inches from the floor.

Animal Food for Winter Eggs.

When the fowl is allowed to roam at will during the spring and summer, a large amount of its food consists of animal food, such as worms, bugs and flies. This, added to the green food and grain, also seeds, gathered by the fowl gives a balanced ration ideal for egg production. In order to bring these conditions about in the winter, it is necessary to supply these food elements in the form of Beef Scrap or Buttermilk.

Buttermilk as a poultry ration and substitute for meat scrap is unexcelled. Being high in protein it gives the fowls the food required to take the place of bugs and worms. As a health tonic there is none better. It aids digestion and after being fed a short time, the healthful condition will be noted by the red heads and faces of the flock.

The fowls should have a supply of good fresh water at all times. It should be kept in a cool. (Continued on page 216.)

Securing Good Growth in the Heavy Breeds

THE readers of American Poultry Journal will undoubtedly be interested in a little further or inside information concerning the growing of an Orpington cockerel to the weight of 10 lbs. in six months as reported briefly in the November issue, where we stated that he was not forced for great growth, but had just ordinary good care as one among a flock of youngsters. There are some fundamental reasons, however, which are by no means obscure, that account for such splendid development during a period of a few months, for this same bird had attained the weight of 5 lbs. and 5 ozs. at the end of his first 3 months. And it may be of interest to state here also, that two other cockerels of the same variety and of the same hatch, grew up with this bird, both attaining the weight of 9 lbs. when 6 months old. None of them were fed or forced in any way to attain these weights.

Breed Characteristics

We must remember that two breed characteristics of the Orpingtons are to grow big and to grow fast under normal and proper conditions of care and environment. Orpingtons are the largest clean-legged variety we have today. The Black Orpingtons that have been bred for bone and not merely for excessive profusion and length of feather, are the largest of the Orpington family, and the first reason we advance why these cockerels attained such fine growth is that they were of Black Orpington stock.

Inherent Stamina and Virility.

These cockerels possessed an inherent vigor which was born in them. They were hatched from eggs laid by hens and not by pullets. These hens had not laid to any extent during the winter. They were strong breeders and were able to transmit their inherent strength to their offspring. Their vitality had not become exhausted by reason of prolonged egg production. Moreover, these cockerels were sired by a vigorous cock bird and not an immature cockerel. Perhaps results would have been just as favorable if a vigorous, well developed cockerel had been used, and we attribute the transmission of inherent vigor to the female line rather than to the male line. But these particular birds had in their favor for rapid growth a strong parentage from both the male and female line. One of the dominant factors in their rapid growth and fine development was the inheritance of a great innate vigor from strong breeding stock.

Early Incubation.

There is a right time for chicks to be hatched in the early spring, when they will come on and grow and develop wondrously. That time, according to our observation in our climate of Pennsylvania, is around March 20. At that time they will doubtless require some inside brooding, but when the weather permits them to be placed outside, preferably with hens, they have become large enough and strong enough to take up foraging in earnest, and will grow by leaps and bounds. Another thing, early chicks are not as a rule crowded or annoyed by a large number of chicks in the same brood or range, as is often the case with later chicks, which

By Dr. GEO. B. EDWARDS

Hatching and feeding of a cockerel that made 10 lbs. in six months.—Nothing is more discouraging than poor development.—Importance of the breeding stock.

condition is not favorable for the greatest growth and development. With the average poultry raiser among fanciers, early chicks hatched in late March are few in number as compared with those hatched in April and May, which condition of scarcity in numbers greatly favors their rapid development, because of an independence and freedom and huge appetite that a few early youngsters always seem to be possessed with. We call attention to the fact that the particular cockerel we are considering was hatched March 23, 1921, and he was well born under a hen and was also brooded well under a hen. He grew well under most favorable conditions as an early hatched and bondage-free youngster. Indeed, under such conditions he developed an independence, truly American, that gave him a jurisdiction over his fellows, as his heart grew big and his lungs went on expanding. Today this bird has a crow like the blast of a trumpet, which is long and loud, deep and strong.

Feeding and Care

We lay no claim to being an adept in the science of feeding poultry. We have no set rules by which we abide. Our system of feeding is by no means a rigid one. And this because we do not raise chickens in great numbers. We live among our birds as time and opportunity permit, preferring to serve them with regular meals, rather than store feed by them all the time. We have been a fancier from our youth, and have always realized the keenest pleasure in rearing and handling thoroughbred poultry, and they have been profitable to us as well as pleasurable. We feed our baby chicks oat flakes in the early stages of their life, and continue the oat feeding indefinitely, in conjunction with other grains and mash feeding. We like the oat flake better than the pin head oats, and the little

Buff Orpington Hens and their laying nests.

chicks like it better also.

After 10 days or two weeks we begin feeding mash, and thereafter until maturity we try to make the mash feeding alternate with grain feeding, finding that poultry at all ages thrive best on mash and grain rather than on mash or grain alone. Any good laying mash will be found satisfactory for growing chicks, for a mash that will cause hens to lay well will also cause chicks to grow well, only we prefer in a growing mash a larger percentage of ground oats than would be required in a laying mash. We have always fed mash in a moist state both to grown and growing stock.

During the last year we have had opportunity of getting plenty of skim milk, which we allow to sour and then mix with the mash. Sour milk is a wonderful food for fowls of all stages. If you will use sour milk with your mash and use it continuously, you can dispense with your meat scrap and alfalfa.

We have always been able to grow big Orpingtons, and we have always made it a rule to use all the oats, in various forms, we could get the birds to eat. Sprouted oats have been found valuable, particularly where other forms of green food are not available. Young stock specially are ravenously fond of them, but they should be fed when sprouts are about an inch and a half long. (Continued on page 228)

Enormous Entry of Supreme Quality at Boston

THE doors of Mechanics Building, Boston, swung open to the public on Monday, New Year's holiday. As far as possible the birds had been received and cooped on the preceding Saturday. As a part of the plan which provided for the early start, the exhibition was closed Friday night, January 6, 1922, and the crates with their return labels addressed were filled for their homeward trip Saturday morning. Boston express agents have never provided the poultry show with Sunday service, and the exhibits, heretofore, have always had to remain penned from the time the show closed Saturday night until Monday morning. Friday night closing this year allowed an early return.

The attendance at the Boston show is always large, and the attendance at the event this year was splendid as usual. Basic industries are picking up in New England. Boston liquidated early and is now coming back. The wheels in the woolen mills are spinning, some of the cotton mills are running day and night, and shoe manufacturing shows signs of revival, with hides up from 8c to 16c a lb. This condition gives optimism to business. The manufacturers' agents who had displays in the Boston show reported unusually good business in incubators, brooders, feed, and all kinds of poultry appliances and equipment.

New England poultrymen have had two very good years. They were hit so hard during the war, however, that they have been cautious. Geo. Howland of Rhode Island explained that war time condition when he remarked: "Thirty years ago, when feed was very cheap, I used to sell to my Newport trade a pair of chickens that weighed 5 lbs., and the price for that 5-lb. pair was \$2 to \$2.25. When the war came on and feed went away up in price I still got 40 cents a pound for my poultry." The rise in the price of poultry lagged behind the rise in the price of feed; in fact, feed reached its crest in the price wave and had begun to decline before poultry prices reached their peak. It was not unusual last spring for a 9-lb. capon to bring 90 cents a pound in the Boston market. Feed was already down in price. Such a condition was never known before. During the Boston show one grower stated that he was then receiving 45 cents alive for heavy stock, and that at the present price of feed the sale of one 9-lb. roaster paid the cost of growing it and two others like it.

Practical Value of the Show.

The quality of New England dressed poultry is far from what it used to be. This was true of the carcasses on display at the Boston show, and a trip to Faneuil Hall market disclosed only ordinary quality hanging in the butcher's stalls. Some of the old growers have died or retired; others have not yet gotten back. New men, however, are coming into the business. We remarked to Secretary Atherton of the Boston show, that we had never seen so many new faces before in Boston. He replied that there was no question but what there were more new exhibitors this year than ever before.

The Boston show is not removed from the practical poul-

By FRANK L. PLATT

Over 4,000 head of poultry in competition--Heavy attendance--New England poultry growers making money--Rhode Island Red Club brings out entry of 446 S. C. Reds—Big bantam show.

try industry of New England. Geo. Howland, above quoted, is a practical poultryman, growing carcasses for human consumption. For twenty years he has taken his annual week's vacation by attending the Boston show. He remarked that he gets many valuable points from lectures which are a part of the show's big educational program. Moreover, he said that he gets inspira-

tion from the fine White Wyandottes that are shown in the exhibition class; they are his favorite breed; and from his viewpoint, the point of view of a practical New England grower, he felt that the birds at Boston were most meritorious. He gave it as his aim that he would like to breed birds that closely approached the type and quality of the winners at Boston. "They are not short bodied, 'fancy' chickens such as won at Boston ten years ago," said he. "They are wide standing birds that feed solid in the hand," a characteristic of New England poultry.

The boys' and girls' clubs of Massachusetts exhibited about 500 birds in special classes that had been provided for them. The members grow and exhibit their own birds, which are judged according to Standard exhibi-

tion values. The exhibit is cooped together and it is not only pleasing to walk through the aisles and see the satisfactory quality that the boys and girls enter, but it is gratifying to know that the entries may be judged by the same Standard of quality that decides the prizes on the main floor because the poultry educators of New England know that that Standard represents the best we have in domesticated fowls.

Boston staged this year what may be appropriately called a "chicken" show.

There was a rather small entry of turkeys and waterfowl. Pigeons and rabbits showed a falling off. Boston no longer has a cat or gold fish show. It is a chicken show. The heavy breeds predominate, but Reds are gaining some on New England farms because they are "good layers." Leghorns are gaining a little, and from the class of Anconas it would appear that there was some advancement in their general popularity. It remains true, nevertheless, that a good carcass is still the dominating thought of the New England poultry man. One sees remarkable size in many of the Reds; he hears Buff Wyandotte and Columbian Wyandotte men talking size; he walks by a coop in which there is a Columbian Wyandotte hen and a fine brown-shelled egg and hears that old fancier, Frank Davey, remark: "An egg like that increases the value of that hen."

Secretary Atherton was proud of the chicken show. The exhibition as a whole showed an increase of 300, and the increase was all in chickens. The remarkable part of it was that Mr. Atherton "did not solicit a single entry." He made this statement during the Boston banquet.

Two banquets are annually given to visiting poultrymen at the expense of the Boston show. One is to the veteran fanciers. The other is to the exhibitors and judges. At the latter, 268 plates were served. Aside from the foolishness at the banquet, there was some good solid talk. The trend of the speeches very plainly indicated (Continued on page 252)

Personal Qualifications of the Poultryman

ACAREFUL observer at one of the recent large city poultry shows made the statement that the people who attended the show could be divided into two classes—those who were in the poultry business and those who would like to be. Magazine agents and others who have an opportunity to talk with poultry show visitors state that a considerable proportion of the people who attended poultry shows are either not keeping chickens at all or else have only a small back yard flock, while great numbers are looking forward to the time when they fondly hope to have a poultry establishment of pretentious size and prodigious profitability.

There are thousands of people, particularly in the cities and towns, who long for a chance to establish themselves in some independent occupation and are obsessed with the belief that if they could acquire a poultry farm their way would be paved to an independent existence of ease and luxury. For such people the attacks of hen fever are of yearly occurrence, following closely upon the exposure to germs of this malady at the winter poultry shows.

A great majority of the people who at some time in their lives are stricken with a great yearning to seek their fortune in the poultry business are prevented by force of circumstances from ever making more than a feeble start. On the other hand there are a considerable number each year who actually launch out into the poultry business as a prospective means of livelihood, and the results of their amateur endeavors are extremely interesting to follow. No reliable statistics are available to show what per cent of those who put their entire reliance upon poultry as a means of support make a success of the venture and how many end in miserable failure, but observation indicates that there are a considerable number who do succeed and a very large number who fail.

Much has been written about the amount of land, the kind of stock, the number of hens, the type of houses, and the rations which should be fed in order to make a poultry venture succeed, but not a great deal has been said about the factor which is most important in any business and is of particular importance in the poultry business; namely, the qualifications of the individual who is undertaking the project.

Success Depends Upon the Man.

Numerous inquiries reach the writer of this article regarding the most profitable breed of fowls, the proper number of hens for a one-man plant, the approximate cost of buildings and the various other questions which are necessarily considered in starting a poultry farm, but very seldom are any questions asked with regard to the necessary qualifications for an individual to succeed in poultry keeping. This situation is probably a tribute to the unbounded confidence of the average American and is also a reflection of the popular belief that anyone can succeed with poultry. There is a wide-spread belief that poultry keeping is an occupation at which the lame, the halt and the blind, the old men, the invalids, the women and children can make a good competence with a very small amount of labor.

It is true that the work of poultry keeping does not require a great amount of physical strength and there are numerous examples of people who have made a success with poultry keeping who could not have successfully carried on other kinds of work that require greater physical exertion. On the other hand there are certain requirements for success in the poultry business which are of fully as much importance as physical strength and which are not possessed to the same degree by all individuals.

Among the characteristics needed by one who would make a living from hens are pep, patience and perseverance. It is easy enough to be enthusiastic about poultry keeping when the chicks are first hatched, when the pullets begin to lay their first eggs, or while the birds are being gotten ready for

By T. S. TOWNSLEY

Many beginners are interested in cost of production.—They should not overlook the important matter of taking stock of their own qualifications.—Success depends on the Man.

the show; but success in the poultry business is a 365 day a year undertaking, and those who really succeeded must have sufficient pep to prolong their enthusiasm carry on the daily routine of feeding the birds, carrying water, cleaning the houses, gathering the eggs, treating diseases, keeping down parasites, hatching and brooding the chicks and burying the dead. Many

a failure in the poultry business is directly traceable to loss of pep. One such instance recently came to my attention in the case of a man who became tremendously enthused a year ago at one of the large poultry shows over the possibilities of the profits from poultry and under the spell of his enthusiasm let the contract for a poultry house large enough to house 1,000 hens, at a cost of more than \$4,000. This man had no chickens at the time the house was built and by the time the hatching season came on, his enthusiasm had subsided to such a low degree that he went to a poultry commission merchant to buy his eggs for hatching. As a result of his loss of pep his \$4,000 chicken house is occupied today by about 200 mongrel hens and a "for sale" sign hangs on the door.

While the poultry business is a billion dollar industry in the aggregate, it is made up of small units, and the income from many farm flocks is regular but not impressive to the farmer. To the man who has been accustomed to a weekly or monthly salary check or to the farmer who is accustomed to receive a large check from the sale of his year's production of wheat, corn, hogs or cattle, the income represented by a few dozen eggs, marketed two or three times a week, is likely to appear insignificant, and patience of a very high order is required to enable the beginner in poultry keeping to perform day after day the routine tasks connected with handling the flock and be content with the apparently small returns. Many a man goes into the poultry business with his aim set entirely too high. There is much talk of one man being able to take care of 1,000 hens, and when we figure an annual profit of from \$2 to \$3 per bird, this looks like an attractive income. However, the big hitch commonly comes in getting the 1,000 hens. Most amateurs who jump into the poultry business in a big way at the beginning make a flat failure because they find too many details that have not been provided for. On the other hand, the individual who starts in a small way must have patience of a very high order if he can be content during the three or four years necessary to build a flock up to the desired 1,000 hen unit.

A 500 Hen Flock.

There are many examples of people who have started in the poultry business without much previous experience and by starting modestly and increasing gradually each year have finally come to enjoy a satisfactory income. One such case is that of a Missouri farmer who retired from active farming at about 60 years of age and decided to spend his time raising chickens. The first year he started with a small flock which he raised successfully and which paid him a profit of more than \$2 per hen. The next year he doubled his flock and a little more than doubled his gross profits. At the end of five years he had 530 hens and realized a profit of \$105 a month above feed cost. This man says that if he had started with a flock of 500 birds he would have made many costly mistakes and probably would not have been able to "carry through." As it is he has a comfortable income and is planning on increasing the size of his flock.

In the normal course of things poultry operations are fairly well regulated and results can be counted with reasonable certainty. The place where the hen eats, sleeps and scratches is regulated, what, when, where she eats and drinks is controlled, and her owner regulates the disposal of her products and the care of her progeny. However, there are often unlooked for complications which (Continued on page 210)

The Male at the Head of the Breeding Pen

INEVITABLY must the poultry raiser admit the very great importance of the poultry breeder in the continuation and development of our American poultry business. The fundamental element to a business success in poultry culture is the bird. To the conscientious, skillful, and untiring efforts of our better poultry breeders in this Country today do we owe the remarkable beauty and usefulness of our established breeds and varieties of fowls. Poultry breeders have produced for us fowls that meet the varied requirements of an industry practised in all parts of our land and by all classes and types of people. The decided trend of the development of poultry keeping in the United States is toward an increased quality of poultry kept and raised. Each year marks a more or less certain advance in the general quality of fowls maintained by our poultry industry as a whole. The sign is healthy. The trend is toward a higher plane. Purebred poultry is supplanting the mongrel, and Standard-bred stock is populating the profit-making poultry yards.

Getting a start with good fowls is a step well-begun, but the poultry raiser in doing this much begins the larger task of maintaining and developing his flocks. This is to be done largely by the careful handling and selection of the breeding pens in the spring time of the year. February is again with us, and from these weeks on the breeding pens should focus the attention of the poultrymen upon themselves. Much is said and written concerning the care and management of the hens that have been selected and placed into the breeding pens. There is sometimes a tendency to overlook the male birds that after all are so important a part of the season's mating. It is said, you know, that the sire is half the herd. Isn't it true in the poultry flock, as well?

I would call the attention of poultry keepers to the care and management and handling of the cockerels and cock birds that are to be depended upon to sire the pullets and cockerels for another season. Whether your matings be few or many, your flocks large or small, your poultry venture a commercial farm or a backyard flock, give due consideration to the cockerels this month and from now on through the season of hatching eggs and baby chicks.

Peppy Cockerels.

In some instances the matings have already been made, and yet in many of those it is not yet too late to make a few shifts, if cockerels have been selected that do not measure up to requirements. In February the poultryman should carefully and slowly look over the cockerels he is going to use. If they are already running with the hens look them over anyway. "Peppy" cockerels are an absolute necessity at the beginning of the mating season. Males must be used that not only show desirable traits to be passed on to the next generation, but they must be strong enough to stand up under the mating season. In a word what are the characteristics that good breeding cockerels should possess, as they are handled and examined during this winter month? Pick up your cockerels and see how closely they may measure up to these points!

SIZE—Modified by the nature of the breed handled, of course, but an essential element within any breed. Coarseness is to be avoided, but it is a mistake to use too small a cockerel, one that is lacking in bone and form where he should possess those attributes.

WELL-PROPORTIONED—The Fancier may call it sym-

By W. C. THOMPSON

The breeding yard is the foundation for the future of the poultry flock—Importance of selecting sound males for stock purposes—Keeping the breeding males fit.

metry. But there is a certain balance between body parts that gives a cockerel a well-proportioned carriage and bearing. Legginess, or extreme ranginess, for most breeds, is not associated with strength and vigor, or with economic usefulness. One must know his breed and should select with due regard for Standard requirements for it.

GOOD FLESH—There is nothing more disastrous to results in the breeding pen than to select cockerels that are thin and out of flesh. They need flesh for strength and pep. Their food should have supplied them with a considerable surplus of flesh before February came around, but in case they are too thin now, feed 'em up.

FORM—Avoid the deformed, short-legged, or long-legged, lanky, scrawny, crow-beaked, awkward, knock-kneed, bow-legged, pigeon-toed, shallow-breasted individual. Be sure your cockerel is firm on his feet, prominent in breast, stylish in carriage, and wide, deep and roomy in body.

GOOD HEAD PARTS—The writer is coming more and more to the opinion that the head parts of a fowl are a very fair indication of his worth. The well-developed, strong, vigorous, healthy cockerel has a deep head, broad, room for brains (chickens have 'em, too), with strong, stout beak, prominent, bright eye, good-sized wattles and ear-lobes, and a comb that is bright red, full of blood, of fair size and development, and well-formed. When a cockerel has strength in his body, his blood stream is in good circulation and consequently his head parts are bright and full.

WELL-COLORED—If at all possible, be sure that the cockerel you put in the mating is as well-colored as you can secure, for he will effect the color of all his pullets and cockerels, you know. This is the day when the appearance of poultry is a selling point.

Healthy Cockerels.

Make it a daily practice to watch the cockerels, especially in the pens where there are more than two cockerels. Many cockerels have started out the season in a good shape when placed in mass matings, but have been worthless contributions to the breeding pens, simply because they were not properly watched day by day, and consequently properly cared for.

Very many times after cockerels have been placed in new pens with strange hens and other cockerels perhaps some of them, in themselves good strong individuals, become timid and afraid. Many a good cockerel has been lost because it

was not immediately ascertained that he was not mixing with the crowd. This usually means that cockerels, thus timid, do not have enough food. They are frightened back at feeding time, and spend most of their time on the perches and in out of the way corners. These are not necessarily poor cockerels. Watch the cockerels, and be sure that each one gets a proper food supply. I have seen a single cockerel placed in with strange females held back from feeding by the hens. One must be very sure that the breeding cockerels are getting their full share of the eats. It may mean the catching up and separate feeding of the cockerels for a day or so. It may be that re-arranging of the assignments will be necessary.

Ill-fed cockerels will not long be efficient breeders. Their continued health is largely determined by the food they get. Keep an eye on each cockerel, and examine him from time to time to see if he is continuing in good flesh. I have sometimes found it necessary to give the cockerels a special moist mash feeding during February and March in order to keep them in good trim.

Well finished Barred Plymouth Rock cockerel of good form. A type that is strong, vigorous, robust, healthy and sound.

Editorial

Beauty in a Fowl

SHAKESPEARE once remarked that "the apparel oft proclaims the man." How much more it is true that the covering of a fowl bespeaks its merit, for, unlike the man, it cannot seek expression in the selection of its clothes, rather its covering proceeds from the actual construction of that body to which it gives outward expression. If the body is weak, poorly nourished, under developed, the plumage will be short, or it will not lay smooth and sleek, or white tips and purple bars will show in it. Bunyan must have known something about the plumage of a fowl when he wrote in *Pilgrim's Progress*, "They'll be fine feathers that make a fine bird."

The man who ridicules the beautiful Standard exhibition bird as "fuss and feathers" has yet to learn that fine feathers do make fine birds, and that the beauty of the plumage is the externalization of a full inheritance and a full development down to the finest filament of the feather. It is an externalization of a harmonious and perfectly running organism.

Beauty without usefulness is a delusion. Nature never stops merely with beauty. As we look about in the fields, the woods, the canopy of sky, we perceive also that nature does not stop merely at usefulness. It appears that she has never considered her work complete until she has carried the practical to some final outcome of beauty.

Critics of the breeds of poultry are too apt to regard beauty as some superficial thing. Many people say that beauty is only "skin deep," not realizing that beauty is the most perfect outward expression of all that lies deepest in the fundamental laws of being. Plato did not elevate to the highest place a thing that was superficial, yet this great thinker of old gave to beauty one of the first places in the system of the universe.

Those who have grown chickens and know the ill effects on the plumage of weak parent stock, of parasites, of crowding, of underfeeding, look upon a beautiful plumage not as a superficial thing but as the outward apparel of a body so fully endowed and so completely developed that there is plainly indicated the presence of reserves of strength and prepotency behind it. Perhaps this explains why one breeder, standing before the cage of the beautifully plumaged 1st prize Single Comb Rhode Island Red cockerel at Boston, remarked: "I would gladly pay \$500 for this bird"; and another breeder, later in the week, said: "I would like to get one of those males; in fact, I wouldn't hesitate to pay \$300 for the 1st cockerel."

The Boys and Girls

Members of the Boys and Girls Clubs of Massachusetts exhibited over five hundred specimens of chickens at the Boston Poultry Show. It was a highly creditable exhibition of good Standardbred poultry.

Many of these boys and girls are potential poultry breeders, who in future years will contribute to the glory of purebred poultry in New England, for they are being trained to an understanding and appreciation of breed type and breed quality. That is more than getting an egg and counting it.

No purebred live stock business is wholly utility. If it were, there would be, for instance, no need for dairy shows. Just milk the cows and weigh the milk and be done with it!

The poultry business is fundamentally a breeding business. It will ever so remain. The interest of the educators of Massachusetts in the breeding phase of the business, and their policy of inculcating in the minds of boys and girls the Standards of quality that have been established by the best breeders, is one of the most commendable and far-reaching things done to date in poultry educational work.

There was an impressive occurrence at the Boston Show when Miss Margorie F. Keating, teacher in the Dorchester schools, brought her Poultry Club of forty-eight boys and girls to see the exhibition. They are third grade pupils who have found in a beautiful pen of Silver Campine chickens a new interest in nature. In speaking of the organization of this club, Miss Keating said:

"It suddenly dawned on me one evening that our schoolyard could be put to very good use in erecting a small chicken house and getting the children interested in the raising of poultry. The next morning I told my plan to my third grade and it met with unexpected enthusiasm and delight. We ordered a 6x8-foot house, and the children are taking turns in feeding and watering the birds, cleaning the house and gathering the eggs, and after I get them started I hope to be able to have the older boys care for the birds on Saturday and Sunday as well as on holidays."

There is fun in this work with the boys and girls, as a breeder in Idaho, William Scott Doig, wrote: "I want to say that I have gotten more real enjoyment out of a junior poultry club I started last spring than anything I ever started." J. De Ver Rogers, New York State, provided a number of boys in his country last year with eggs for hatching from his best matings of Rhode Island Reds, and the interest of the boys was so responsive and impelling that he went a step further and "offered to try and get any kind of eggs they wanted from other breeders."

All of the eggs do not hatch. The poultry in Miss Keating's little school-yard poultry house may succumb to disease. Such actualities may appeal to her as trials and disappointments. But should they? Is it not through just such experiences that the boys and girls will learn that effect follows cause, and is not that the great lesson for youth to learn? At Cornell University the Professor of poultry husbandry gives to the management of each student a separate pen of birds. If some cold night some one student side-steps duty and fails to go to the poultry plant and close the curtain to his pen, frozen combs appear. They are the effect; and as the weeks and months drag on, and he sees his birds day after day, it is indelibly stamped upon his mind that he is the cause.

The urchin of the city street soon learns to side-step effect by lying. He disowns the cause. The country boy is early taught the relation of cause to effect. If he skips the corner of the field, failing to plant seed in it, the effect is that no crop grows there, and the cause cannot be denied. Nature tells no lies. Nature is childhood's perfect teacher, transforming education from a mechanical grind to a living process. "He is great who is what he is from nature."

Poultry Judges

The National S. C. White Leghorn Club held its annual meet at the Milwaukee show. In making a report of that meet, A. F. Rolf, secretary of the Club, commented on the judging, and it is such a good description of what may be expected from a judge who knows the law and applies it conscientiously, that we are pleased to print the comment as follows:

"With red-hot competition; with the necessity of 'splitting hairs' to reach many decisions; with the knowledge that no classes have been so severely criticized as the White Leghorn classes at the biggest shows in the country during the past two seasons—but with a sound knowledge of what constitutes a STANDARD White Leghorn, and with faith in his ability to determine which exhibits most clearly approached that ideal—thus did the judge face the White Leghorn classes.

"He took his time. He handled, and re-handled every bird. He took a real interest in seeing that every specimen had a full opportunity to show its real quality. And, when he reached the point where most judges would have been ready to announce their decision, this judge had just made a good start. A string of eight single coops were laid out, in perfect light, and all under uniform conditions. The leading aspirants were placed in these eight coops, where all could be observed at once, and they were thoroughly studied, one against

the other. And, when the judge finally announced his first and second choices, not only did he know WHY, but so did every spectator who had been interested enough to stand by and watch.

"As first and second were decided and returned to their coops, two more were brought up on dress parade, and in this way, there were the eight most likely candidates for every ribbon right before the judge's eyes at the time the award was made. The only place where one could vary from their entire thirty placings was in the case of one hen, and she failed absolutely to show her quality on the day of judging. Had the visitors who could not understand this hen being left out of the ribbons seen her when the awards were placed, they would have heartily approved the awards.

"After a thorough analysis of every bird in the class, without fear or favor, the judge placed the awards where he thought the quality of the birds justified."

Perhaps we were especially impressed with the above words of Mr. Rolf on the White Leghorn judging at Milwaukee, because of a little incident in the White Leghorn aisle. We were talking to Fred Smith of Oak Dale Farm when another exhibitor of White Leghorns came along, and Mr. Smith introduced us. In the course of the conversation that ensued, the exhibitor said: "I have a very nice pullet here. The judge of the White Leghorn class told me that he would have placed her if it had not been that her tail had been bent down. One of the other judges here, a friend of mine, had attempted to do me a favor by straightening out the tail of the pullet. Instead of helping her out, he put her out of the running.

Eugene Smith who judged that class received his post graduate course in the Garden, and there received his degree when Dan Young handed him the keys to his cages, saying: "Go through my string, handle the birds, and if you find a bent down feather I will pay you a thousand dollars."

The judge who tries to ingratiate himself with exhibitors by tipping them off to little tricks, hurts himself by lowering his own dignity. Exhibitors lose respect for such a judge. No judge should forget the dignity of his position or the prestige of the industry he represents.

We wish that every judge of purebred poultry in America might have heard the speech that L. D. Howell delivered at the Boston show banquet. Mr. Howell is Judge of the Surrogate Court, Nassau County, New York. He went to Boston to renew friendships and see the supreme quality that characterizes so many classes at the Boston show. Said Mr. Howell in his talk:

"Poultrymen are honorable. You can remit to them \$5 or \$100 and they will send you the best bird they can for the money. They try to be square. If the bird doesn't satisfy, they will try again by sending another to take its place.

"Poultry judges try to give a square deal. They are instinctively honest. Drevenstedt, a judge and breeder from 1881 to 1921, a period of forty years; and Wid Card, who has just told us that he has this year rounded out a half-century as a breeder—can you tell me that these men could have stayed so long in the business unless they had honorable motives? I have heard Drevenstedt and Card criticised on their judgment, but never have I heard them charged with dishonesty or crookedness.

"Breeders in selling and judges in judging have different opinions. Their opinion may differ from mine. But it's a different viewpoint, that is all. Tell me if men could stay in any business so long if they were not honest. I think that the inherent tendency in poultry is honesty.

"Judges of chickens, like judges in courts, fail when they fail to be human. To be human carries with it what sometimes strikes a man as a terrible responsibility. The poultry judge gets both sides of the question when he gets two chickens before him. Then the responsibility brings out the manhood that is in him.

"The man who would be a judge of poultry must first find out what is right, and then in actual practice he must apply the law as he sees the right. He needs backbone to carry out what is right. It is not difficult to find the right. But the will to apply the right is necessary.

"In the law we publish a code of practice of the law. Now, if lawyers trained in the evasion of the law should publish a book on how to evade the law, they would be ostracised by the profession. The poultry judge should never say anything that reflects on him or his industry. Then he can never be charged with wrong motives, and at most, stupidity is all that can be said against him."

There is a little sermon by a lawyer and judge trained to respect the majesty of the law. To him the practice of the law is an exalted calling. As a lawyer he has accepted the precepts in the legal code of the Romans, as rules of guidance in life. That legal code named three precepts: "to live honorably; not to injure one's neighbor; to give each man his due."

The Bar which is composed of poultry judges, like the Bar of a city's courts, counts among its members men who, by

their honesty, personal example and wholesome influence, are elevating and are maintaining the traditions of an honorable profession. They approach their work with reverence, aware of their responsibility. They do not break down tails for some ambitious client; they do not suspend a sentence of disqualification because they do not believe that a stub should throw out so good a bird; they know the right and they have the will to apply the right. It is not for them to make the law. It is for them to apply the law. Neither is it proper for a judge to specialize in how to evade the law.

A judge should take his work seriously. Snap judgment or loose comment on a bird may put a breeder on the wrong track for several years. It is along these lines that President Rigg, in the following communication, counsels judges in the matter of duty and responsibility:

"The importance of capable and honest selection of prize fowls in the show room cannot be over-estimated. It is of such vital importance to the interest of the fancier and exhibitor, and to the very life of the industry as a whole, that the selection and appointment of judges should be given careful and thoughtful attention by show managers.

"In the show room the judge is the court of last appeal. It is a tremendous responsibility that the American Poultry Association and the managers of shows have placed upon the judges.

"The judges, to a greater extent than the breeders, fanciers and exhibitors, determine what is the correct fowl in type and color. Exhibitors strive to produce the fowl which in color and type are demanded by the judges.

"How important it is that judges give their best effort to the selections of winning specimens. Unless the judge looks beyond men, or the fowls which confront him—looks into the future and has the vision to behold the ultimately finished product in each breed and variety, his work is of little service to the present generation.

"Mere prizes can degenerate into mere selfishness glorified. Breed improvement is the big, creditable thing which should become the directing thought in the mind of the judge. Fame is not by the route of grabbing off prizes. The poultry world does not long remember a mere winner; but it does erect a monument of understanding and appreciation for those constructive breeders who know the full significance of breed improvement.

"The Standards for purebred poultry will be in the future, as they have been in the past, written on the work and findings of the judges, trusted by the breeders and fanciers. The position of the judge is, therefore, one of leadership as well as one of adjudication."

Sizing Up a Bird

Victor Bradley, well-known breeder of Barred Plymouth Rocks, remarked during the Boston poultry show that buyers were demanding more finish in plumage. It is our opinion that the tendency is toward better finish in Standard exhibition birds. We believe this to be true in all varieties that command a major position today. For the sake of comparison we illustrate on the next page a Black Java cockerel that was a winner for Henry Turck in 1889, also a White Leghorn cockerel that was bred by Arthur O. Schilling, artist and photographer, in the growing season of 1921. Comment on the relative finish of the two birds is unnecessary.

The White Leghorn was the first variety to reach that point of breed perfection where the relative finish of competing birds became an important point in showroom condition. Competition in White Leghorns became so keen that judges were forced to take note of the finer points in order to make their decisions. It was then that Daniel Webster Young produced a completeness of plumage that put his birds ahead of the field and gave to him a lasting reputation of "master breeder."

Today no White Leghorn breeder who aspires to the first rank, is satisfied unless he can grow a well-finished chicken. This requires more than mere feathers. No weak bird can finish. The bird must first of all have vitality, the capacity to grow a substantial body, and then he can finish.

The balance and structure of the body also has a great influence on the appearance of the finished bird. While chickens are dependent to a great extent upon their plumage to give them shape, the feathering is not everything in shape. The carriage of a White Leghorn's tail, for instance, is not all together dependent on the length of the tail feathers or the shape of the tail feathers.

Some tails are low because the shoulders are high and the back tapers down to the tail. We recently saw a picture of a bird of this kind, and noticed the picture particularly because the bird had been a winner at Chicago some few years

750,000 for 1922

They have long bodies and stocky legs. These chicks will grow and thrive and develop into profit producing specimens. Everyone is bred from birds of standard quality and real layers. This is your opportunity.

Why Millions of Chicks Die in the Shell
It's because of imperfect moisture regulation. Use an "AEM" Hygrometer and you'll always know exact amount of moisture in your incubator, and get far bigger hatches and bigger, healthier chicks. We make more than one thousand different thermometers for all purposes.

A. E. MOELLER

261-3 Sumpter St., BROOKLYN, N. Y.

ago. That picture confirmed our opinion that it would be a good thing to write an editorial on the finish and balance of a chicken, explaining how we look at a chicken and thus elucidating our manner of commenting on the different winners in the poultry show reports.

Some years ago Arthur G. Duston said that the shoulders were the key to White Wyandotte type, adding that birds he picked for breeding had their shoulders down, not up. It is common to hear breeders remark that "the bird's back slopes down too much toward the rear," meaning that the back is not horizontal and that the bird is high in its shoulders. A couple of years ago a White Leghorn

Black Java Cockerel. A Winner in 1899. This bird shows lack of finished plumage on tail in the the matter of sickles; also a V-shaped underline of body.

breeder remarked to an Ancona man: "Your male is too low in the rear; you want to tip the rear up so that the bird's back will not slope down like a house roof."

How would you go about that?

The explanation of this problem is to move the legs forward. The body balances on the legs. If the legs are set well back, the bird will throw his shoulders up, his rear end will be low, and his back will decline downward toward the tail. Look at a flock in which these faults are common in the males, and you will find females with their legs well back, not females with legs in the center of their body.

In observing the Schilling cockerel pictured herewith, note how well forward his legs are. His body and tail project well behind. The shoulders are down. This is secured by balance on the legs.

The Standard does not tell where the legs are to be placed. The makers of the Standard put in a section called "symmetry," which includes much that is omitted. When a bird has all that the Standard calls for in back, and legs, and tail, yet is wrong somewhere, it is commonly attributed to the sections not being joined together just right; and the Standard permits the judge to dismiss the matter by saying that the bird is deficient in "symmetry." This is a rather vague and careless way to make a Standard, and one who attempts to critically report the birds in the Chicago or Boston shows will find that he must be very much more specific than

to use so glowing a generality as "symmetry."

In referring to the height of a bird from the ground, we very often use the word "station." The expression "good station" means about the right height for the body to be carried above the ground, and "legs in the middle" usually means a well-balanced body.

Often a bird has proper station, balance and finish, and presents a nice side view, but is too narrow through the body. We usually try to get two views of a bird, a side view and a top view.

The side view may show a very nice profile. We recall a Light Brahma pullet at the Chicago show that stood in an end coop and as we looked across the floor, some twenty feet distant, she filled our eye. We walked over to the coop and saw a prize ribbon on it, lower than 1st. Leaning over the wire coop we looked down on her, and her whole top was narrow; long enough in the back to give her a nice profile, but lacking in breadth. Such a bird can be commented on as deficient in substance of body. Yet this is not a sufficient explanation from the breeding and mating standpoint.

A moments observation disclosed the fact that this bird was not square across her shoulders. Her wing bows dropped below the knap of her neck, and she was rounded across her back from one wing to the other. In other words, she was not flat across her shoulders and back. Put square shoulders on that bird and you would spread out that rounded top line into a straight line; and the bird

A White Leghorn Cockerel, grown in 1921, that shows finish of plumage and balanced Leghorn type.

would be not only wider across her shoulders but wider across her cushion.

It is not uncommon to hear a Wyandotte man say that he hasn't the breasts on his birds that he wants. The probability is that his birds are not square across the shoulders. Deep, round, full breast development does not go with round shoulders. In a breed in which massiveness in the males is important, squareness of shoulders is important so that you can get the breadth of back and fullness of front needed.

So much for the top line, which includes the contour of the neck, back and tail. There is another line, called the underline, that starts at the throat and runs down the breast and between the legs to the stern. This is as important a line as the top line. The Black Java cockerel is an example of a bird that has a V-shaped underline. The White Leghorn picture displays a bird with a well modeled under line.

Regal Dorcas WHITE WYANDOTTES

**The layers win and
the winners lay. \$4⁵⁴
net profit per hen.**

Plymouth, N. H., Jan. 1, 1922.

Mr. John S. Martin,
Port Dover, Ont.

Dear Mr. Martin:

We cleared \$750 on our flock of 165 hens last year. We have always congratulated ourselves that we started with your line of birds as aside from our own success with them, we find that most of our customers demand Regal Dorcas stock.

What have you to offer in a pen consisting of a pedigreed cockerel and three hens with records of 200 up?

Hoping to hear from you,

Yours sincerely,

H. F. SARGENT.

Maine Laying Record Report

"The pen of White Wyandottes entered by Reuben Lowe of North Shapleigh is the winner of the first Maine Winter Egg Laying Contest. During the six months ending April 30, 1919, the twenty pullets in Mr. Lowe's pen produced 2,395 eggs, an average of 119.75 per bird. If we estimate that they have produced 50 per cent of their yearly output it would give them a yearly production of 239 eggs per bird. This is a remarkable production and Mr. Lowe is certainly to be congratulated."—University of Maine, College of Agriculture, Leon S. Merrill, Director.

Note—This pen was of Regal Dorcas breeding.

\$5.21 Profit Per Hen

Central Valley, N. Y., Jan. 15, 1921.

From 125 Dorcas hens and pullets last year, I received 20,033 eggs. These eggs brought at New York prices \$1,224.40, and cost \$582.00 for feed, leaving a profit of \$642.00, an average of \$5.21 per hen. At Cornwall I won 1st cock, 1st and 2nd Hen, 1st and 2nd Pullet and am very proud of my first blue ribbons.

Yours truly,
MRS. MORGAN S. ELMER.

Think of it! Regal Dorcas females properly fed and handled are yielding around \$5.00 profit per bird.

Their wondrous beauty is well known and their achievements in the show room are history. However, underneath their attractive appearance are the solid utility qualities that mean profit and those who own a flock of them have the intense satisfaction of owning fowls that not only delight the eye but yield a handsome revenue. As as all around fowl, Regal Dorcas White Wyandottes are as near perfection as anything you will find in the feathered world.

Regal White Wyandottes Are the Best in the World

If you are not getting good results in fertility and egg production, if your birds are not winning as you would like, why not make a fresh start by getting a foundation pen of Regal Dorcas White Wyandottes?

4000 Cocks, Hens, Cockerels and Pullets For Sale

Cocks and Cockerels—\$10, \$15, \$20, Breeding Pens—\$40, \$50, \$75, \$100 and \$25, \$35 and \$50.

ROGERS' WHITE LEGHORN FARM

SOUTH STREET ROAD F. D. Rogers, Owner ELGIN, ILLINOIS

Between the top line and the under-line and on the side of the body, is the wing. If its points go down like a sword hanging at the side, or if the end points of the wing pinch into the sides of the body, then a certain amount of correct detail is lost to the bird. As a rule a horizontal wing is desired. And in a Wyandotte or Rock female, a wing that pinches into the sides of the body, making a sharp line of demarcation between the cushion and the wing, spoils the smoothness of plumage that a high-class exhibition specimen must possess to win in such classes as were penned at Boston.

In writing up show reports we do not stop to count the points on a comb. With the single exception of the comb on a White Leghorn pullet at Chicago, we do not recall having counted or mentioned the number of points on the comb of a single individual at either the Chicago or Boston shows. It is the balance of the comb, the texture of the comb, that counts.

In looking at a chicken we look at the more fundamental things that make a chicken. If the comb is badly formed it is well to say so; but generally speaking the formation of the skull, the smoothness of the face, the brightness of the eye and the roundness of the beak are a whole lot more important than an extra point on the comb or a comb that is a fraction of an inch high.

We want a chicken first, a well-balanced, well-finished, well-turned-out bird of good substance. No utility man can ask for more. Then on top of this we want the color, the markings, and refinement, and detail that only come from careful breeding. It is a pretty big contract to produce all of this. It must all come out of an egg such as a million people eat every morning for breakfast. This is the miracle—the wonder of the thoughtful who have capacity for appreciation. But, the breeders of America do not need to have us say that they have done wonderfully well, for that is evident to even an indifferent visitor to a great poultry show.

That there is a difference in birds none will deny. It is our desire to comment on them in an orderly, consistent and helpful manner. Some of the points we mention are necessarily minor, for competition between two birds may be so close that the judge's decision rests on a minor point. When we say that a bird is light in eye color, lacks station or is pinched in tail, the breeder will know that these are faults that can often be corrected in a single generation.

On the other hand there are some things that are much more important. It is unfortunate that any breeder should allow split wings or split tails to breed in his flock, for these faults are persistent in reproducing themselves. There are two rows of main tail feathers, usually seven feathers on each side, and these should come close together at the top. When they do not, the tail may be said to be split open. A split wing is the result of the primary feathers of the wing not tucking up under the secondaries, with a tendency for the primaries to fold on the outside of the secondaries. Sometimes this defect is so bad that the wing is actually twisted, and the defect is nothing short of a deformity. These two defects are in about the

CARRY EGGS SAFELY The Keipper Way

Fertility and hatching qualities of millions of eggs are damaged yearly by careless methods of shipping. Think of it. Why not save the fertility and insure satisfactory hatches for your customer by using Keipper Non-Shock Egg Carriers? Each egg held in place by rubber bands which prevent vibration in transit, ruptured tissues and injury to fertility.

You Can Safely Guarantee Eggs Delivered in These Carriers

Boxes shipped all assembled ready for use. Strong outer box can be used repeatedly

15 egg size each 35c.	- dozen \$3.00	- 100 \$22.30
30 egg size each 60c.	- dozen 5.10	- 100 38.25
50 egg size each 90c.	- dozen 8.25	- 100 61.00

Remember, above prices include postage PREPAID. Others don't pay postage. Besides our factory at Milwaukee we maintain our own warehouse at Kansas City, Mo. and Fullonville, N. Y., and will ship from nearest point. Order today and be ready. Send for our illustrated catalog and save money. 30 and 50 egg size sold in half dozen lots at dozen prices.

KEIPPER COOPING CO. 1401 FIRST ST. MILWAUKEE, WIS.
EASTERN OFFICE, JOHNSTOWN, N. Y.

Have You Learned To Typewrite Yet? Or do you still use the tiring, laborious hand-writing which is practically out of date? In hundreds of homes there are Oliver's for the use of the entire family. Typing is fast becoming universal.

Free Trial

The coupon brings the Oliver to your office or home for 5 days' trial. Judge for yourself. Keep it or return it.

Easy Terms

The Oliver can be bought on easy monthly installments and you have the use of it while paying. Read our liberal offer.

Which: A Standard Typewriter for \$100? A Standard Typewriter for \$49.50?

We do not mean to ask a ridiculous question—but it is just what you face nowadays in buying a typewriter.

Sold in the usual manner, the price of a standard typewriter is \$100 or more, the established price for over 25 years.

Sold direct from the factory in the Oliver way, the price is half. You save the cost of selling.

We have found that it costs \$50.50 to sell a typewriter in the usual manner. Likewise, we found that it was unnecessary to maintain an expensive force of salesmen and agents, and costly branch houses in 50 cities.

Be Your Own Salesman

Our new plan of selling has multiplied our production four times over, and that also helps us offer new economies.

So today the Oliver offer is the most liberal of all—a brand new, standard typewriter for only \$49.50 cash, or \$55 in installments. Remember, this is possible only because of our simplified selling plan and enlarged output. The price would still be \$100 if we sold in the usual manner.

Note, also, that you get a brand new machine, our latest and best

model, a 25-year development. Why, even a rebuilt typewriter costs considerably more.

Over 900,000 Oliver's have been sold. The Oliver is a favorite among big businesses as well as among individuals. It is famous for its speed, easy operation, durability and fine work.

A Severe Test

The coupon brings the Oliver for Five Days' Free Trial. When the Oliver comes, use it as if it were your own. Compare it. Then if you agree that it is the finest typewriter, regardless of price, and want to buy it, send us \$49.50 cash. Or if you wish to pay in installments, the price is \$55, payable \$3 after trial, then \$4 per month.

If you want to return the Oliver, ship it back at our expense. You do not risk a penny—we even refund the outgoing transportation charges.

Through the trial you are your own judge—no salesman need urge you. You can imagine that it takes the finest kind of a typewriter to face a trial like this.

Mail the Coupon Now

Make this Oliver test. See if you want to save the \$50.50, or if you would rather pay \$100. The trial costs you nothing. Nor does it obligate you to buy.

Note that the coupon brings EITHER a Free Trial Oliver or Further Information. Check which you wish. Then send the coupon immediately, so as to insure early delivery of your free trial Oliver.

Canadian Price, \$79

Kerlin's Grand View Poultry Farm

Center Hall, Route No. 3-A, Pennsylvania, U. S. A.

same class as long, snakey heads and knock knees.

To tolerate such a defect in the show room is to remove the purebred poultry business from the contact and buying power of the practical poultry keepers of the country, and their number is legion. We want to keep the breeds without any bad fault creeping in so that we can always say to every poultry raiser: "You ought to have Standard exhibition chickens; they will mature better, grow better and be more satisfactory everywhere." In order to keep the breeds in this splendid state of health we believe it a mistake to comment favorably on a bird that has a primary defect, a major fault.

It isn't a question of "what money can I get out of the fancy chicken business this year and next year." That is too short a time. If that were the basis then show reports could be written purely in the spirit of expediency, and the comment could be the expedient thing to say. But one or two years are too short.

Why not a cycle of five or ten years? Why set your vision on what you can get out of the business this year or next, rather than what you can do in five years or ten years? E. B. Thompson works on the longer cycle. Those who read the criticisms in this writer's show reports will get his view point if they will but look into the future five years or ten years hence, and see the possibilities and bigness of what the purebred poultry industry can be made in that future. Perhaps that viewpoint will account for our unwillingness to enthuse over a bird, even a winning specimen, if it is fundamentally wrong and cannot contribute to the advancement of purebred poultry in America.

Show Reports.

This is an editorial written in the Boston show in the din of the crow and cackle of the birds. We are in the midst of the show report. The old question arises: How is the best way to do the job?

There is a Dark Brahma cock and hen. Each wins 1st. Any visitor to the Boston show who fails to see them misses something. Any show reporter who fails to mention them leaves out something. The quality of these two birds is unprecedented in the life time of the younger generations of fanciers.

What if that hen had won 3d or the cock had won 2nd? The same quality would still be there. The prize ribbons would not change that. It would still be true that a visitor to the Boston show who should fail to see that pair of wonderful Dark Brahmas would miss much. And would it not still be true that the show reporter who did not mention those two birds would be omitting something?

We are told that if we mention the 3rd hen as extraordinary, or the 2nd cock as an outstanding bird, we are rejudging the show, injuring the judge and weakening the prestige of the winners. Friends, it is not our desire to rejudge a show. It is our desire to tell the folks back home, who could not attend the show, what we saw. We do not claim infallibility or super ability. We are just trying to discharge our obligation to tell fairly about the chickens as we see them. We are human, the human element of weakness and error enters

Hatch with Electricity

Lectro-hatch Electric Incubator Element

Convert your Old Incubator into a Modern Electric

Easily installed. Steady, even heat. Needs no watching. No fumes. More and better chicks.

Why worry along with the fuss, dirt and inferior results of an oil or coal incubator, when you can so easily and so cheaply convert it into a clean, modern, dependable electric machine?

It takes but a few moments to put the Lectro-hatch Electric Incubator Element into your old machine, and there you are—ready to hatch with electricity.

Think what it means to turn an electric button and let electricity hatch your chicks in an incubator that regulates its own heat and needs no watching.

Clean, Convenient and Always Dependable

The Lectro-hatch is so clean, simple and odorless that you can keep it anywhere in your home. It has no lamp to fill, no wick to trim, no smoke, no soot, no risk of fire or explosion. It automatically regulates its own heat and needs no attention whatever, except the turning of eggs when desired.

So far as temperature is concerned, you can go away and leave it for days at a time. When you come back, the weather may have changed, the room may be cold, but the temperature in your incubator will be just exactly what it was when you left it. You adjust the Lectro-hatch to any temperature you want and it maintains that same steady, even heat all the time, until you're ready to change it or shut it off.

Bigger Hatches of Healthier Chicks

Remember, with the Lectro-hatch, there is no smoke or poisonous gas to stunt or kill the chicks in the shell. Fresh, pure air circulates constantly. There are no cold corners, no ups and downs in the temperature. The largest, most successful poultry raisers in the United States will tell you, from experience, that day-old chicks from Lectro-hatch machines have the appearance of being one week

old. They are bigger, livelier, healthier in every way. And it is not uncommon to hatch 80 to 90 percent of the fertile eggs in the Lectro-hatch.

Easy to Install, and Even Easier to Operate

We send plain and complete instructions for converting your machine into an electric. You don't have to know a single thing about electricity to install the Lectro-hatch or to run the incubator. Bore a hole and drive a few tacks—that's all there is to installing it. Turn a thumb nut until the thermometer shows just the degree you want. After that, our patented Regutroller automatically holds that temperature for you, absolutely steady and even.

Lectro-hatch Elements are made to fit any size or style of machine. They attach to any electric light socket, and operate from any kind of electric current—from farm lighting plant, traction line or town lighting systems.

Costs Very Little

The cost of a Lectro-hatch Element is small, and the expense of operating it figures about the same as for a good grade of oil. But, oh, what an enormous difference in hatching results, in cleanliness, in ease, convenience, and peace of mind.

Hatch With Electricity This Year

If you are interested in electric hatching, write us at once. We can supply either the element to convert your old machines or complete new Electric Incubators and Brooders. The same wonderful principles are in both—steady, even, dependable heat; no worry, no work, no watching, no smoke, no gas, and absolute assurance of bigger hatches and better, healthier chicks.

Investigate electric hatching—the most wonderful development in the poultry industry. Write to-day for complete information.

Electric Controller Co., 410 E. 10th St., Indianapolis, Ind.

Read What Leading Poultry Raisers Say About It.

Will Increase Lectro-hatch Capacity and Eventually Use Nothing Else.

"We are glad to say that the electric heating system installed in our Mammoth Incubators was entirely satisfactory, the percent of hatch being very much increased and the chicks large and strong. We hope to be able to increase our Lectro-hatch capacity each year and eventually use nothing else."—PORTERFIELD HATCHERY, Richmond, Indiana.

U. R. Fishel, World's Leading White Rock Breeder, says:

"We are the first to use exclusively in our Mammoth Hatchery of 18,000 capacity, the wonder element, ELECTRICITY. Not only does this method of incubation hatch stronger chicks, but it hatches larger ones. They really look like week-old chicks as hatched by the old method of incubation." (Note: Mr. Fishel uses Lectro-hatch.)—U. R. FISHEL, Fishelton Farms, Hope, Ind.

Large Commercial Hatchery Pleased with Lectro-hatch.

"The two machines we fitted with your Electric Element are working splendidly. The absolute safety in their operation, with the better hatched chicks and the elimination of all worry over regulation of temperature, regardless of weather changes, brings to the hatcher as near a perfect incubation device as seems possible. We hope shortly to install more machines fitted with your appliance."—SNOWFLAKE HATCHERY, Indianapolis, Ind.

Judge Walter C. Young, A. P. A. Judge, Supt. Moraine Farm, Dayton, O., says:

"Never have I operated a machine that holds such an even temperature, all through the hatch, as the Lectro-hatch. And the most pleasing feature of all is the size, weight and vigor of the chicks as they come out. Last year we hatched 75 percent of all fertile eggs left in the machine. One hatch in particular we brought out 83 chicks from 85 eggs."—WALTER C. YOUNG, Supt. Moraine Farm, Dayton, Ohio.

Here is a real Jersey Black Giant!

Weight 13 lbs.
First cock at
seven big shows
including the
Garden & Boston

The Largest Domestic Fowl

The bird that made famous "Philadelphia Chickens," America's finest table poultry. Bred extensively by New Jersey poultry growers for a half-century, the Giants are now receiving the recognition of fanciers and breeders.

Thoughtful poultrymen realize the possibilities of the production of table poultry. A big egg yield is fine, but half the chicks raised each year and the wornout layers go to the market for table use. The Giants are good layers now, especially in the winter, and are rapidly improving in this respect. Further, they make *the choicest table poultry*. They afford two big sources of income—eggs AND MEAT.

Jersey Black Giants grow like weeds. Cockerels commonly weigh ten pounds and upwards at six to seven months. As capons they reach thirteen to fourteen pounds, dressed, at twelve months of age, and such on the present New York market return the grower \$8 or more per head.

The Giant is, first of all, husky, vigorous and sturdy. For fifty years it has been grown without coddling or pampering. It is big—but not clumsy—active, and a great rustler. It is beautiful, but free from frills. It is a real business fowl.

We were first to "discover" and seriously undertake the improvement of the breed. As a result of six years of earnest work we have a wonderful flock, possibly the best on earth. We offer Breeding Stock, Baby Chicks and Hatching Eggs at prices you can afford. Investigate now.

Circular FREE. Giant catalog, with illustrations and breed history, 10c in stamps.

Headquarters For JERSEY BLACK GIANTS

into our work. We only do the best we can, that's all.

Perhaps it is not worth it. The way of the reformer is hard. It would be a whole lot easier if editors had been writing up shows in the past, not skipping over the show in a superficial, yet diplomatic, way and writing up advertisers. It is something of a jolt to change the old system. Lots of men, good friends of ours, do not like it.

They will, for instance, point out the fact that we put the judge in a hole by saying that the 1st Black Cochon cockerel at Boston has sprigs on the blade of his comb. They will say that such a comment is unnecessary.

Of course, we do not agree with that viewpoint. Our remarks are made with the kindest feeling toward judges and exhibitors. We simply pull on our armor and go ahead with two thoughts as guiding stars. First, the permanent welfare and advancement of the breed. Second, the honorable interest of our readers who desire to know what an experienced fancier sees and thinks of the birds as they stand under the ribbons. He knows his own birds are not perfect, and he is legitimately interested in knowing what are the qualifications, the good and the bad, of the birds in the great shows of the country.

What is a poultry paper for if it is not to satisfy this interest of its readers?

Is Agriculture to Boom?

The Department of Commerce furnishes the following review of agricultural exports for the year, 1921:

"With cereals and cereal products, we have exported during the past year thirty-one billion pounds as compared with an average of nine billion pounds before the war or more than three times as much. With meat products we exported during the past year about 80 per cent more than the pre-war average; of vegetable oils practically six times as much, and of dairy products about eleven times as much.

That exports still continue heavy in volume is shown by the fact that for the new wheat beginning July 1, we have exported one hundred eighty-one million bushels against a pre-war average of seventy-one million bushels or about two and one-half times as much. We have exported about eight times as much rye and three times as much corn since November 1. When we compare the values the ration is still higher, as average export prices are still considerably higher for 1921 than were pre-war prices. When we consider that Europe, alone, takes between 80 and 90 per cent of the exports of food products, the large takings from the United States for the past year are really remarkable, considering the financial difficulties under which Europe is struggling."

This seems to confirm the opinions of a gentleman with whom we talked during the Boston show, who said:

"I have read the editorial in the January issue in which you suggest the possibilities of cheap feed for poultry breeders for several years. This is the western viewpoint, where you see the enormous stocks of corn in the crib. Europe is a regular suction pump that is taking our feeds. Agriculture was the first to feel a depression and it is now coming back. By fall the slack in the labor market will be taken up. Be optimistic about agriculture as a whole. Things are already on the upgrade in New England."

Continuing on this subject, this gentleman said:

"The gold imports to the United States in 1921 were about \$600,000,000. They were the greatest since 1916, when Europe was sending gold here for war materials. There is only one place the gold goes to—into the

banks—and then into the Federal Reserve System.

"There is now \$.98 worth of gold behind every dollar. What is a dollar? It is a promise that the government will give you 22 grains of gold. There has never before been a time in the history of this country when, if everybody should go to the banks with their paper money and demand gold, the government could fulfill its obligation. Today the Federal Reserve System has approximately one dollar's worth of gold to every outstanding paper dollar.

"These gold reserves are enormous, unprecedented. What will be done with these reserves of gold? That depends on the policy of the Federal Reserve System. There is a choice of one of two courses. The reserves may be used to maintain a dollar's worth of gold behind a dollar's worth of paper. This may be done by high discount rates which discourage borrowing. The other course is to establish low discount rates which accelerate borrowing and stimulate industry and business.

"The Federal Reserve System has not been in operation long enough to formulate a definite program. At the time when credit conditions were most strained, the system approached the legal limits fixed by Congress. No one would suggest that the banking institutions of a great country like the United States should always be at the lowest limits. On the other hand, no banking system of the commercial nations of the world has ever maintained \$1.00 worth of gold for every paper dollar issued.

"What of the probable course of the banking system in this country? The reserve of gold will not be below the limits fixed by Congress, and probably not as high as at the present time. In other words, we are approaching the upper limits of gold in relationship to paper money, and the Federal Reserve System in getting in a position where, if discount rates are reduced, it can expand credits to a considerable extent, which, based on past experience, will speed the wheels of industry."

That is another way of saying that money to earn money must be put to work, and money at work means buying power in the cities, assuring the heavy consumption at remunerative prices of the poultryman's high quality eggs and poultry meat.

Poultry Meat in New England.

The Boston market has long had the reputation of demanding the finest quality in dressed poultry—and paying the highest price—of any market in United States. The soft roaster, grown in the shore country south of Boston, was famous among New England epicures for many years prior to the world war.

The visitor to the Boston market today does not see the same fine quality in dressed poultry that distinguished the large, plump carcasses of the south shore soft roasters of a few years back. There are more Rhode Island Reds with the thin legs and high breast bones that characterize egg type in poultry.

W. S. Baker, county agent of Plymouth County, Massachusetts, stated during the Boston show:

"I heard more about soft roasters five years ago, before taking up my work in Plymouth county, than I have heard since. The tendency today is to combine eggs and meat."

E. C. Thayer, practical poultryman of the south shore, said:

"There has been a complete revolution from the specialized meat type. The quality of the meat poultry has gone down. Many poultrymen are selecting their late molters for their breeding pens. They are something of a nuisance when short of feathers in the early winter, but they do not lay themselves out before the breeding season, and make good breeders.

"I do not grow what you would call 'soft roasters.' I make both ends, using April

Give Your Baby Chicks a Good Strong Start in Life

IT pays to feed baby chicks on Globe Chick Mash to build up sturdy bodies quickly. Chicks are just an expense while they are little. This nourishing, easily digested food shortens their non-productive period by giving them just the elements they need to make substantial bone and muscle. They get to the laying period many weeks before improperly fed birds start producing.

Chicks cannot get all the protein they need out of hard grain scratch feed. They do get plenty of this strength-giving substance in Globe Chick Mash. Even a 3-day-old chick can digest it when fed as per directions. From the seventh day on, keep it always before them in a hopper.

You'll get your reward in watching them grow.

DICKINSON'S Globe Chick Mash WITH DRIED BUTTERMILK

The Standard for 19 Years

Only Dependable, Honest Products could stand that test

Globe Egg Mash Makes Better Eggs and More of Them

Feed your hens all they will eat of Globe Egg Mash. It makes them lay, because it contains the elements from which good eggs are made. Some feeds *stimulate* egg production with a high protein concentrate. Globe Egg Mash does not. It increases the output in a healthy, *normal* way by giving the hen egg-making materials in the right proportions. Eggs produced in this way do not drain the hen's vitality.

Eggs delivered by Globe Egg Mash fed hens are good eating eggs, because they are firm, sweet and palatable. But they are almost too good to eat—they're worth more for hatching. They hatch out fine, upstanding chicks that have lived well within their shells—and show it. That's what Globe feeding does for your laying hens.

*Your dealer sells Globe Feeds or will get them for you.
Don't accept substitutes. Insist upon Dickinson's.*

Vigorous Strain Silver

CAMPINES

The great winners at Madison Square Garden, Boston and New York State Fair are the connecting links of mating for the production of prize winners and record layers. No birds are mated that have not the ability to lay in winter and summer and possess the Standard requirements that make them the most beautiful of all varieties. Our birds produce more eggs per dollar invested in feed than any other breed on earth. Not only quantity, but great big meaty white shelled eggs, that make the poultryman happy.

Eggs For Hatching

Start right and your poultry keeping will prove fascinating and profitable. You cannot secure a better producing and money making variety than Homestead "Vigorous Strain" of Silver Campines. Eggs—One setting, \$10.00; two settings, \$17.50; extra choice selection, one setting, \$15.00; two settings, \$25.00; Single birds—Females, \$7.50 and up; Males, \$10.00 and up; Pens, \$40.00 and \$50.00 and up.

MAHOOD'S S. C. R. I. REDS

THEY POINT THE WAY

Five Firsts and Best Display at Chicago Coliseum

December, 1921, in the best class of S. C. Reds ever exhibited at this show is part of the winning made by Mahood's S. C. Reds at their tenth successive, successful exhibit at this show. This record has not been paralleled by any other S. C. Red exhibitor at any one of the three largest national shows for many years.

Eggs and stock from Mahood's Reds have been producing great numbers of winners, remarkable breeders and high record layers for Mahood's customers, year after year.

But still greater numbers of these remarkable exhibition and breeding birds and high record layers will be produced by Mahood's customers from eggs and stock purchased from Mahood's yard this season as the inevitable result of the improved quality of Mahood's Reds.

Eggs from Mahood's carefully and scientifically mated pens, rich in the blood of ten generations of Chicago Coliseum winners—\$20, \$15, \$10 and \$6.50 per 15.

Eggs from utility flock—\$20 per 100, \$10 per 50.

Snappy, vigorous, fine colored, splendid type cockerels, \$7.50, \$10, \$15, \$20, \$25, \$35 each. A few choice pairs and trios.

Send for Mahood's beautifully illustrated free mating list.

E. W. MAHOOD

chickens. I furnish a number of eggs to hatcheries and my pullets lay in the early winter. My cockerels are hardly early enough to make the peak price, yet I do get nearly the soft roaster price."

A number of New England plants laid idle during the war. Henry Dana Smith, who grew some of the finest roasters on the south shore, went out. Some of the growers are coming back, and present prices should encourage a much larger production of roasting chickens.

Conditions in the old days were not more favorable than at this time. One lesson has been learned, that is, the danger of manurial contamination from the continuous cropping of the ground with poultry. Tainted ground threatened to put some of the growers out of business when the war come on. More land, or more rotation of crops and poultry, will probably mark future operations.

Joseph Tolman, whose plant had a three years rest, is back heavy and attended the Boston show with his old time interest. He said:

"I sold uncaponized cockerels at 50 cents a pound last June. We do not look for a continuation of last year's prices, but good heavy stuff is selling for as much as 34 cents a pound alive at the seller's door. Some of the stock, however, is thin, and lacks fleshing qualities."

The right breed is important. One breeder of Light Brahmas told of receiving 40 cents a pound alive in December; in January heavy dressed poultry was selling for 45 cents in the Boston market. John H. Robinson stated that 9-lb. stuff had brought as much as 90 cents a pound last spring. Such prices would normally have stimulated the more extensive growing of heavy roasters. That more good market poultry has not been produced has probably been due to the fact that greater profits laid in keeping highly prolific hens of the larger breeds, selling their eggs for hatching in the spring, and marketing the surplus cockerels as fairly good market poultry. The prolific type was most useful and profitable in meeting the demands of restocking the poultry flocks which were badly depleted during the war.

When the New England farms are restocked, and the outlet is largely the butcher stalls, growers will be more interested in size and fleshing quality and will probably get back into the big, heavy White and Barred Plymouth Rocks and meat-type Light Brahmas.

While time inevitably brings its changes, and new men do things in new ways, it seems reasonable that the heavy well fleshed roaster of yesteryear will again be extensively grown in eastern Massachusetts.

Two Varieties of Barred Rocks.

Inasmuch as the American Barred Plymouth Rock Club has voted to submit to its entire membership the question of recognizing Barred Plymouth Rocks as Light and Dark varieties, the opinion of that master-breeder, Edward B. Thompson, should be of value to those who, by their votes, are to commit their club to a continuation of sound policy or to a future policy of abject folly. Let every breeder weigh carefully the following statements on this important issue. Mr. Thompson says:

"The whole subject of dividing the breed would be ridiculous if it were not so serious. In my opinion, the proposition to divide the

Get Big Hatches—Raise Every Chick

It's time to select, mate and condition your breeding pens—time to plan for a successful hatching and brooding season. It pays to plan your work and work your plan. Losses during this critical part of the poultry year cannot be made good later.

Use strong, husky breeders—then put them in tip-top condition. Thus you will secure a supply of strongly fertilized eggs that will hatch—eggs that will give you the big, husky chicks that you can grow. And the best way to do all this is to follow the plan that leading poultrymen have found so satisfactory—add

Pratts Poultry Regulator

to the poultry ration regularly. This dependable poultry tonic and conditioner is a mighty big help in toning up and invigorating the whole system, and in increasing fertility. Save Money! Buy Pratts in 12- or 25-lb. pails; 50- or 100-lb. bags.

When the chicks arrive, *save* them and *raise* them by starting them safely on the road to quick, lusty growth and early, profitable maturity.

It costs money—in eggs and time—to hatch chicks. If you lose most of them after they're hatched, you lose just so much real money. And if it's too late to replace the early hatches—your season is ruined. If you are to make a big success *you must raise the chicks*, grow them into fine-quality table birds or husky, persistent layers. The way to do this is to feed them, from their very first meal,

Pratts Buttermilk Baby Chick Food

The real danger lies in the critical first few weeks after hatching. Give the youngsters a strong start—with digestive organs working right and every part developing normally—and you can easily carry practically every one of them to profitable maturity.

Pratts Buttermilk Baby Chick Food—the original “Baby Food for Baby Chicks” does just this.

Containing every food element needed to build bone, muscle and feather, its use insures even development. Being ground to extreme fineness, it is “mechanically predigested” and takes the strain from the organs of digestion. A large proportion of buttermilk—in the finest form—provides flesh and bone-building materials and the lactic acid that has such a favorable effect on digestion and intestinal disorders. And—this is important—but a very small percentage of crude fibre.

Protect your flock against epidemics of roup, colds and other similar troubles. Use a solution of

Pratts Poultry Disinfectant

to kill the disease germs if they appear—to keep the poultry houses and equipment in sanitary condition. Pratts Poultry Disinfectant is at once safe, efficient and economical. A single gallon makes a barrel of powerful solution.

Pratts Powdered Lice Killer assures comfort to hens and chicks by killing off worrisome pests. Economical, efficient. **Pratts White Diarrhea Tablets** should be given as a *preventive* to all chicks and kept on hand at all times for use should this disease appear.

breed is a hollow pretense. If a breeder can exhibit and win satisfactorily on the present standard males and females he is doing well. A prominent western judge has said to me that those who want the breed divided acknowledge their failure in producing high quality birds conforming fairly well to the present Standard.

"Two separate breeds cannot be crossed together with any results. However, the pullet bred lines and the cockerel bred line of Barred Rocks can be crossed together because both lines are one breed only.

"The beginner and the amateur should be protected against the certain practice that would follow the recognition of 'Light' and 'Dark' Barred Plymouth Rocks by older breeders who would proceed to produce pullet bred males to exhibit and cockerel bred females to exhibit regardless of their breeding quality. The blood lines and ancestry of a breeding bird should hold the balance of power in the selection of breeding birds.

That is a statement that covers the entire ground. But, again in the following words, Mr. Thompson restates the proposition with the detail and logic that are characteristic of the man, and those who are interested more in the breed than they are in multiple classes and numerous prize ribbons will not fail to be impressed by the force and science of his reasoning:

"This light and dark proposition that some breeders want made operative is nothing but a fallacy. I have never heard or read any argument in its favor that could stand any logic or reasoning. The proposition to divide the breed looks very plausible to those who do not understand and have not had the matter explained to them.

"As stated in your editorial in the December number of the Journal, the pullet line and the cockerel line in the best bred birds are not far apart in color. You remember that I exhibited four pens at Chicago in January, 1918, to illustrate how closely the two lines were being brought together in color.

"In the first place, the fact that there would be four to six matings instead of two as now should be argument enough in itself to condemn the plan. In the standard male and female we have ideals to breed ideal birds so long as we keep within legitimate lines. There cannot, however, be a standard for breeding birds. A breeding bird must be selected of the right color to mate with another bird to produce an ideal chicken. It may be that the breeding bird in a specific case must be light in color, in another case medium in color and in still another case dark in color. Therefore, there can be no standard, either written or pictured, of what is required in a bird for breeding purposes. The male selected depends on the females available and vice versa.

"The pullet bred males are the means of producing the standard ideal exhibition pullet and these males may be either light, medium or medium dark in color. They are the means to an end. The same with cockerel bred females. They are used only for producing an ideal exhibition male and these cockerel bred females may be different shades of color to meet the needs of each specific mating. We look to the blood lines of the breeding birds and then to the individual color to meet each individual case in mating. That is all there is to it and anyone who wants breeding birds standardized has a wrong motive or is misinformed.

"If this thing should come to pass the beginner would be badly mixed up. At present it is fairly clear sailing for the beginner.

"The whole thing is ridiculous to me. Think of the necessity of having to explain to a visitor in a show and tell him which of two birds is a light Plymouth Rock and which is a dark Plymouth Rock when the color of the two birds is not far apart. I would say to the people who want the breed divided in order that they may sell more birds, that if they can produce fine males and females that come near the ideal standard description they can sell all the pullet bred males and cockerel bred females of good quality of their best lines of breeding that they can produce. The trouble, frankly, appears to

be that so many who desire the breed divided are unable to win satisfactory in the standard ideal classes. They give a Macedonian cry for help to enable them to win some kind of a ribbon.

"It is pitiful to note some of the cockerel bred birds and pullet bred birds that are exhibited. Frequently a bird winning in the pullet bred male class has no sisters of any value, and a cockerel bred female winning in the cockerel bred female class frequently has no brothers of any value. There cannot be a standard for breeding birds.

"One very strong argument against dividing the breed is that no one who ever produced a great Barred Rock in quality wants it. Furthermore, as you stated in the December editorial, the two lines of Barred Rocks can be crossed together often with splendid results. The pullet bred line and the cockerel bred line are two families of the same breed.

"Some three or four years ago Charles Latham wrote a good article or two on this subject for the American. I have forgotten the year and the month, but think it was during 1917. Latham bred some fine pullets and handled only the pullet bred line, but he did not want the breed divided.

Latham knew, as Thompson knows, and states, that if a Light Barred Rock male is recognized and classes provided for it, males will be manufactured for exhibition purposes.

The American Poultry Association has expressly prohibited in its show rules the placing of regular first and second prizes on the pullet-bred males and cockerel-bred females. Disloyalty of show managements has resulted in not abiding by this rule, Sec. 21, which provides that only "special prizes" should be offered on these birds.

In shows where cockerel-bred females and pullet-bred males are exhibited the most extreme inconsistency follows when a breeder shows beautiful cockerel-bred pullets and wins well on them, but fails to have a cockerel placed in the Standard exhibition class. That is by no means an unusual condition.

If breeders would give up their dark metallic males and breed the clear, bright color that Mr. Thompson is producing, they would find that their cockerel and pullet lines were coming closer together, and they would be much less interested in DARK Barred Plymouth Rocks and LIGHT Barred Plymouth Rocks.

Mr. Thompson does not speak for himself alone. He speaks for the breed, concluding his argument as follows:

"I am speaking for what I believe is the welfare of the breed, and I speak for the benefit of those we are endeavoring to become better acquainted with Barred Rocks in order that they may succeed and bring to themselves the rewards which go with high quality. Personally, I am in a position to breed and produce the highest quality Barred Plymouth Rocks under whatever name they may be called. At the same time, my love for the breed forbids my entering into any plan or agreement that would be detrimental to the best future interests and progress of the breed and I verily believe that to divide Barred Rocks into two breeds, Light Barred Rocks and Dark Barred Rocks, is unwarranted and unjustifiable from every point of view.

"The certain fact that there would be from four to six matings used in place of two as at present, strongly condemns the proposition. Any system that makes the breeding of Barred Rocks more complex is one to be emphatically avoided. I have heard arguments on the subject from all angles, but cannot reconcile any of them to the best interests of the breed and the beginner.

"On first thought it might appeal to the beginner and to any persons not well acquainted with the breed that the proposition to divide the breed was right and proper. I am convinced, however, that after the subject

CHICKS

Twelve years ago we hatched 20,000 chicks; this year we are hatching 300,000. The great bulk of our trade is with intelligent, experienced poultrymen, whose living depends entirely on what chicks they purchase, and who can't afford to take chances. Two-thirds of our customers will be those who have bought our chicks before, and know the value of

Lord Farms Leghorns

Bred for generations for

High average egg production

Small mortality

High quality eggs

Any experienced poultryman or poultry editor would tell you that a flock average of 150 eggs is a mighty good average; but with proper care and housing you can beat this all to pieces.

Haverhill, Mass.,
January 9, 1922.

I am much pleased with your stock. In May, 1920, I purchased 25 Grade A day old chicks and raised every one. Selected 10 pullets which started laying October 17, 1920, and up to October 16, 1921, one year's laying, they made a total of 2013 eggs, which I think was wonderful. A flock average of better than 200 eggs.

I also raised from these chicks a wonderful male for which I refused \$15.00.

DANIEL S. FLANAGAN

Kennedy, N. Y.,
April 13, 1921.

Your shipment of 1000 chicks arrived today at 4 P.M. They are the best and most uniform bunch of chicks that I have ever seen. I live in a locality that is a hotbed for Single Comb Leghorns and I believe this shipment will do you a lot of good.

R. A. ROGERS

Belgrade, Me.,
January 4, 1922.

Your strain are wonderful layers; 67 pullets laid 1041 eggs in December, averaging 45 a day now, though it has been very cold here.

C. H. MILLS

Kennedy, N. Y.,
October 30, 1921.

The pullets I have from your stock are doing some wonderful laying. They are just past six months of age and for the past two weeks I have been getting a fully 55% flock average in eggs. They are so far in advance of the other strain I have of the same age that there is no comparison in the two and, truthfully, from now on there will be nothing else raised on our farm. My eggs, at present prices, are netting me slightly in advance of \$25.00 per day.

R. E. ROGERS

LORD FARMS

61 Forest Street
METHUEN, MASS.

Your Profit dies with the Chicks

DEAD chicks mean loss of profits that could have been made—to say nothing of the time and money spent in hatching them.

Raw, indigestible, sour and musty feed kills the chicks and robs you of your profits.

Give your chicks the feed they can digest, the feed that keeps sweet and clean—*H-O STEAM-COOKED CHICK FEED*.

It is a scientific combination of Cracked Corn, Cracked Wheat, Cut Oatmeal, Cracked Peas and Cracked Kaffir Corn, cut to pin-point fineness and *steam-cooked* by the wonderful H-O process. This process so prepares the grains that they are readily digestible even when eaten by the most delicate chick. White Diarrhea and kindred ailments never occur. Further, it prevents deterioration so that *H-O STEAM-COOKED CHICK FEED* keeps sweet and clean indefinitely.

Poultrymen everywhere testify that *H-O STEAM-COOKED CHICK FEED* brings more chicks through the critical period that follows hatching, and makes them grow and develop in record time. It puts real profits into poultry raising.

Make this the most profitable hatching season you have ever had—*live* chicks and healthy productive chickens—by feeding *H-O STEAM-COOKED CHICK FEED*.

It is packed in handy 5-pound packages, obtainable from your local grocer; or get a supply from your feed dealer.

Sample of this wonder feed free on request.

H-O STEAM-COOKED CHICK FEED

Saves the Lives of Baby Chicks

is well thought out it will be seen how undesirable it would be. Any Barred Rock breeder who can produce high-class exhibition standard cockerel bred males and standard pullet bred females will find an excellent demand for cockerel bred females and pullet bred males. These latter mentioned birds are necessary for breeding purposes, but as I have already stated a standard cannot be made for breeding birds.

"The cockerel mating is for the production of standard color exhibition cockerels and the pullet mating is for the production of standard color exhibition pullets and the two lines in the best bred flocks are being drawn nearer together in color. In reality it would be just as justifiable to divide White Leghorns into two breeds, also many other varieties of the standard into two breeds, as separate matings are used in many of these breeds, one to produce exhibition cockerels and the other to produce exhibition pullets.

"If Barred Rocks should be divided and called two breeds there would frequently be birds exhibited in the dark class as light in color as those in the light class, and there would be birds exhibited in the light class that would be as dark in color as those in the dark class, all of which would be confusing to the judge, the exhibitors and to the visitors at the shows. If the cockerel bred Barred Rocks were all very dark in color and the pullet bred Barred Rocks were all very light in color, there would be some justification in the proposition to divide the breed. However, when it becomes necessary to enlighten the visitor, either verbally or with placards on the coops, as to which birds are Light Barred Rocks and which birds are Dark Barred Rocks the argument to divide the breed loses much momentum.

"I have, from time to time, seen pictures of Barred Rocks in books and poultry papers representing light or pullet bred birds and dark or cockerel-bred birds and the colors of the different birds was so near alike that the identity could not be determined. I have witnessed standard cockerel bred males winning at various shows that were fully as light in color as some pullet bred males. I have also seen cockerel bred females winning in the cockerel bred classes and they were as light in color as some pullet bred females. All of this is very confusing and conclusive evidence that the two lines are drawing closer together in color."

Comb vs. Legs.

The shape of a Leghorn's comb is valued in the Standard at 10 points. The shape of a Leghorn's legs and toes are valued in the Standard at 2 points!

Now get this:

The height of a Leghorn's comb is not more important than the height of its legs.

Roughness of texture in comb is not more objectionable than roughness or ridges of scales on shanks.

Points or serrations on comb are not more important than the shape of toes on the feet.

Comb is a secondary sexual character. Legs and feet are the foundation on which the bird stands, giving station and balance to the body.

The Standard says: "Judges must familiarize themselves with the scale of points of each breed they are to pass upon, to intelligently award the prizes. But it must be understood that no more and no less value can be placed on any section than in the scale of points."

That means that with a valuation in the scale of points of 10 points for comb and 2 points for legs, the comb is five times as important as the legs, and must be so considered by judges and breeders. The fact is that every practical judge and breeder of Leghorns knows such a Standard is false: knows that it is not applied; knows that birds are neither bred nor judged on any 5 to 1 basis. Does the Standard need revision? A bigger and harder question is: Can the geographically selected Revision Committee give the breeders of this country what they need in the form of a Standard?

At Last—No More Mites No More Lice

One of the biggest problems that has confronted poultry raisers in the past is how they could keep their fowls free from mites and lice. Countless remedies and methods have been recommended and used, such as sprays, disinfectants, powders, etc., but all of these various things have proven only partially effective. Besides, they require a great deal of time and attention,—annoying both to the poultry raiser and his fowls.

Probably no other thing that the poultry raiser has to contend with means as much in the way of lost profits through reduced egg production, hindered growth, quality of meat, etc., as these blood-sucking, profit-reducing pests—mites and lice.

CORONA Mite and Lice Proof PERCH

will solve this question for you, once and for all. Mites and lice cannot live where Corona perches are used. Mites feed on the fowls while they are on the roost, swarming over their bodies, sucking themselves full of blood, then go back to some secluded crack or crevice to await the next meal. That's where the Corona Perch gets them. The minute lice or mites crawl under a Corona Perch they are "a goner." Corona Perches have a galvanized trough underneath filled with oil. This oil soaks up through the wood so that the underneath part of the roost is always moist with oil,—sure death to mites and lice. The oil is poured into the reservoir through an opening in the top of perch; 30 minutes a year is all the time or labor required to keep roosts filled with oil—just a few minutes two or three times a year—that's all, and the question of lice and mites will not trouble you in the least, because you won't have any. Hundreds of poultry raisers who are using these Perches tell us that it is impossible to find a single mite or louse in their poultry houses. Rev. Morgan Peters says: "I have had Corona Perches installed in my chicken coop after I had given up all hope of ever becoming master of this vermin. These Perches brought immediate relief to my flock and death to the last mite. It truly does the work while chickens are enjoying their night's rest."

Corona Perches come in standard lengths, five feet long. They can be installed in any poultry house. They are very inexpensive, and pay for themselves over and over the first season. They will last a life time, as there is nothing about them to wear out or get out of order.

Write for Free Book and Prices

Fill out and mail coupon today. Tell us how many fowls you have and we will send you our lowest price on Perches needed for your flock. We will also send you a book describing Corona Perches in detail. This book is also filled with much other valuable information for poultry raisers. Don't delay,—whether you have a dozen fowls or a thousand, you cannot afford to be without Corona Perches. They pay for themselves in a few weeks. If they don't completely rid your fowls of mites and lice, you get your money back. We also manufacture Corona Wool Fat Compound for horses and cows, and Corona Balm for household use—products that are well known throughout United States and Canada.

CURRENT NOTES AND COMMENT

Judging in Connecticut.

Those who note our little reference to "utility" in the report of the National Poultry Show, this issue, will be interested in the following foreword from the premium list of the Connecticut State Poultry Show, which exhibition was held in Hartford the last week of January:

"The committee representing the organized poultry interests of Connecticut in the management of this show, believes that standard requirements of breed-type and color and the characteristics that indicate production, can, and should be combined in the same individuals.

"It is felt that inasmuch as the egg laying characteristic is, to a high degree, an inherited tendency, good layers of standard type and color resulting from generations of systematic, intelligent breeding, will be far more apt to transmit the quality of high production than will birds that merely indicate by physical conformation that they are qualified to lay heavily.

"This, briefly, is the 'Connecticut idea' so called, and the judges of this state show will be specifically instructed to consider conformation characteristics indicating vitality, constitution and high production, together with breed-type and color, in making their awards.

"Connecticut has, from the earliest days of American poultry history, been consistently a leader in the advancement of poultry interests, and it is felt that by thus emphasizing the desirability of a more perfect union of breed-type and color with production characteristics, we, as Connecticut poultrymen, are upholding and 'carrying on' the traditions of the state by contributing something worth while to the educational value of poultry exhibitions."

The above statement is significant of a trend that is so plain that everyone should understand. The day is passing when thin bodied birds, coarse faces, narrow legs or slow feathering will be tolerated. Every quality of vigor and productiveness must be considered by fanciers. On the other hand, rough utility birds are going to go down before the onslaught of purebred birds that combine beauty and utility. Read again the above instructions, third paragraph of quotation. They are the "specific instructions" at the Connecticut State Show.

We have never favored "utility classes." We opposed the proposition of the Committee of Forty to provide two additional production classes, one for hens, the other for pullets. We favor maintaining the standard exhibition bird as the highest type of beauty and utility, and any improvement in judging or any improved system of selection and mating that will contribute to the betterment of the standard exhibition bird shall have our whole-hearted support always.

Our Cover.

The heads on our cover this month are those of Light Brahmas. The head and neck are two of the most characteristic features of the Brahma.

The skull should be broad, the crown projecting over the eyes. A fine boned head, in which you can see the eyes in looking down from the top, is a poor Brahma head. The skull projections over the eyes are termed in modern parlance, "broody bumps." It is true that a fine boned skull with pop eyes is typical of the heavy laying birds, but the Brahma is first of all a meat breed, being the largest of all recognized breeds of chickens.

The Brahma comb is known as a Pea comb. That is, a triple comb, resembling three small single combs that are joined at the base and rear.

The Brahma neck should be moderately long, and well arched, with an abundant flow-

Chas. A. Cyphers

HATCH 'EM

IN A

Buffalo Incubator

the "Perfect Hatcher"

Save yourself the trouble and disappointment of poor hatches this season by using BUFFALO INCUBATORS—the machines that, because of their dependability, have become known as the "perfect hatcher." Whether you want a small or large capacity machine there is a BUFFALO that will exactly meet your requirements—furnished in 60, 120, 240 or 260 egg sizes.

The BUFFALO is the perfect hatcher because it has the two things necessary to successful incubation—diffusive heat and correct ventilation, producing that mellow warmth found only in BUFFALO INCUBATORS. The constant and uniform heat in this "perfect" machine is accomplished by my patented sensitive and accurate regulator. The regulator was patented by me in 1895 and has never been equaled—my later improvements have increased its efficiency and ease of operation.

The BUFFALO is built of materials that insure years and years of service—it will not swell or warp out of shape—it is constructed under my personal supervision and built according to specifications that years of continued service have proven correct. We have hundreds of testimonials like the following: Dec. 31, 1921. I have just bought another No. 3 Buffalo which makes me seven in all. It certainly is a wonderful hatcher. Roy G. Downs, Richland, N. J. Jan. 3, 1921. Please ship FOUR No. 3 Buffalos and four Brooder Stoves. You will remember that I bought a No. 2 Buffalo and a Brooder Stove last year. Lafayette Felker, Rochester, N. H. Dec. 3, 1921. My two Buffalo Incubators give better results than any others that I have used or seen. S. T. Butler, Warren, Ark.

After you have hatched your chicks in a BUFFALO INCUBATOR you can further insure your profits if you

REAR 'EM

In a Buffalo "Never Out"

The BUFFALO "NEVER OUT" Oil Burning Canopy Brooder is Wickless—it burns kerosene, with a perfect blue flame. It is odorless—does not emit fumes or smoke—will not carbonize—will not overflow—will not go out as long as there is oil in the reservoir. Requires the least possible attention and the cost of operation is very low.

The NEVER OUT OIL BURNER is in a class by itself—you can depend on it day in and day out—you need never worry lest your chicks will burn up or freeze—they are safe with a "NEVER OUT."

NEVER OUT will not flood because the inverted fount holds the oil supply below the rim of the burner well, and the throttle valve free from excess pressure, operates with a large orifice and is placed under the canopy where the oil is kept at even temperature and the flow is steady and sure.

The DEFLECTOR is an integral part of the NEVER OUT Burner—it spreads and radiates the heat to the outer edge of the canopy instead of holding it, a hot ball in the middle. That's why the NEVER OUT consumes all unburnt gases—either with

low or full flame. This spreader is specially designed for hover work and will be covered by letters patent.

A 52 in. canopy is used for economy in operation. With this large canopy a greater space is adequately heated than the same quantity of oil would warm, under a 32 or 42 in. hover. The NEVER OUT is economical for 50 chicks, 500 chicks or more. The oil consumption is very economical—it ranges from one quart of oil to one gallon in 24 hours—depending on size of flame needed under varying weather conditions—the simple double adjustment give it a wide range of flexibility.

Send your name and address and get free catalog describing in detail the many superior features of BUFFALO equipment. You'll find this season a profitable one if you decide to Hatch 'Em and Rear 'Em with BUFFALO equipment.

Station B, Buffalo, New York

Amateur Poultryman Lowers Chick Mortality

The poultry industry owes much to the constructive work of enthusiastic amateurs. Some of the most skillful breeders of noted prize winners have been men who raised chickens for a hobby. An amateur has given the poultry world a brooder so simple and inexpensive as to be within reach of the veriest novice, so efficient as to deserve a place in the plant of the professional poultryman.

For some fifteen years, Mr. I. Putnam, of Elmira, N. Y., has been spending his spare hours with his chickens. He soon found out that it is much easier to hatch chickens than it is to raise them, and being of an inventive turn, he set about devising a brooder that would fully meet the requirements of the chicks yet be within reach of the backyarder.

The result is the Home-Made PUTNAM Brooder—a marvel of simplicity. The materials required are these:

One box about 16 in. wide, 10 in. deep and 32 in. long; one-sixth yard of table oilcloth; a few nails and tacks; one Putnam Brooder Heater.

The entire cost of the brooder including the heating unit should be less than \$5. And the work can be done by any handy man or boy in an hour with only a hammer and saw to work with.

This home-made Putnam Brooder can be made in a single evening. It accommodates from 35 to 60 chicks.

This little Brooder will care for from 35 to 60 chicks. A brood of this size will naturally do much better than a large flock.

The Brooder Heater is the heart of the Putnam Brooder. It operates on the principle of the open fireplace, drawing out the foul air and constantly supplying fresh air. A reflector throws the heat downward upon the chick's backs just as it comes from the mother hen. The oil tank becomes slightly warmed from the burner so that the floor of the brooder is kept warm and dry, but never hot.

The labor of caring for the brooder is reduced to the lowest terms. The heater needs filling but once a week. And the hover can be instantly lifted out for cleaning and disinfecting.

The home-made PUTNAM Brooder can be operated anywhere—in a sunny room, in an open shed, or, if a roof be built upon it, right out of doors. A half-grown boy or slight woman can carry it anywhere.

It was to be expected that such an economical and practical brooder would win popularity with the backyarder. As a matter-of-fact, however, many professional poultrymen are among its most enthusiastic users. They find that there is actually less work in caring for 500 chicks divided into ten broods than in caring for a single flock of 500 chicks as usually handled. And the mortality is much lower.

Mr. Putnam sells only the Brooder Heater. But with every Heater is packed full instructions for making the complete Home-Made Putnam Brooder. The price of the Brooder Heater is \$4.75, postpaid, and it is guaranteed to give complete satisfaction. Address I. Putnam, Route 205-R. See Mr. Putnam's advertisements in this issue.—Advertisement.

ing hackle. Of course, the neck feathers in the females are shorter and rounder than in the male, but even in this sex a skimpy neck is not desired.

An important feature of the neck is a broad feather. The lower neck feather of a female that measures an inch in width is none too wide. A wide feather means a wide webbing which carries a wide black stripe. This black should be full of life, lustrous greenish-black, and a dull black devoid of sheen is an indication of plain breeding or plain rearing. The white lacing of the neck feather should extend around the point of the feather. If the black runs to the tip of the feather, the defect is sometimes termed "smutty," or may be designated as a black shawl around lower neck. The lacing and striping is also found in the neck feathers under the throat in highest class birds.

Orpington Type.

Breeders have been enthusiastic about the massive Orpingtons, free from excessive fluff, that have been winning in the major shows this year.

England, the home of the Orpington, insists on Cochinating the breed, and the Poultry World, London, prints the accompanying caricature.

The Cochinated Orpington of England.

American breeders are pursuing the sound policy of not breeding for excessive softness and profusion of feather. As a result of practical ideals, the Orpingtons are increasing in popularity. Never have larger or better classes or Buffs and Whites been shown than this year.

Buff Orpingtons at Syracuse in the fall, and at the Coliseum, Boston and the National poultry shows have formed the strongest classes ever penned at these great events. Now comes word of four hundred White Orpingtons cooped at the annual meet of the American White Orpington Club, held in conjunction with the Cleveland show, Jan. 2 to 7, 1922. Writing of this splendid exhibition of the variety, J. I. Lyle, secretary of the club, says:

"The class of White Orpingtons was undoubtedly the greatest ever assembled in this country in quality as well as numbers. All of one section of the hall was filled with these beautiful birds. One hundred and seventy-three birds in the singles, and forty-six pens, a total of four hundred and three birds. The birds came from the four corners of the country. Rhode Island on the east, Iowa on the west, Ontario on the north and the Ohio River on the south.

"There were twenty-two exhibitors, and the ribbons were split up among eleven, with J. S. Greenshields and Jill Farm each taking two firsts, Robert Christie and Robadel Farm one each. Best display was won by J. S. Greenshields, with Robadel Farm second and Jill Farm third.

"Judges Oke and Drevendstedt gave universal satisfaction, and never was there better sportsmanship shown than among the exhibitors who had a lot of good-natured and wholesome fun with each other during the judging."

Arrested Again.

The Kansas City Times recently carried the following news item:

"Baby Chick Game Lures Him. H. H. Mason, arrested fifth time, charged with misuse of mails. H. H. Mason isn't a myth. Nor is the baby chick industry a flame. Yet Mason has been arrested five times on charges of using the mails to defraud in connection with the baby chick game.

"He and Earl H. Bowles were arrested Wednesday after postoffice inspectors decided the Bowles Hatchery Company of Independence, Mo., did not intend to play fair with

their chicken raising customers. J. M. Donaldson and W. L. Noah, the inspectors, had been watching the company for three weeks.

"Mason was in trouble last spring with the National Chick Company. Its affairs were placed in the hands of a receiver and have not been liquidated. Through a missing asset, Noah and Donaldson traced the Bowles Hatchery Company to Mason. Mason kept his mailing lists. The new company sent circulars to all of Mason's old customers, many of whom never have been reimbursed for their previous losses. Donaldson saw Mason's hand in the style of the circular.

"Bowles and Mason were arraigned yesterday afternoon before George D. Beardsley, United States commissioner. Both entered pleas of not guilty. Mason's bond was fixed at \$3,500 and Bowles's bond at \$2,500. Preliminary hearing was set for January 19."

We carried the ad of the Bowles Hatchery Company, Box 79, Independence, Mo., on page 78 of the January issue. That ad does not appear in this issue, neither will it appear in any subsequent issue of American Poultry Journal. If we had had any intimation that H. H. Mason was connected with the Bowles Hatchery Company, no amount of money would have bought advertising in these columns for that company. In the March, 1921, number of this Journal we gave a history of H. H. Mason, beginning with the term of one and a half years that he served in the Federal penitentiary, Atlanta, Ga., after indictment for fraudulent use of the mails. Following this, in the spring of 1920, said Mason, operating under the name of Quality Chick Company, Des Moines, Ia., took in about \$14,000 for chicks, but shipments of chicks were not made. We warn our readers against sending money for chicks to the Bowles Hatchery Company of Independence, Missouri.

Mason was able to operate as the Bowles Hatching Company, being out on an appeal bond, having seen sentenced to 18 months in the penitentiary for operating the Quality Chick Company at Des Moines. He has also been arrested in connection with the National Chick Company of Kansas City, and this case is scheduled to come up in April of this year.

White in Face.

In revising the Standard for Mediterraneans the general disqualification for white in face should be more carefully defined.

A good white lobe often lets its color leak over the edges of the face. Many a bird has been disqualified for this.

Is it actual white in face? Observing breeders will tell you that what actually develops into white in the face of cocks is the white which starts under the eye, not on the edge of the face near the lobes.

Thank You, Mr. McClure.

It behooves every poultry keeper to get the best results possible out of what he puts into his hens in the form of feed, care and housing. During the next few years we will hear a great deal about costs and selling prices. Yet, after all, production will ever remain the fundamental problem with every one engaged as a producer. Right here is where a poultry paper devoted to the problems of production is most helpful.

We are highly gratified with those letters from subscribers that tell us of the help American Poultry Journal is to them in teaching them to increase the efficiency of their hens. In this connection we take the liberty of quoting the following letter on the effect of the monthly visits of this Journal:

"As it is nearing the yuletide and the Christmas spirit has us in its grasp, and causes us to think of the great things that have been accomplished in the year that is about to pass, and the much greater things that will be accomplished in the year that is to be ushered in within the next few days, I cannot help but write you and tell you of the wonderful help I have received from your great publication.

"About one year ago I took the poultry fever. I began buying White Leghorns until I had accumulated quite a flock. Having been reared in a city, I had never acquired

(Continued on page 182)

BARKER'S

SPECIAL

Poultry Remedy

First, remember this isn't a food. It's a Remedy—and when mixed with the food makes that food medicinal. It has never failed to help poultry—tonic, appetizer and stimulator—and so sure are we of this that we sell it to you with an absolute money-back guarantee. Cartons, 20c, 30c, 60c; pails, \$1.75 to \$3.00; bags, \$1.35, \$2.80, \$5.50, \$10.

BARKER'S ANIMAL TONIC

We've had 70 years' experience with Horses, Cattle, Hogs and Sheep. Naturally, we know the sort of medicine they need. Barker's Animal Tonic is that medicine—and it never fails to give results; it is guaranteed to do the work asked of it. A big package for 60 cents; bags, \$1.00, \$2.50, \$3.75 and \$7.00; pails, \$1.50 and \$2.70.

BARKER'S NERVE AND BONE LINIMENT

Just as good for the man as it is for the beast. Never be without a bottle in the house. A splendid remedy for sprains, bruises, pains of rheumatism, chilblains, stiff and weak joints, chafes, galls, wounds, cuts, etc. Low priced, 35 cents a bottle.

BARKER'S ROUP REMEDY

This is one of the Barker stand-bys—a fine remedy for many, many years. Better today than ever. Price 30 cents.

The Key to Success

RELIABLE equipment is the key to success in chick raising.

That reliability cannot be determined from the claims of manufacturers. Its only proof is in the experience of users.

Squarely upon this experience rests the standing of Buckeye Incubators and Brooders. In the hands of a million users in all parts of the world Buckeye Poultry Raising Equipment has made good. Ask the Buckeye user -- he knows!

Fitness is Demonstrated

The accomplishments of this equipment rest upon the demonstrated fitness of Buckeye Incubators to hatch every hatchable egg and of Buckeye Brooders to raise the largest number of chicks.

More than that, the chicks hatched in Buckeye Incubators are superior chicks -- big, sturdy healthful little fellows, marked by vitality and quick growth, because they were hatched in ideal conditions of automatically regulated heat and moisture.

This applies with equal force to the product of the 65 egg incubator or the 10,368 egg Mammoth and all the convenient sizes between.

Revolutionized Brooding

All that Buckeye Incubators have done for hatching, Buckeye Brooders do for raising. Literally, they make three chicks grow where one grew before, reduce the labor to a fourth and cut the expenses to half.

in Poultry Raising

These Brooders have revolutionized chick raising, entirely removing the great mortality that made brooding so hazardous, and raising every chick, barring accidents, to quick, profitable maturity.

Buckeye Brooders are coal burning or oil burning in the colony sizes; lamp-heated in the smaller units.

With Buckeye Poultry Raising Equipment comes success. Experiment after experiment may fail, but absolute reliance may be placed on Buckeye Equipment.

Profit By These Facts

Those familiar with Buckeye Equipment accept these facts and profit thereby. Others may establish the same security by calling upon any one of the 10,000 Buckeye dealers in all parts of the world or by writing to any of our offices for the illustrated catalog, which tells the reasons for Buckeye superiority. Get that catalog. If interested in brooding ask for our new booklet, "The Revolution in Chick Raising." Ask the Buckeye users. Then you, too, will place your poultry raising upon the sound basis of success by using Buckeye Incubators and Brooders.

TRAP NESTS

Of Neimann Make Are Best

Galvanized Iron Nests are positively sanitary and in purchasing such a nest you are rendering yourself a service that will pay for itself in a short time.

Why run the risk of having your birds become infested with lice and mites when you can buy a galvanized trap nest that is positive proof against parasites? The same is true of every Niemann product.

Our products are all made substantially of galvanized iron, are easily taken apart and packed for removal and the prices at which we sell them make their purchase the most economical way of securing fixtures.

WRITE TODAY for Catalog showing prices of these attractive poultry fixtures.

the least knowledge of poultry. I was in a quandry and to save my life, I did not know what to do. I consulted my wife and she advised me to obtain the best literature available, so I ordered your paper the next day. We have read every article in every issue since and I want to say to you that we have by far the best flock of poultry in this immediate section. It has all been built up by the aid of your paper. My information in regard to everything, such as houses, feeding, incubation, brooding, culling and marketing eggs, has all been gleaned from your paper. If I did not see it in your paper, I would get in touch with one of your correspondents.

"Right here let me make especial mention of Alfred B. Garner. I read his articles in the Journal and they were most practical. If I was to go out of the poultry business I would continue to take your paper. I think it is one of the best publications in the country and do not think for a moment that I say this for the reason that it is about the only paper I read. I take two other poultry journals, two dailies and most of the leading farm papers. So you can see that I should know where I get my most valuable information. Wishing you a merry Christmas and a happy New Year, I am, yours sincerely, J. A. McClure."

No nation ever produced a great literature in profusion that did not number among its population appreciative readers. A cheap demand pulls down aspiration. Effort is largely modified and directed by the circumstances and conditions that surround it. Therefore, we thank you, Mr. McClure, for your letter of appreciation. It came as a New Year's message to cheer us on our way.

Fitting and Conditioning.

We are in receipt of the following communication:

"It occurred to me that I should exhibit this year at the local shows some of the varieties in which I have taken an interest in the past forty years, for they are unusual and, to my taste, beautiful. The premium lists were sent me, and the restriction of one show was 'birds shall be exhibited in their natural condition.' Then it scheduled a certain well-known judge to handle the classes. He recommends the pulling of disqualifying feathers before showing and the pulling of down on the feet of clean legged birds. I wrote the secretary of the show about it, and he stated that he was less particular in these disqualifying matters than this judge. So it would seem that the man who can get away with pulling feathers can get a premium over an honest man who exhibits his birds in their natural condition. So what is the premium worth?"

A great deal of effort, time and again, has been earnestly spent in meetings of the A. P. A. to solve this question.

The experiment was tried of making stubbs a disqualification and down a defect. The 1910 standard specified this distinction. Confusion and worse criticism than before resulted, judges and breeders disagreeing on what was "down" and what was a "stub." If a bird was disqualified, the breeder might say that the feather was down and not a stub. If the bird was placed, some other breeder showing in the class might object on the ground that the bird should be disqualified for a stub.

The way out seems to be to disqualify for both stubs and down, and let every breeder carefully look over the sanks and toes of his birds and pull the down. He cannot pull a stub because it will leave a hole, and this unmistakable indication of a stub having been pulled would disqualify.

When it comes to pulling feathers, the same difficulty is encountered. Nature sometimes makes a mistake and puts in an off colored feather in the back or breast. A clever fitter pulls that feather. No one misses it; no judge knows how many feathers there are in the back of a chicken, and he cannot tell when one is gone. Why not, therefore, put all exhibitors on the same basis, telling them what is fitting and what is faking, so that the amateur may compete with the professional? Such was the purpose of the Committee of

\$100 For Complete Fountain and Feeder for Chicks

Don't use up fruit jars. Send for a Keipper fountain and feeder. Made of galvanized iron. Easy to keep clean, and so low in price that no up-to-date poultry raiser need be without them.

EGGS

Forty in recommending to the Standard Revision Committee the following rules:

"It shall not be considered faking:

"1. To pull occasional undesirable feathers in any variety, except sickle, main tail, primary or secondary feathers.

"The committee decided that it was faking:

"1. When sickles or main tail feathers were obviously bent or broken down.

"2. When saddle feathers were obviously crimped or broken back.

"3. When there is evidence of artificial coloring of lobes, faces, beaks, toes, shanks or plumage.

"4. When white is removed from red lobes or red faces.

"5. When red in a white face or ear lobe is colored or removed.

"6. When there is evidence of an alteration to cover a disqualification.

"7. When a feather formation is pulled that leaves a hole or evidence of same in the shank or toe.

"8. When any white bird has gone through any process or treatment which leaves the skin in an irritated state or inflamed condition, or leaves the feathers brittle, or destroys the natural life and appearance of the feathers.

"9. When any colored or parti-colored bird has been dyed, or subjected to any process which has resulted in evidently deepening the tone of the plumage color, or evidently altering, softening or intensifying the shade and tone of the plumage color, it shall be considered faked. The appearance and condition of the plumage shall be sufficient evidence to justify the action of the judge.

"10. Singeing feathers is faking.

"11. Dyeing feathers is faking.

"12. Using artificial color on any part or parts of the bird is faking.

"13. Cutting, trimming, fixing or mutilating any section of the bird is faking."

Score Card Judging.

At the banquet of the veteran fanciers at Boston, some one referred to the younger generation "as amateurs." Dan J. Lambert replied: "That is what they are to us, but let us not forget that someday they will be sitting her taking our places at this banquet of veterans. It is for us to leave something worth while to be remembered by. When I urge the score card, some say that I am championing a dead issue. I feel that the issue is not a dead one."

Mr. Lambert feels that every exhibitor at a show should get some kind of a written report on each bird. He suggests a simplified score card and abridged report, such as was used at the seventh annual South Kingstown and Narragansett Poultry Association's show. This card was a shipping tag, 3x6 inches, with the exhibitor's name and address, variety, sex and coop number on one side. On the reverse side was the following:

Data
 Type (40)
 Color (40)
 Size (10)
 Condition (10)
 Score
 Judge

A tag is hung on the coop of each bird. In judging the bird, the judge writes under "type" something like this "pinched tail, 5." Under color he may write, "light flights, 5; creamy, 3." Under size he writes, "immature, 2." Condition is marked "O. K." This makes 15 outs, giving the bird a score of 85. The judge then signs the card. Thus the exhibitor has some kind of a record of what the judge thought of his bird. He is not completely in the dark. On the other hand, the judge has not undertaken to make a detailed score of the bird.

That the system has value is unquestionable. As an English publication recently stated: "The value of the score card comes in this way. The judge has left the show, the owner of a competing bird arrives. His bird is not in the money. He cannot tell why, and no one else can tell him. Had the judge been there he would have explained how

Lectro-hatch

ELECTRIC BROODER

**No work. No worries. No crowding.
 No fumes. No hot or cold spots.**

Electric heat in your brooder does away with all filling of lamps, trimming wicks, shoveling coal or carrying out ashes.

There are no fumes, no smoke. Your chicks breathe fresh, pure air all the time.

And it is so easy, so simple for you. Connect the Lectro-hatch Brooder to any electric light socket and turn an adjusting nut until the thermometer shows just the temperature you want. Then your worries are over.

Night or day, the temperature in your brooder never changes, but holds steady and even, right where you set it. That means no ups and downs in temperature—no frozen or roasted chicks.

What's more, the heat is uniform in all parts of the brooder. There are no hot spots and no cold spots. Chicks don't have to crowd together and trample each other to keep warm.

Big, Strong Chicks

Pure air, unchanging heat, and no crowding will prevent a big part of your usual chick losses. And every chick will be healthier and will develop more rapidly. You will have more and better fowls.

Costs no more than burning oil, and

usually less. But, oh, what an enormous difference in size and vigor of the chicks, in cleanliness, in safety, ease, convenience and peace of mind. Operates from any electric current—from farm lighting plant, traction line or town lighting system.

Strongly built of galvanized iron, with wool felt curtain. 500-chick size, \$23.50; 150-chick size, \$16. Order from this, or write for any information desired. When ordering tell us the voltage of your electric current.

Hatch With Electricity!

Lectro-hatch Electric Incubators have the same advantages of pure air and steady, even heat without bother or watching. You get bigger hatches of better chicks. Day-old electric hatched chicks have the appearance of being a week old. We also furnish electric heating elements for converting old incubators into electrics. Easily installed at small cost. Write for full information.

It's What You Raise That Counts

It's Not What You HATCH!

The loss of little chicks, as most poultrymen know, is enormous; ranging from 25% to 75% of almost all hatches. Most of these losses are preventable, if you feed for the first eight weeks

Conkey's Buttermilk Starting Feed

The digestive organs of a little chick are extremely sensitive, and the least disorder quickly results in disease and death. Conkey's Buttermilk Starting Feed is an appetizing combination, scientifically proportioned, of pure sweet grain and concentrated sanitary Buttermilk. The lactic acid of buttermilk strengthens and tones up the sensitive digestive organs of the little chicks and helps prevent White Diarrhea.

Conkey's is different. We use Semi-Liquid Buttermilk only. It's the original Conkey process that makes chicks thrive so wonderfully on it. After 8 weeks, feed Conkey's Buttermilk Growing Mash. Any feed that is sold for both starting chicks and growing them beyond the first 8 weeks is unscientific and unsafe.

Be sure to get Conkey's Remedies and Feeds in the original packages. Sold by dealers everywhere. Big Poultry Book sent free. [64]

The G. E. CONKEY CO., Poultry Feed Specialists, 6531 Broadway, Cleveland, O.

Fall and Winter Eggs Produced At 15c Per Dozen With Help of "SUCCESSFUL" Grain Sprouter

Feed Sprouted Oats Easily—quickly—cleanly—economically produced in "Successful" Sectional Metal Grain Sprouter. Get greater fertility in winter laid eggs—earlier chicks. Make three bushels of tempting egg-making feed from one bushel of oats, wheat or rye—increase the egg yield at least 50 per cent—and at same time save one-third feeding cost. and where the particular exhibit failed, but, having departed, he cannot. If he has scored all the birds the cards are there to give testimony as to his opinion of one and all. The exhibitor, who is a late comer, can at least compare his card with those of other competitors. He may not agree with the scoring, but he will know the opinion of the judge and his reasons."

Thos. F. Rigg Will Run Again.

Thos F. Rigg, President of the American Poultry Association, is a candidate for reelection to this office. In announcing his candidacy, he says:

"I ask for the continued kind consideration and fair treatment by the members of the Association, which will give me the opportunity to carry to conclusion the policies which I have inaugurated for the benefit of standard-bred poultry and the poultry industry in its entirety.

"Thanking the members for the hearty support they have given me in my efforts to further the interests of the Association and the cause for which it stands, I am, with very kind regards, respectfully yours, Thos. F. Rigg.

O. R. Ernst, Waverly, Iowa, also announces himself as a candidate for this office. Mr. Ernst has a wide personal acquaintance, especially among the breeders of Reds and Leghorns.

It is evident that Mr. Rigg will poll practically a solid eastern vote. Following the recent action of the states of New York, Pennsylvania and New Jersey in endorsing his candidacy, the New England branch of the A. P. A. adopted the following resolution at its annual meeting during the Boston show:

"Whereas, the policies outlined and started by President Rigg can best be carried through under his administration, therefore,

"Be it Resolved, That Zone No. 1, consisting of Maine, New Hampshire, Rhode Island, Vermont, Connecticut, Massachusetts, of the American Poultry Association approve and endorse the renomination and election of Thomas F. Rigg as President of the American Poultry Association."

Mr. Ernst will receive a heavy vote from the states of Indiana, Illinois and Missouri, but the western vote will be split, as indicated by the unanimous vote at the meeting of the Minnesota branch of the American Poultry Association, held during the St. Paul show, which vote endorsed Mr. Rigg.

Both Messrs. Rigg and Ernst have the welfare of the purebred breeders at heart. However, some of Mr. Ernst's best friends have said to him that he was running in the wrong year, because the preponderance of opinion favors the re-election of the present officer, namely, Thos. F. Rigg.

White Campines.

A breeder of "White Campines" did not like the remark published recently in these columns to the effect that we did not know any reason for the existence of this variety. He advises that he has one pullet that "laid at 3½ months and was apparently mature," and that he has produced the slate shanks and beak and black eyes of the Campine, but has "not bred for the rounded saddle feather." In other words, his males have the long, pointed saddle feather of the White Leghorn. The peculiar saddle feather of the standard American Silver Campine is a breed characteristic, and long, pointed saddle feathers disqualify a Silver Campine. If you are going to produce a white variety of this breed, it should be typical. It is a mistake to apply an established breed name to a new variety that is deficient in the distinctive character of the breed.

Utility alone is never a justification for sacrificing breed character. As a writer in "Poultry," Australia, recently said:

"Suppose one admits that usefulness is the be-all and end-all of the domestic fowl, the utilitarian should—to be consistent—dispose of his stock merely as layers, and not as purebred birds. The moment he begins to advertise them as Leghorns, or other breed, at enhanced prices, he is taking upon himself a certain responsibility. He must be con-

MR. C. A. ASH, Litchfield, Mich., got 109 chicks from 109 eggs with a Porter SOFT-HEAT Incubator on her first trial. Roy Klavine, Geneseo, Ill., got 100 chicks from 100 eggs. "Better than hens," says A. Koons, So. Coffeyville, Okla., who got 240 sturdy chicks from 260 untested eggs. "Hatched every fertile egg," says C. F. Crease, State Line, Miss. "All hatched without invalids or cripples," writes G. R. Hollenbeck,

Rozell, Kan. It's no trick to make \$50 to \$150 a month with the dependable Porter Incubator.

Hundreds of users in every part of the country report hatches of 90 to 100% plump, perfect chicks with the SOFT-HEAT Tubeless, greatest improvement ever made. They succeed because Soft Heat is moist heat—life-giving, natural warmth—instead of the dead, dry, baking heat used in other hatchers. You, too, can decrease your losses and increase your profits—hatch more and stronger chicks and make more money with less effort by replacing hens and dead-heat incubators with

The Porter SOFT-HEAT Incubator

Warmth and Moisture

Moisture is necessary to life. U. S. Government says moist air in an incubator means bigger hatches and stronger, healthier chicks. The SOFT-HEAT automatically supplies the needed moisture by its patented air moistener—duplicates Nature's process exactly and hatches every good egg.

Hatches More and Stronger Chicks

Soft Heat does not dry out the eggs. They retain the elements needed for the chick's complete development. The result is sturdy, perfect chicks. And, instead of dead, dry air, laden with poisonous gases, they breathe and thrive in pure, moist air from the very first.

Tubeless, Gasless, Smokeless

No gas, smoke or bad odor ever is found in the Porter. Nothing but the purest of moist air ever reaches eggs or chicks through the SOFT-HEAT'S automatic ventilating system. The PORTER'S patented full radiator plate eliminates cumbersome, unsatisfactory tubes and pipes.

Center Heat—Round Egg Chamber

Steady, soft heat, just like the hen's; radiated from above, just as the hen supplies it; in a round egg chamber, just like the hen's nest, makes the Porter Tubeless a true mechanical hen. Every egg is heated evenly every second—no matter how cold the weather.

No Suffocation—No Cripples

Dry-air incubation is a mild form of baking. It makes the shells hard, the inner membranes tough. Chicks can't pierce them. Suffocation results. The moist, soft heat of the Porter keeps shells brittle and inner membranes tender. Every chick that develops breaks through easily at the right time. Being strong and healthy, all chicks hatched the Porter way develop more rapidly, and make you more money. The Porter hatches no cripples.

Saves 300% One filling of the Porter's fuel tank—less than a gallon of oil—completes a hatch. Other incubators burn 4 to 5 gallons and the lamp must be filled daily. The SOFT-HEAT saves 300% in money, time and trouble.

Only Two Minutes' Care Daily

Eggs in the Porter can be turned in two minutes without removing or lifting tray. A child can operate the Porter. Hundreds of inexperienced users tell of getting 90 to 100 per cent hatches at their first trial.

All Controls Are Automatic

The control of moisture, heat and ventilation in the Porter is entirely automatic—safe and exact at all times, regardless of altitude or weather. The SOFT-HEAT requires less attention than any other incubator made.

Increase Your POULTRY PROFITS Turn every good egg into a plump, perfect chick that will grow quickly into money. Cut out the losses from crippling, suffocation and "scrubs". Produce more and better chicks with less labor and expense. You can do it with the SOFT-HEAT Incubator. Every Porter is backed by an Ironclad Guarantee.

No Experience Necessary Even if you never have used an incubator, you can succeed with the automatic Porter from the very first. Simplest incubator made. Our complete book of instructions makes it easy to get big hatches. No guess work—no trouble. **We Ship By PREPAID EXPRESS**

FREE! Read This Book Contains 64 pages, fully illustrated. Explains wonderful SOFT-HEAT System in detail. Shows you how to make poultry raising really profitable. Gives letters from SOFT-HEAT users, telling of amazing success. Be progressive! Investigate the new way—the natural way of incubation! Send name TODAY—a post card will do—for FREE copy of this big book.

PORTER INCUBATOR CO., 50 Porter Bldg., Blair, Nebr.

The Magic Brooder

The Wonder of Wonders

No person can ever realize the efficiency of this brooder until they try it.

Many people think "a brooder is a brooder" and one should be as good as another. A brooder that will not hold the fire nor maintain an even temperature will not do the work properly.

The Magic is built to do the work. It is equipped with both top and bottom draft regulation,

also coal magazine and gas escape system. The ash pans are made of galvanized steel and will not rust out. The deflectors are lock seamed and riveted. In fact, everything about the Magic brooder is quality from start to finish. They need attention only twice a day and will brood chicks at a profit. Without a reliable brooder it is impossible to succeed. Money refunded after thirty days' trial, including freight if the Magic brooder does not do all we claim. Send for free catalog describing same, together with plans for colony and laying houses.

UNITED BROODER CO., 348 Pennington Ave., Trenton, N. J.

Market your Eggs in Neat, Compact and Safe Self-Locking Egg Cartons

A big help in getting highest prices for your good eggs.

BETTER THAN GREEN FOOD

Turn the feed into eggs instead of all fertilizer and get eggs all the time even when they moult. Dissolve Wacker's B. T. G. F. Tablets in all water they get to drink. 5 hens laid 226 eggs from July 1 to October 31, while they were moulting and are still laying, feed cost 4 months \$5; eggs sold for \$16; 26 were sold for hatching. No meat scraps or green foods are needed when using these tablets. Did you ever try Wacker's Roup tablets; they will not fail you. Wacker's tablets will produce results or your money back. 600 TABLETS, \$1; 1300, \$2; 5000, \$6. C. O. D. orders promptly filled. WACKER REMEDY CO., Box 157-22, CAMDEN, N. J.

HANSEN'S RUSSIAN ORLOFFS

Undeclared Champions of America. Still stand supreme, winning at the Chicago Coliseum, 1921, 1-2-3 Cocks, 1-2-3 Hens, 1-2 cockerel, 1-2-3-5 Pullet. This win at one of the World's Greatest Shows with the records made in the National and American Egg Laying Contests proves the worth of these great Cold Weather Fowls. My new 1922 booklet describing the Orloff mailed free on request. Am now booking egg orders for spring delivery.

DR. M. A. HANSEN, IMPORTER AND BREEDER, OSAGE, IOWA.

siderate of race characteristics (type) at mating time, otherwise there cannot ultimately be any limit to what he may or may not sell under the name of Leghorn or other breed.

"Just think, apart from any aesthetic consideration, what a field is opened to the dealer unless more consideration is paid to the upholding of type by utility breeders. There would be absolutely nothing to prevent the most unholly scarecrows being palmed off on the unwary as purebred record-breakers. No, the preservation of type is of extreme importance to all of us, fancier and utilitarian alike."

White Leghorn Standard.

The White Leghorn Club asks for suggestions on how to make the best possible standard for the variety.

First, link the wattles with the comb, instead of with the ear lobes, as the size and texture of the wattles, as they develop in a growing bird, are an index of comb development and comb texture.

Second, in the matter of weight, the tendency is toward breeding birds that have good substance of body. Short bodied cockerels, with legs like pencils, cannot compete in the strong classes put down at the major shows. The man who continues to breed small Leghorns is going to be relegated to a position in the rear. It has been true in all the smaller breeds of dairy cattle that the tendency has been toward more size. Look at Hillview's birds at the Coliseum and then set your weights.

Third, in the matter of comb, it is not the most important shape section of the bird, yet the standard scale of points makes it out to be. It is a sexual character that serves as a barometer to indicate the physical condition of the bird. A small comb and a concave back do not make a Leghorn, not by about a mile and a half. Put more emphasis on the length and position of the legs, the shoulders, the furnish of back and tail, the under line of the bird, and substance of body. The day of cockerels winning because they have a nice comb and a concave back, when their bodies are not long enough to reach out to the end of their wing points, is passing.

Corn Acreage

The Illinois Agricultural Association has passed a resolution favoring a fifteen per cent reduction in corn acreage, this reduction to be apportioned among the counties of Illinois.

New Superintendent

Frank E. Latham, who has been working with White Plymouth Rocks for twenty years, has accepted the position of superintendent of Sabrina Farm, and this establishment has added a fine line of White Rocks, as the awards at the Boston show demonstrate.

Elected Mayor.

John S. Martin, well known breeder of White Wyandottes, has been elected Reeve (or Mayor) of his home city of Port Dover, Ontario, and also a member of the County Council.

Increase in Express Rates

R. S. Wheler, assistant traffic manager, American Railway Express Company, has assured President Rigg of the American Poultry Association that he will not file a schedule with the Interstate Commerce Commission until he has conferred with Mr. Rigg. Mr. Wheeler has submitted to Mr. Rigg a tentative proposal and this will be the basis of discussion by the two gentlemen when they confer.

Thos. F. Rigg Selected

President Warren G. Harding has appointed Thos. F. Rigg a member of the Agricultural Committee meeting in Washington January 22. Mr. Rigg will represent poultry interests. The committee is to make recommendations on the welfare of agricultural producers in general.

\$309⁵⁹ PROFIT *From 60 Hens in* 7 MONTHS

**"The Ful-O-Pep Way
Makes Poultry Pay"**

At An Expense Of Only \$63.85

The Quaker Oats Company,

Attention: Mr. Albert Angell, Jr.

Dear Sir: "After taking your course and expert advice on feeding and housing I am sending you photographs and estimates on what I have done from the first of January to the first of August on 60 laying hens under your directions, Sc. Black Minorcas, Rhode Island Reds, White Leghorns. Thanking you for past advice, and I owe all my success to the Ful-O-Pep feeds and yourself.

This record was made in seven months with 60 laying hens.

January 1, 1921—August 1, 1921—Expenses \$63.85. Eggs sold at fancy prices 2897, profits \$309.59."

Yours truly,

HARRY W. McKNIGHT,
718 Toledano Street,
New Orleans, La.

Free Correspondence Poultry Course

The above letter received by us from Harry McKnight tells in a "nutshell" the benefits that thousands of poultry raisers are deriving from our Free Correspondence Poultry Course. This complete Poultry Course of 50 lessons is written and directed by our Poultry Expert, Albert Angell, Jr. It treats on and fully covers every poultry problem from A to Z. These lessons will enable anyone—the experienced as well as the beginner to make more profit from their flock. This valuable course is

FREE to Any Ful-O-Pep Customer

To secure this Poultry Course Free, simply go to your dealer—hand him the coupon in this advertisement, properly filled out and give him your order for Ful-O-Pep Dry Mash, Growing Mash or Chick Feed, just your regular order, same quantity as you

are accustomed to buy. Your dealer will sign the coupon, you will mail it to us, and we will send you your first lesson with text and list of questions for you to answer, and so on until you have received the entire course of more than 50 lessons. This service is free only to those who use Ful-O-Pep Feeds.

Don't miss this opportunity of securing this helpful service free. Our Poultry Expert, Albert Angell, Jr., has devoted his whole life to mastering the poultry business. He has helped thousands to succeed. He will help you. Go to your dealer—start now to take advantage of one of the biggest opportunities ever offered to poultry raisers.

FUL-O-PEP for Eggs

Our Customer's Remarkable Records
tell the Story of **FUL-O-PEP** Success

Ful-O-Pep raised Orpingtons.
Hatched September 15, 1919.
Began laying February 7th.
Raised by W. E. Reed, Mel-
rose Park, Ill.

C. E. Gordy of Delmar,
Delaware, increased egg
production over 100 per
cent with Ful-O-Pep
Dry Mash.

White Rock
Hen—"Silver
Belle" laid 254
eggs in 10
months, 25
day. Ful-O-
Pep raised by
J. A. Carodios-
key, Lewiston,
Penna.

4,000 Ful-O-Pep White
Leghorn layers. Hilltop
Poultry Farm, Suffield,
Conn.

Ful-O-Pep raised
Leghorn Pullets—
laid first egg at
age of 2 months
and 23 days—11
eggs in 12 days.
Raised by George
Dickey, Rock Is-
land, Ill.

Hatched April 18th—began
laying September 17th. Raised
the Ful-O-Pep Way by W. E.
Holls, Ft. Wadsworth Sta-
tion, S. I., N. Y.

A. H. Nuttcombe of Charlotte,
Va., got 1,113 eggs from 13
Ful-O-Pep hens from Jan. 1st to
July 1st.

What Users Say About The FUL-O-PEP Way

I never had hens thrive as mine are doing on Ful-O-Pep Dry Mash. I am getting 75 per cent egg yield right through the cold weather.

(Signed) L. L. Crone,
Lexington, Mass.

The Quaker Oats Co.,
Chicago, Ill.

Dear Sirs: Your new Ful-O-Pep Calendar is a joy. I don't see how we could get along without it. We are guided by the information and advice it contains, daily. We had 30 pullets that began to lay last November and December. We have fed them Ful-O-Pep and of course, they have done their part. We have hatched out 100 chicks this spring and have lost only four.

Sincerely,
Mrs. L. A. Herndone,
Jacksonville, Fla.

The Quaker Oats Co.

Gentlemen: Since I have been using Ful-O-Pep and Dry Mash Ful-O-Pep Scratch Grains and Growing Mash for 6 months, I have received better results than I ever did before. It certainly is the right feed for poultry. My chickens are doing better and I am getting more eggs than I ever did before. I can hardly express my thoughts to you in regard to this wonderful feed of yours. Also since I have found that it is such a wonderful bone, muscle and egg producer, I have recommended it to the highest to everybody that has chickens in my neighborhood.

Sincerely yours,
J. T. McGinty,
5700 E. 34th St. Terrace,
Kansas City, Mo.

The Quaker Oats Co.,
Chicago, Ill.

Gentlemen: I am using your feed as prescribed by you, for a Back-lotter and meeting with grand success. I was at the Florida State Fair and one of your representatives gave me a book on your goods, and I started then and I am doing good. I can't say too much for Ful-O-Pep.

Very truly yours,
Geo. A. Shultz,
Jacksonville, Fla.

The Quaker Oats Co.,
Chicago, Ill.

Dear Sirs: I find your poultry course more interesting with each succeeding lesson.

I have hatched 2,500 purebred S. C. Rhode Island Red chicks this year and raised them the Ful-O-Pep Way. Pullets hatched February 14th began laying August 4th and look like old hens in size.

Wishing you every success.
Very truly yours,
Mrs. Earl J. Battles,
Baraboo, Wis.

Pittsburgh's Successful Show.

As announced earlier in the season, the Pittsburgh show paid first prize money whether there was one bird in the class or more, thus encouraging the entry of specimens of many of the older and less commonly bred varieties. A. H. Emch, who judged at Pittsburgh, tells us that the plan worked out admirably, that the result was an especially well-balanced show and that the management of the show is much pleased with the way the system worked. The result was some wonderful quality in Black, Silver and Golden Spangled Hamburgs; some fine Silver Dorkings, and the public was much interested in these beautiful varieties. Said Mr. Emch: "The Reds, White Wyandottes and Buff Leghorns were extra good. There was a strong class of Black Minorcas, with Andrew Mellon, Secretary of the Treasury, showing under his farm name of Rolling Rock Farm. Hill-dorfer, of course, exhibited. The attendance was up to Pittsburgh's old Standard, with a line in front of the ticket office that extended out to the street."

R. J. Jolly sends the following report:

The Eleventh Annual Poultry Exhibition was held in Motor Square Garden, Jan. 9 to 14, and it was the most successful show ever staged by the Pittsburgh Association. Entries exceeded last year's number by 250 birds. The management, with J. Leonard Pfeuffer, as secretary, worked hard and everything went like clockwork. Large crowds turned out all the week.

The largest classes were the White Leghorns, Buff Leghorns, Barred Rocks, R. I. Reds, Black Minorcas, White Orpingtons and Light Brahmas, and competition was keen in these classes, but the judges got through their work in good time, and gave general satisfaction in most classes. I heard some exhibitors who were dissatisfied in some of the classes they exhibited in. However, as the show was held in the basement of the building, and required the electric lights burning all the time, which was a handicap to the judges in some of the varieties, therefore it was easy to make some mistakes.

The following is a report of the principal classes, most of which contained good quality birds, and competition was keen all through.

Barred Plymouth Rocks, 75 single entries and 10 pens and contained a lot of good birds, but, same as at Chicago Coliseum show, many of the male birds were not finished out in hackles and tails and plenty of chick feathers not molted out. As Judge Krimer said: "It makes it hard to judge a class of birds in this condition." Exhibition cocks, 10—First, a good strong bird in good condition; second, good type and barring, fails shape to win. Third, fourth and fifth, all fair, good birds. Cockerels, 21—A grand class: First, a nice, clean-barred cockerel, with good shape and type; second, close up, similar sort of bird; third and fourth, two nice sharp-colored cockerels, good finish; fifth, good quality, little narrow in body. Coop 27; a grand cockerel would have about won but had ship wings which threw him out. Hens, 8—First, second, both good barred and typed hens, being fit; third also a good at around closeup; fourth and fifth, fair hens. Pullets, 18—Another good class, winner real good, all around wins; second, nice distinct barring, good shape, close up; third, fourth and fifth, all good ones.

White Rocks were fairly good. The first cockerel and pullet standing out in the bunch.

Must make special mention of the Golden Laced Rocks, 16 altogether in competition, grand lacing and good in type for this new variety. The first and second cockerels and first and second pullets all excelled in color and shape. Silver Laced Rocks were also good in quality and color.

Partridge Rocks just a fair lot.

White Wyandottes, 38 singles and 4 pens. The winners were all first-class quality, shape and color. A well-known firm about cleaned up in all the classes and they have the goods. Rest of the Wyandotte varieties contained some good birds, especially the winners. Silvers, Buffs and Partridges.

In the Single and Rose Comb Reds it was hot competition, 72 entries in all. Single Comb first cock stood out, also first hen. Cockerels were a strong class, first a grand colored, good shaped bird; second, third, two good ones close up; fourth and fifth, not

Putnam Home Made Brooder

Costs Only
\$4.96

with Brooder Heater
In Successful Use for Years

YOU can make a better brooder than you can buy. A 14-year-old boy can do it in an hour with no tools but saw and hammer. Your brooder complete with Putnam Brooder Heater, ready to receive the baby chicks, need not cost you more than \$4.96.

This home-made brooder will care for from 25 to 60 chicks. You can make as many brooders as your plant demands. Naturally, chicks do better in small flocks.

The Putnam Brooder can be operated anywhere—in the house, in an open shed, or a roof can be provided and the brooder set out of doors. The hover is so constructed that the chicks find the exact temperature they need. The hover can be adjusted to suit any season, February to July.

The Putnam Brooder Heater is constructed on the principle of an open fire-place. It carries out the foul air and draws in fresh, invigorating air, providing continuous ventilation. Heat is radiated *from above* upon the backs of the chicks, just as with the mother hen.

The Brooder Heater is made of brass and heavily galvanized iron. It is practically indestructible.

The Putnam Home-Made Brooder is easy to clean. You simply lift out the hover and the heater. The floor of the Brooder is even with the ground; the chicks have no steps or inclines to learn. They don't get lost or cold.

The heater holds one quart of oil and burns ten days without refilling or trimming; needs no other attention. Every other brooder must be filled and trimmed every day.

HOW TO ORDER

I sell the Putnam Brooder Heater only. The price is \$4.75. Within every Brooder Heater are easy-to-follow directions for making the Home-Made Brooder. Your dealer should have the Putnam Brooder Heater in stock. Ask him for it. If

he doesn't have it, send me \$4.75 each for as many as you need. I will ship postpaid. In ordering please give dealer's name.

GUARANTEE

I guarantee the Putnam Brooder Heater to give satisfaction or it may be returned in good order within thirty days and the money paid for it will be refunded.

Plans for building Brooder and testimonials from satisfied users sent free on request.

SURE HATCHES

The Two-Circuit Hot Water Heating System, illustrated in the circle below, gives the 103-Degree Incubator a feature never before equalled. Secures perfect circulation. Always a constant flow of hot water to ALL parts of egg chamber, keeping temperature the same throughout. No chilled eggs or uneven hatching.

Patented Heating System an Exclusive Feature

Found only in the 103-Degree. The real perfected Heating system at last, not just a claim—the only heating system with hot water uniformly hot all around the cabinet—explains why 103-Degree owners are the biggest boosters you ever met.

Wonderful Patented Tilting Chimney

—positively automatic and sure to protect eggs against either rise or fall of temperature. No loss from chilled or roasted eggs, or weakened chicks. You can bank on amazingly big, strong hatches of healthy chicks with this wonderful incubator. Let us SHOW you. Write for descriptive literature giving full information. Thousands of users get real hatching profits with the 103-Degree. They'll tell you. 6 sizes, 60 to 1200 egg capacity. Write TODAY.

103-DEGREE INCUBATOR CO.
CROWN POINT, IND. BOX 150

Two-Circuit Hot Water Heating System

Has No Equal Gets Bigger Hatches of Livable Chicks

quite so rich in color as the others in front. Pullets, 14—First, grand type and color; second, nice pullet, very fit; third, long body, fair color; fourth and fifth, fails in shape to be winners.

White Leghorns were the largest classes in the show, and the winners were real quality, type and color, with the awards well placed. Grand cock was first. Also first cockerel extra good. Buff Leghorns were also good, with first cock, first, second and third cockerels and first pullet, all birds fit to win in the strongest competition.

S. C. Black Minorcas were extra strong classes, and it was a near thing in picking first and second winners in cockerels and pullets; for myself I preferred second cockerel to win, a grand bird all over and a real Minorca type, rich sheen and the best of comb and lobes; just not quite finished in back.

The first cock was also a gem of the first water and fit to win in any company. First, second and third hens were a grand team. First best of the lot. First pullet was also a real good one and others close up.

Anconas were good in numbers and think most of the males were far too dark in color and markings. Females were better.

Orpingtons contained some good Buffs and Blacks, but entries poor. White were good classes, both in quality and numbers. First cock fairly good bird, but preferred second to win, grand type and color. First hen best of the lot; second and third class also good ones; first cockerel was a grand all around bird and fit. Second good bird, but fails in condition to winner. Pullets, first, second and third, were a good lot, not much between them.

Light Brahma classes contained some of the best I have seen in any show of this variety. The prize winners will be hard to beat at any show in the best of competition. Hamburgs were also good classes and nice quality.

Langshan classes, Blacks contained a lot of grand birds of the best quality; special mention of first cock, hen and cockerel, but preferred second pullet to beat the winner.

Waterfowl and turkeys were a good display.

Bantams numbered around 100 entries and some nice birds in Modern Games, English Games and Buff Cochins.

National Poultry Show.

"The best quality ever cooped at the National," was the general verdict of judges and breeders who attended the poultry show in the Amphitheatre at the Stock Yards in Chicago, January 11 to 17, 1922.

As one entered the hall, he passed a display pen containing a White Leghorn hen owned by Funk Farms. Mr. Lyle Funk, proprietor, stated that this bird had laid 234 eggs in her pullet year, 1914. "In seven years she has laid 1,046 eggs, laying 27 eggs last June. At our request Mr. Funk weighed this hen. She weighed 4 lbs., 13 oz., indicating a weight of about 5 lbs. when she was younger and in her prime. There is little question but what the tendency is toward larger Leghorns, just as the tendency in the lighter breeds of dairy cattle is toward heavier cows. What a 5 lbs. White Leghorn hen "can do" in seven years is evidence too tangible to be side-stepped.

The classification started with Barred Rocks. First cockerel went to John McPherson, as usual. His birds this year were not as well finished as he has won on some other years. His best finished cockerel won fourth. Second cockerel was the Irvine bird that went unplaced at the Coliseum. He was a little over-ripe for the National, but had breadth of back, well finished tail, good station and length of body, and clean color. Third, another beautiful cockerel, well finished, good size, clean color; shown by Chas. E. Popham. Mr. Popham also won first cockerel bred pen, headed by another well finished, clean-cut cockerel. A pullet in this pen was sold, by request, to the Michigan Agricultural College for \$35. She had a smooth face, bright eye and a big barrel, and the representative of the College said that she would be trap-nested, and his guess was that she would go 260 eggs or a little better. She did not have a round,

"LADY BEAUTIFUL"

Pullet Line Only

Barred Plymouth Rocks

Lady Beautiful birds won at Chicago Coliseum, Dec., 1921: 1-2 exhibition hens; 5th exhibition pullet; 1-5 pullet-bred cock; 2-3 pullet-bred cockerel. At Baltimore, same week, in a grand class of Barred Rocks, the best that Baltimore has ever had, as follows: 1-2-3-4 exhibition hens; 1-2-3-5 exhibition pullets; 1-2 pullet-bred cocks; 1-2 pullet-bred cockerels. STOCK—Always some choice pullet-bred males for disposal to the discriminating purchaser.

stubby feather. Victor Bradley remarked to us at Boston: "The rather longer feather of the cockerel bred line seems to suit the egg-breeders best," or words to that effect.

There are wonderful chickens in Barred Plymouth Rocks, wonderful possibilities in this breed, and the future is sure to see real chickens encouraged by all judges and breeders.

In White Rocks, Halbach was the principal winner. When one placed his thumb on the hip bones of Halbach's 1st, 2nd or 3d pullets, and his index finger on the end of the keel bone just behind the drum stick, he spanned a big barrel. The abdomen was also big, and its size was not secured by a short keel. Wm. Halbach is carrying out the precept of his late father, who foretold that the future would demand a combination of size, production capacity and breed quality. These pullets measured up to this standard of usefulness and beauty.

Buff Rocks show improvement, with 1st and 2nd cockerels a strong pair.

A big class of Partridge Rocks, judged by Joe Dagle, and after he had placed his awards and Tucker had placed the awards on the Partridge Wyandotte, they compared birds and found the same color winning.

A small entry of Silver and Gold Wyandottes, with some nice quality, particularly in Golden.

White Wyandottes formed a strong section of the show. First cock, well finished, little heavy in fluff. First cockerel, an especially attractive bird and one that brought forth considerable favorable comment. First and second pullets good, and with 1st hen form a smooth feathered trio.

Partridge Wyandottes, one of the largest and best classes shown to date. First cock, more of the color that has made the Mitchell Partridge Cochins famous. First cockerel, about the color of a good Brown Leghorn male. This cherry red color is about what the breeders like. It is not dark, neither is it light, but in cocks the judge could not find a bird of this color that did not have some black at base of hackle. First hen, a big well-shaped, beautifully penciled female. First, 2nd and third pullets of the same breeding, and combining substantial size, good Wyandotte type and the beautiful brownish red color clearly penciled with black.

S. C. Rhode Island Reds totaled 164, one of the largest and strongest classes in the west this year. The 1st cock was a big, long-bodied bird, well supported by strong legs, with a low, well furnished tail of glossy green color. He is decidedly the best cock that has been shown in the west. First hen and 1st pullet were what many judges and breeders term "bright red," but they were not as dark as usually win in the major shows. Owen Farm's 2nd hen, 2nd pullet and Laak's 4th pullet were commented on most favorably by some breeders who prefer the darker color. Mr. Delano's line was outstanding for its large size and fullness of body, combined with noticeable length of body. The exhibit created a most favorable impression among breeders and judges. Mr. Delano spent the week at the show, meeting many old friends and making many new friends. The long, horizontal bodies and good size of his birds will long be remembered by those who saw them. Too many western breeders have lost sight of type. Several were anxious to buy the rich colored, long bodied, 8 lb. hen on which he won 2nd prize.

Columbian Plym. Rocks were the best class of the year so far. Some attractive birds in both light Brahmas and Black Langshans.

White Leghorns a big class. Harry Wolf-sieffer of New Jersey placed the awards here. Glen A. Wilson was the principal winner.

Black Minorcas a strong class, with 1st cockerel and 1st hen remarkably choice specimens. This class was well handled by Judge A. H. Emch.

Buff Orpingtons brought forth a surprise. Mr. Black entered a string that greatly excelled his effort of last year, and his farm, Bonnie Brae, had 70 birds under ribbons, out of a total of 70 shown. Here was size, furnish of plumage, true buff color and Orpington type. The entry was one of the attractions of the show and puts Mr. Black in the forefront as a breeder of the variety.

Any man or woman who KNOWS HOW to raise poultry RIGHT can make Big Profits, and we can show you how by following our GUARANTEED methods. What others are doing, YOU can do: it is only a matter of knowing how. We can show you just as successfully as we are showing hundreds of others. Do the right thing at the right time and results are certain. We KNOW FROM EXPERIENCE.

LET US SHOW YOU HOW

To start right.

To Get Big Egg Yields in Winter.

To Properly Mate Your Birds.

To Hatch Every Fertile Egg.

To Raise Strong, Vigorous Chicks.

To Use Artificial Light Successfully.

To Properly Feed and Manage Growing Stock and Layers.

To Prevent Dead Chicks in Shell.

To Prevent White Diarrhea.

To Prevent Chicks Crowding.

To Cull the Non-Producers.

To Build Poultry Houses and Equipment.

To Make Back Yard Poultry Pay.

The Arrow Points the Way

Positive Proof

BIG PROFITS

Averaged 191 Eggs

J. W. Ainsly, New York, writes "I am following your methods very closely with most excellent results. For instance, one of my flocks of 125 pullets averaged me 191 eggs per fowl for the year."

READ THIS: 888 EGGS

from 65 HENS in 23 DAYS

Brady Chance, Oklahoma, just wrote saying, "By following your valuable instructions, my flock of 65 hens laid 888 eggs in 23 days. At two poultry shows recently my birds won in strong competition five first prizes, three second prizes and three third prizes. This was made possible by following your methods."

A WEALTH OF POULTRY FACTS

Our Big, New, FREE Book, "HOW TO RAISE POULTRY FOR PROFIT" has helped hundreds upon hundreds to learn WHY there is big money in poultry. Think of the unlimited demand for eggs and poultry meat, the vast market for day-old chicks, eggs for hatching, breeding stock, capons, broilers, etc., etc.

The PROFIT from poultry has paid the mortgage on many homes. Aside from the profit in managing your own poultry plant, the poultry industry offers many good positions. The demand for competent poultry men and women is increasing every day—salaries ranging from \$2,500 up.

BE A POULTRY FARM MANAGER; a poultry supply salesman; a manager of a commercial hatchery; a poultry feed specialist; a breeder of fine stock; or a poultry judge. Read all about these wonderful openings in our free book.

BE ALIVE! Get the Facts! Reach out for the SUCCESS that is yours merely for the seeking. You CAN make money from poultry, and our new FREE book, "How to Raise Poultry for Profit," will point the way.

This is the only Commercial Poultry Service Institution of its kind which has received the endorsement and recommendation of 27 of the leading Agricultural Colleges and Universities. THERE IS A REASON.

Send for FREE Book Now

WRITE TODAY for your copy of the BIG NEW FREE book. A postal will do—but do it immediately as the supply is limited. This is your BIG OPPORTUNITY. Don't miss it. Take the first firm step on the road to SUCCESS—for success will surely be YOURS if you follow the advice given to you in this remarkable book. Do it NOW!

WHY FEED CRY-S-CO.
99% PURE CARBONATE OF LIME.
TEN REASONS

1. BECAUSE it increases the egg yield considerably, therefore **Your Profits**.
2. BECAUSE it contains **99% Pure Carbonate of Lime** which makes the shells—hard shells which means less loss in shipping.
3. BECAUSE it contains pure silicate grit, giving the hen finer plumage, and being cubical in form a perfect grinder, thereby insuring digestion of the food.
4. BECAUSE in **Cry-s-co** you have a perfect shell producer and grit combined, far superior to oyster shells and ordinary grit.
5. BECAUSE it means economy, as **Cry-s-co** goes half as far again as shells, as there is no waste, and you need no additional grit.
6. BECAUSE it promotes digestion, keeping the hens healthy, and in a great measure prevents egg eating.
7. BECAUSE it costs no more than ordinary shell or grit.
8. BECAUSE it has the hearty endorsement of many of the most prominent fanciers and poultry raisers in the U. S. Men who know. (Original letters on file.)
9. BECAUSE you are raising chickens for the results, and not for the pleasure only of seeing them around or the work there is in it.
10. BECAUSE as a wide-awake poultry raiser you want better results and in **Cry-s-co** you will find them. Let us prove it to you.

Therefore—buy a sack from your dealer to-day, but **LOOK for the TRADE MARK** on a white sack, or write us for **FREE SAMPLE** and booklet.

W.A. NEUSITZ CO.
ST. LOUIS, MO.
Dept. A, 3848 Connecticut Street

Another strong class of White Orpingtons, with 138 birds entered. Mrs. Harnly's exhibit arrived too late for the judging. Some errors appear in the marked catalog and we understand Mr. Gensch is the principal winner. Edgar T. Alden put down a nice pen of young stock.

In Bronze Turkeys, Mrs. Eli Fowler was the principal winner on birds of superior size, penciling and bronze color. The class was large and strong.

D. E. Hale, secretary, and Dr. R. H. MacKenzie, president of this show association, were daily "on the job" attending to the details of management and looking out for the comfort and pleasure of exhibitors. The light in this show hall is unsurpassed, the natural color of the birds showing off to splendid advantage. The Stock Yards Inn, where so much history has been made among purebred breeders, is adjacent to the hall and contributes to the comfort of visiting exhibitors.—F. L. Platt.

Profit From Hens.

By T. S. Townsley.

During the trying times of the past year the farmer has realized probably more forcibly than ever before the importance of poultry as a sideline on the general farm. The statement, often repeated and never satisfactorily contradicted, that the poultry flock given reasonably good care paid a larger return on the investment than any other kind of live stock kept on the farm has been forcibly impressed on the farmer's mind during the past few months. Many farmers state frankly that the poultry flock was the only part of the farm enterprise which made a profit during 1921, and quite a number have confided that had it not been for the income from poultry and eggs they could not have weathered the financial storm during the past year. The hen has long been recognized as a hard times friend, and is most appreciated in those years when other crops are not so profitable. On many farms the poultry flock is used more or less as a safeguard to counterbalance losses in other departments of farm activity. Thus, on the western plains when the wheat crop fails, more attention is paid to poultry, and in some of the fruit growing sections when the frost nips the fruit buds a larger number of chickens are raised than when the apple crop promises a large return. One distinct advantage of poultry as a sideline is the fact that it is a crop which never fails. No matter how dry the summer, how hot the winds or how wet the spring may be, the old hen can be counted on to do her part by laying eggs and furnishing a regular income to the farm.

Because the returns from the poultry flock are ordinarily distributed throughout the entire year, many farmers do not appreciate the part which the hens play in the general economics of the farm. Fortunately for the poultry industry an increasing number of farm flock owners are keeping definite records and these records are showing results that are rapidly increasing the respect given the hens in the minds of many farmers. For the year ending November 1, 1921, 168 farm flock owners scattered throughout the state of Missouri co-operated with the Missouri Agricultural Extension Service by sending in each month a complete record on the poultry farm, showing the income from the flock and cost of feed for the month. These farm flocks were fairly

ROUP?

You know the signs—face swollen, running at eyes and nose, comb pale, whistle or sneeze when breathing—breath with catarrhal odor—that's Roup.

Stop It Quick with Conkey's Roup Remedy in the Drinking Water

Chickens doctor themselves. It kills the Roup germs and saves the fowl. Equally important as a preventive, for it keeps Roup from getting a start. Sold by dealers everywhere.

Conkey's Poultry Tonic

Keeps Hens Healthy—Gets Winter Eggs

It is a Regulator, Laying Tonic, Moulting Powder and Chick Conditioner of the highest type. No cayenne pepper—no filler. It pays to buy it by the pail.

Conkey's Poultry Book is well worth 50 cents to anyone who keeps chickens. Sent for 5 cents in stamps.

64 BREEDS Most Profitable chickens, ducks, turkeys and geese. Choice, pure-bred, northern raised. Fowls, eggs, incubators at reduced prices. America's great poultry farm. 29th year. Valuable new 100-page book & catalog free. R. F. NEUBERT Co., Box 910 Muskegon, Mich.

typical of the flocks on the better managed farms throughout the state and the results secured are representative of what any well managed flock ought to return. A summary of the records from these 168 farms shows that an average of 144 hens were kept on each farm and that these hens laid an average of 125 eggs apiece. These eggs sold at an average of 29 cents a dozen, making an income of \$436.23 from eggs alone for the average farm. Since these were fairly typical farms, they raised a considerable number of chicks during the year and had some fowls for sale. The income from fowls sold for the average of these 168 farms was \$192.25, making a total income from poultry to each farm of \$628.48. A rather careful report of the feed used on each farm was kept and a compilation of the records from 168 farms shows that it required \$213.61 worth of feed to maintain the flock on the average of these farms. Deducting this feed cost from the total income leaves a profit over feed cost of \$414.87 for each farm, or a return above feed of \$2.88 for each hen kept. While it is not fair to claim that this \$414.87 represents that much clear profit to each farm because no allowance is made for interest on the investment or depreciation of buildings and equipment, still a comparison of these returns over actual feed cost with the income secured from some other farm products indicates that poultry stands out in a class by itself from the standpoint of profit for the current year. At the price corn and wheat are selling for on the local markets throughout Missouri, at least 30 acres of good corn or 20 acres of excellent wheat would be necessary to bring as much cash income as was left from these poultry flocks after all expense for feed was paid. A comparison of other live stock at current prices with the poultry flock shows that at least twenty-five 200-pound hogs would have to be sold to bring as much gross income as the 144 hens showed profit above feed cost, and at least five 1,000-pound steers would be necessary to bring as much gross income as the average farm flock of hens produced net over the feed cost.

The comparative returns of the poultry flock commonly taken care of by the farm women with the results from the corn, wheat, hogs and cattle produced by the man have been rather forcibly impressed upon the male side of the farming population by the fact that the women have had most of the ready cash on the farm during the past year. On thousands of farms the poultry flock is held in higher esteem at the present time than ever before, and as a result of this new interest on the part of the man in the poultry keeping activities many improvements are being noted in housing conditions and general management practices. Reports from one township in Lincoln County Missouri, show that twenty-five new poultry houses have been built there during the past summer and fall. Dealers in various parts of the state report an unusual demand for poultry mash materials, and county agricultural agents say that there has been an unprecedented demand for high-grade breeding stock from farm flock owners. This unusual interest in the farm poultry flock, which has been stimulated by the favorable showing the

Who Made and Put on the Market the First Wickless Oil Heated Open Burner Colony HOVER

Documentary Evidence Is Most Dependable Here Is Our Answer

The buying public is not so much interested in controversies relating to patents or prior discoveries as it is in the merit of the article, what it stands for, and what it really does by way of actual achievements and substantial results. Our advertising policy has always been based upon the slogan "Truth in Advertising." We have always stated the facts. (See our ad on opposite page). We prefer to use our space to tell the poultrymen of America about the good points of the things we make—the products of our factory.

There are some misleading statements, however, appearing in a two-page ad in the January issue of this magazine that should not be passed unchallenged.

First, As to Patents

A very convincing statement is made by the advertiser to show that "Colony Brooders" were made and marketed before our "Blue Flame Hover." Patent numbers are quoted to prove the claim. Let us analyze these patents referred to and see how nearly they truthfully support the claim.

**The Patent Specifications are Before Us.
We are Taking Them in the Order
Printed in the Ad.**

1—Patent No. 961,654, Thermostatic Regulator for Incubator, June 14, 1910. Not used in Blue Flame Hovers.

2—Patent No. 977,973, Convertible Incubator and Brooder, Dec. 6, 1910. Irrelevant to the subject.

3—Patent No. 1,005,660, Cooker, Oct. 10, 1911. Nothing to do with the subject.

4—Patent No. 1,056,595, Fireless Cooker, March 18, 1913. Nothing to do with the subject.

5—Patent No. 1,065,850, Starting device for Engines, June 24, 1913. Vastly different.

6—Patent No. 1,128,535, Lamp heater for Incubator, Feb. 16, 1915. Assigned to Wilson Abogast, Allentown, Pa. Who has a right to it now? Not intended for Blue Flame Hovers.

7—Patent No. 1,149,959, Antirooter instrument, August 10, 1915, (to cut the snoots of hogs). A departure from the subject. Amusingly queer, isn't it?

8—Patent No. 1,262,397, Incubator, April 9, 1918. Nothing to do with Blue Flame Hover.

9—Patent No. 1,273,679, Incubators, July 23, 1918. We are talking about Blue Flame Hovers. Incubators not in question.

10—Patent No. 1,280,091, Tubular Joint for heating system, Sept. 24, 1918. No bearing on the subject whatever.

11—Patent No. 1,285,428, Washing

Machines, Nov. 19, 1918. We do not advocate the brooding of chicks with washing machines.

12—Patent No. 1,373,362, Vapor Generator, March 29, 1921. No value on the Reliable Blue Flame Hover, not used.

13—Patent No. 1,392,708, Knocked down brooder canopy, Oct. 4, 1921. We do not make a knock down hover. Our hover is completely set up and antedates the patent by three years.

14—Patent No. 1,392,709, Heater for Incubators, Oct. 4, 1921. Nothing to do with our Blue Flame Hover.

15—Patent No. 134—438, Trademark for oil burners and heaters, such as employed in incubators and brooders and oil stoves, August 31, 1920. We never used the term in any advertising or literature. Rather late to apply to Blue Flame Hovers.

Rather startling, isn't it? Why list anti-rooters for cutting the snoots of hogs, Fireless Cookers, Washing Machines, Engine Starters and numerous incubator patents? Is all this "smoke" intended to cloud the atmosphere of truth and to fool the public or confuse the buyer? Then, too, we notice the illustration in the ad refers to a patent dated March 29, 1921. Why not put the patent date where it belongs, under the cut higher up, relating to vapor generators? There must be a reason. We think there is a good reason. If perchance anyone has been misled by the statements in the ad referred to, we suggest that you make an investigation of the patents listed above.

Our Advertisements Prove Our Claims. Don't Be Mis- led—Be On the Safe Side

We invite your attention to our first advertisements as follows:

Poultry Keeper, Quincy, Ill., (and others), March, 1918, page 491. Our first ad of our Blue Flame Wickless Open Burner Colony Hover.

Reliable Poultry Journal, the same date, on page 6, contains the same ad.

Poultry Keeper, Quincy, Ill., (and others), December, 1918. This ad shows our first improvement on our Blue Flame Colony Hover, page 167.

Poultry Keeper, Quincy, Ill., (and others), March, 1921, page 26, showing the three styles we had made and advertised up to that date.

This year's advertisement shows our latest and most complete Blue Flame Colony Hover. We say it is "supreme"

in workmanship, ease of operation and satisfying results. While we claim for it the most perfect of all we have yet put out, we may some time in the future find it possible to add other features of practical usefulness. We know of no way to better it at the present time; it is sure to please you—backed by our money-back guarantee.

Why should it be necessary to explain further? The buying public should judge for itself as to the accuracy of our claims and then purchase the "Original Blue Flame Colony Hover" from us. Good things are always imitated or copied. If our products were not so genuinely good, our would-be competitor would not be so disturbed. There is much more to this story that might be said in justice to all concerned; other facts might be revealed by us, but the buying public need not be concerned further than the statements herein made.

Will you now read our advertisement as it appears in this issue on the opposite page.

Consider our fair and square presentation of facts. It is safest to deal with a company that has stood the test and done business on the square for more than forty years and does not need to resort to misleading statements. We have served the public with increasing success in meeting the needs of poultrymen of America in incubators, brooders and poultry appliances. Our efforts will continue to be directed along the same lines.

My Personal Word

I feel that I should ask the pardon of my reader friends for intruding these facts upon them. It seems to me necessary. I stand ready in support of my position to make good my every claim and will back up my confidence in the justice of my position by an offer to give to any charitable institution my check for \$500.00 if it can be proven that any statement herein made is not absolutely true, or if it can be proven that we were not the first to advertise our Blue Flame Hovers previous to the time that the so-called "First Oil Burning Canopy Brooder," referred to in the ad appearing in the January issue, and to which this is my answer, was advertised or marketed.

Just one thing more, you should look up patent numbers 438,548, 515,422, 516,872, 479,747, 495,063, 515,423, 499,969, 471,399, 467,466, 479,690, 479,220, 475,401. They relate to Blue Flame Heaters all issued before 1895.

The Reliable Incubator & Brooder Company, of which I am President, and my personal interests are all centered in and concerned about rendering an acceptable service to the poultrymen of America. I invite your continued loyal support and co-operation in that direction.

J. M. Myers.

J.W. Myers, Pres.

50 to
1100
Eggs

Reliable Standard INCUBATOR

HAS EVERYTHING that a good incubator should have and nothing that it should not have. It is absolutely dependable, because best materials are used—best workmanship. It is scientifically constructed, tried and proven. Its heating system has double enclosure. Automatically regulated as to ventilation, moisture and heat. Maintains correct hatching condition in all kinds of weather. Utilizes all the heat from the lamp in two ways. For more than 41 years our double heating system has proven absolutely safe and satisfactory against the dangers of sudden chills in incubation. It maintains absolutely uniform temperature, with a constant circulation of clean, pure, fresh air. It has ample nursery space. Made in sizes for 50 to 1,100 egg capacity. Poultrymen, both large and small, testify to the good results and satisfaction obtained through the Reliable.

Reliable Standard Blue Flame Hover

Our 1922 model wickless and valveless oil heated colony hover embraces all the latest and best improvements in hover construction. From the very beginning it has been a leader. It is still farthest in the front rank. Every burner is tested and adjusted at the factory to the maximum flame. It will not overflow. It is impossible to clog up and slow down the oil flow and cause it to go out.

It is dependable

—“Reliable Because Right”

Burns ordinary kerosene or coal oil with a clear blue flame, with absolutely no fumes; no soot; no odor; no wicks to trim; no smoke. Will give a pure, clean heat necessary for the comfort and health of chicks beneath the canopy regardless of outside weather conditions. It is easily operated and insures the raising of chicks with the least work and care and at the lowest cost. These hovers are built of galvanized steel; shipped completely assembled, ready to bolt the legs to canopy. Place the heater where wanted, fill with oil, adjust burner to the heat required, and it is ready to start.

Reliable Standard Coal Burning Colony Brooder

Substantially built. With proper care will last a lifetime. Covered by our latest patents and improvements, including feed pouch which increases the coal capacity about 10 per cent. Has a four-inch collar for a four-inch flue. Burns either hard or soft coal with equal satisfaction. Ash pit door has screw draft plate that may be opened when soft coal is burned. Equipped with two double disc wafers, insuring positive, accurate and dependable heat regulation. Built of heavy gray cast iron, all parts strongly bolted together. The base is fireproof, being seven inches high, with asbestos pad attached to lower plate, with air space insuring safety. Self-cleaning; will not clog. The fire bowl is wider at the bottom than at the top, thus insuring a clean grate at all times. Radiating all the heat to the outside. The canopy throws the heat evenly to all parts. Self ventilating. Radiates pure, fresh, warm air.

The entire construction is so simple and yet so well made that it affords the greatest ease in operation with least care, giving the largest measure of satisfaction.

All Reliable Incubators, Brooders, Hovers, Poultry Appliances and Equipment

are guaranteed to give absolute satisfaction. For more than 41 years we have been in the front rank in service to the poultrymen of America and throughout the world. —We have taken more prizes in this and foreign countries—a proof of our claim of leadership. Our money-back guarantee completely covers your purchase either direct with us or through our dealers. They are everywhere.

SAFETY HATCH INCUBATOR THERMOS BOTTLE PRINCIPLE

**DOUBLE
WALLS—
DOUBLE
RESULTS!**

The SAFETY HATCH uses exclusively the Thermos Bottle principle of wall construction. Two walls of wood with wood-felt strips and vacuum air spaces between, DOUBLY PROTECT the eggs—and this often means DOUBLE RESULTS. Heat, moisture and ventilation positively maintained at hatching temperature much like a Thermos Bottle.

INSURES BIGGER BROODS

The SAFETY HATCH also has other vital features—inner glass doors that keep eggs from drying out during inspection—sanitary trays that “clean like a pantry shelf”—patented heating coil that insures constant circulation of water and even distribution of heat. Insures live, healthy chick from every fertile egg, when simple directions are followed. Thousands of satisfied users! A MONEY-MAKER for poultry raisers!

White Quill White Rocks

The 200-Egg Exhibition Strain

In the strongest competition in years at the Chicago Coliseum, December, 1921, against a line of Madison Square Garden winners my Birds won 11 regular ribbons on 15 entries, including Champion Old Pen, in the bred-to-lay class on 3 entries my Record Layers won 1st pullet, 2nd and 3rd hen.

At the Milwaukee National Show, November, 1921, in the largest class of White Rocks ever shown there on 19 entries and no pullet entry, White Quills won 13 regular ribbons, Best Display and Champion Male of the American Class, 169 cockerels in competition.

This should be convincing proof that White Quill White Rocks are topnotchers, can furnish you with very choice breeders or show birds in cocks, hens, cockerels or pullets at very reasonable prices.

Special: Exhibition bred-to-lay trios, \$15, \$25, \$35, and \$50. Pens (4 females and 1 male), \$25, \$35, \$50, and \$75. Order direct from this ad.

Book your order for Hatching Eggs and Baby Chicks now.

Adam F. Polt Dept. O. Hartford, Wis.

hens have made at a time when many lines of farm endeavor were showing a loss, is likely to result in permanent benefit to the poultry industry. There is a possibility that the hope of unusual profits from poultry will cause an over production of poultry products that will eventually result in a slump in prices, but the permanent improvement in the way of poultry houses and equipment and the improved methods of feeding and handling the flock, which many farm poultry keepers are putting into practice for the first time, will tend to make the farm poultry flock a more important factor in the farm business; and no matter what immediate reaction may come from the possibilities of too great a production the improvements in methods will eventually mean more regular profit to those flock owners who have learned to appreciate the possibilities of the farm flock.

While there is always danger of creating undue enthusiasm and causing some amateurs to draw unwarranted conclusions in publishing the phenomenal records from poultry flocks, and it certainly is much wiser for the beginner to base his estimate on averages rather than on unusual results, still it is always inspiring to the ambitious flock owner who is succeeding himself to know of the success of some other poultry keeper under somewhat similar conditions. For this reason the two following individual reports from Missouri flock owners for the year ending November 1, 1921, are cited. Flock No. 1 is owned by a man and his wife whose children are all married and the woman devotes most of her attention to the poultry flock while the man furnishes such assistance as he can find time for after taking care of the other farm duties. This farm is located near a main line railroad station, and one of the factors in making the farm successful has been the fact that a special market was secured in Kansas City for practically all of the poultry products produced. On this farm two varieties of chickens were kept—the Buff Orpingtons and the White Leghorns. The flock consisted of 130 hens of the former breed and 232 of the latter. The egg production for the year shows that the Orpington hens averaged 135 eggs each, while the Leghorns averaged 173. The income from eggs on this farm for the year amounted to \$1,781.73 and the income from fowls amounted to \$829.69, or a total income of \$2,611.42. The feed cost for the flock of 362 hens and the young stock raised amounted to \$662.23, leaving a net income over feed cost of \$1,949.19. A complete inventory of the flock at the end of the year shows that a few less birds were on hand than at the beginning of the year, and \$65.40 was charged off for decrease in stock. This farm has \$1,086.75 invested in poultry buildings and \$404.23 invested in other equipment, making a total investment when the value of the stock was added of \$1,969.38. Depreciation on the buildings and equipment was figured at \$74.54 and interest on the investment at \$118.16; \$37.50 was spent during the year for new stock and eggs, and \$213.84 was expended for miscellaneous items such as egg cases and express, leg bands and fuel for the incubators and brooders, making a total deduction from the net sales income of \$444.04 and leaving a net

Oat Sprouter \$2.49

You can make a better sprouter than you can buy. This sprouter was made in one evening by a 14 year old boy with a saw and hammer. The cost, with heater, was \$2.49. Thousands in use. All say it is the best and handiest made.

Make Layers Out of Loafers

To make hens lay their best, in winter, growing green food, rich in vitamins, must be fed. Sprouted oats are best. The Putnam Home Made Sprouter yields the best and sweetest sprouts and with the least work. I will send free, plans for making this sprouter with description of Little Putnam Stove to heat it. Also instructions for use of stove to keep fowls' drinking water unfrozen. Stove holds three pints of oil. Burns a month without trimming or filling. Patented burner. Nothing like it. Ask your dealer, or send me his name and \$2.00 and get one by return mail, postpaid. Try it. If not satisfied, return in 10 days and I'll refund \$2.00 and postage. I run all risks.

labor income of \$1,429.75 for the year, or \$3.95 for each hen kept.

Another flock consisting of Barred Rock hens under the care of an unmarried woman had an average of 185 hens which laid 160 eggs per hen. The income from eggs on this farm amounted to \$636.35 and the income from fowls sold amounted to \$525.62, making a total income of \$1,161.97. The feed cost for the flock was \$333.28, leaving a net over feed cost of \$828.69. This woman had \$300 invested in buildings and \$105 in other equipment, making the total investment in stock and equipment \$882.50. Counting interest on the investment and depreciation on the buildings and equipment deduct \$73.20 from the net income, and the record shows that she spent \$35.65 for new stock and eggs and \$42.50 for miscellaneous expenses, making a total deduction of \$151.35 from her net sales income. This leaves a labor income of \$667.34 or an average labor income of \$3.66 for each bird kept.

Eggs at 9 Cents a Dozen.

I have kept a small flock of hens for the past ten years, but they were not purebreds until this year. A year ago I decided to sell my mongrels except a few hens to set, and purchased 100 purebred Dark Brown Leghorn eggs to set under the hens I kept.

As soon as the chicks were weaned I sold the hens. This left me nothing but the purebreds. From the 100 eggs I raised 32 pullets and sold as many cockerels. Two of the pullets are not old enough to lay and two more I disposed of. The remaining 28 pullets are 6 and 7 months old. Some of them have been laying since October. During November I gathered 28 dozen eggs. This is more eggs than I ever gathered from the same number of mixed-breed hens at that time of the year. It pays to keep purebred fowls, and mine are beauties.

This is the way I care for my hens. I have not used artificial light, but intend to in the near future. I make their day as long as I can by turning them into their scratching shed at daybreak where I have scattered wheat in the litter the night previous. In a hopper I keep dry mash composed of two parts mixed wheat middling and wheat bran, one part meat scraps and one part cornmeal. In another hopper I keep crushed oyster shell. At noon I give a feed of sprouted oats, and at 4 p. m. all the corn they will pick up. In addition to this they have an abundance of water, milk and charcoal. I have found it costs no more to feed the variety of feed they need than it does to feed one or two kinds. My total feed bill for November was \$2.57. This is equivalent to a cost of about 9 cents a dozen for I received 28 dozen in November.

The scratch shed and roosting room are one building divided by a partition; and a small opening in the partition to let the hens through to the scratch shed. The house faces the south. The scratch shed has a two-foot strip of poultry netting the full length of the shed and above the wire is a row of darkened nests. Below the wire is a two foot plank to keep the wind from blowing directly on the chickens. Having the opening this low gives plenty of light on the floor.

In one corner I have built a dusting box. That I keep supplied with ashes.

DR. HESS POULTRY PAN-A-CE-A

Universally endorsed—Universally used:—by the big 10,000 hen plants—by the average farmer with his 200 hens—by the back-yarder with only a dozen hens to consume the table scraps. Pan-a-ce-a tones up the dormant egg organs, so that the proper amount of a hen's food goes to egg-making—and not all to fat, flesh and laziness. A Pan-a-ce-a hen is always a hungry hen, an industrious hen. You can depend upon it, the healthy, hungry, scratching, singing hen is the laying hen, the paying hen.

Always buy Pan-a-ce-a according to the size of your flock. Your dealer has a package to suit. Good results guaranteed.

Packages from 25c to the 100 lb. drum, \$10.00.
Except in the far West and Canada.

DR. HESS & CLARK

This box is three feet square by twelve inches deep. As we have mild winters here I do not keep the fowls confined except in freezing weather or when there is a frost or snow.

I have a burlap curtain for the opening of scratch pen to be used in stormy weather.

Missouri.

Mrs. Grover Noe.

Fowl Breeding.

By John Miller.

The art, or whatever it may be termed, of breeding fowls consists of forming a mental picture of an ideal bird which incorporates all the qualities one desires in his fowls and then selecting the specimens that are to be mated together with reference to the degree in which they possess the qualities of the ideal bird.

A vision of the ideal affords the breeder a definite object towards which to work and something with which to compare the product of each season's matings, thus to determine whether or not progress has been made, just as it gives the judge in the exhibition hall something with which to compare the competing specimens. Comparison, selection and elimination is the method by which all progress in breeding has been made, and there is no substitute for this method.

One's capacity as a breeder can easily be determined by the ability with which he selects his breeding fowls with regard to the degree in which they partake of all the qualities of the perfect visionary bird.

If a breeder is so narrow in his judgment that he can see only one or two qualities he will never succeed, for while he may, and probably will, succeed in getting those one or two qualities in a high degree of perfection, his fowls will be so lacking in all the other essentials as to be of little value.

The proneness of a large number of breeders to magnify the importance of some particular point and overlook all the others is responsible for most of the failures in the poultry industry. And it is in these instances that line-breeding or inbreeding produces its disastrous results.

The breeder who gets enthusiastic about certain sections, and concentrates his efforts on the development of these, will not see defects as they gradually come into other sections of his birds, and the continued close inbreeding of fowls in which there is a tendency to the same defects multiplies those defects to such an extent that they will finally dominate the entire flock.

It is not the intention of the writer to leave the impression that inbreeding should never be practiced, for it can be made to aid greatly in establishing desired qualities, provided it is thoroughly understood and properly practiced within reasonable bounds. But inbreeding requires that a breeder be able to see all parts of the bird, and that he possess the ability to detect tendencies to defects before the defects become so pronounced as to be the most conspicuous characteristic of his strain.

Be sure about your incubator thermometer. Have your thermometer tested by someone who has a thermometer that is known to be absolutely correct. Thermometers often get out of order.

Let The Hen Brood Your Chicks

Purchase rights to make and use Nature-Plus and say goodnight to your brooding troubles. FREE

With every one-year subscription to Woman's Weekly, we will give absolutely free the beautiful book, "Home Arts and Entertainment," 112 pages. Illustrated in color. Valuable information on every phase of domestic arts. Subscribe to Woman's Weekly for a year. After you have read it for a few weeks, you will always want it in your home. You will look forward with eagerness to each issue. The only weekly magazine for women. A complete novelette, a gripping serial story in every issue. A digest of the news that the women want to know—fashions—needlework—home dress making—recipes. It comes to your home every week, all for \$5.00 a year.

Read These Rules Carefully:

- 1 Any man, woman or child, living in America who is not an employee or related to an employee of Woman's Weekly, may submit an answer. There is no entrance fee.
- 2 All answers must be received not later than office closing time, March 20, 1922.
- 3 Write lists of words on one side of paper and number all words (1, 2, 3, etc.). Write full name and address on each page in the upper right hand corner. If you have anything else to write, use separate sheet.
- 4 Only words that appear in the English dictionary will be counted. Do not use obsolete words. Where the plural of a word is used, the singular will not be counted, and vice versa.
- 5 Words of the same spelling will be counted only once, even though used to designate different objects or articles. An object or article can be named only once.
- 6 Do not use compound words, nor words formed by the combination of two or more complete English words, where each word is in itself an object.
- 7 The answer having the largest and nearest correct list of names of visible objects and articles shown in the picture that begin with the letter "B" will be awarded first prize, etc. Neatness, style or handwriting have no bearing on the decision of prizes.
- 8 Candidates may co-operate in answering the puzzle, but only one prize will be awarded to any one household; nor will prizes be awarded to more than one of any group of persons where two or more have been working together.
- 9 If a contestant sends more than one list under the same name, or assumed name, or a pre-married name, then all lists of such contestants will be disqualified. If more than one list is sent by any group who have co-operated in the preparation of such lists, then all lists of such contestants will be disqualified.
- 10 Three independent judges, having no connection with Woman's Weekly, will judge the answers submitted and award the prizes at the end of the contest, and contestants agree to accept the decision of the judges as final and conclusive.
- 11 In case of tie for any prize offered, full amount of such prize will be awarded to each tying contestant.
- 12 All answers will receive the same consideration regardless of whether or not a subscription for Woman's Weekly is sent in.
- 13 The announcement of the winners will be printed in Woman's Weekly as soon as possible after the close of the contest.

Poultry Thrives on

Winter Root Feeds

Mangels, grown from Sutton's Imported English Seed, furnish an unexcelled green feed winter ration for poultry. Grown in America, from imported seed, Sutton's Mangels give tremendous yields. Last year—an unfavorable season—gave an acre yield of over 30 tons per acre, one grower reporting 72 tons.

Mangels are keenly relished by poultry and provide in a succulent form, the tonic properties so absolutely essential to winter vigor and the profitable production of eggs or meat. Stored compactly and are long keepers.

Write for full information on Sutton's Mangels; also English grown Rape Seed, the ideal crop for giving green feed and sun protection to growing chicks.

H.P. WINTER & CO.
64-J Wall Street, New York

The Cost of Operating a Poultry Farm.

(Continued from page 152)

overlooked or ignored on a poultry farm but they are real ones and are paid for, whether you realize it or not. They consist usually of:

- Interest on Investment.
- Depreciation on Buildings and Equipment.
- Taxes.
- Insurance.

These are fixed charges whether you run your plant to full or half capacity. I know of a farm that has a monthly overhead charge of about \$800.00 for its poultry department, with the plant running at about 40 per cent of its capacity, and the owner wondering why he is losing money.

The investment will vary greatly. In any case, whether you own the property free and clear or have a mortgage or two thereon, the investment charge should be 6% on the total sum involved. If this money were not tied up here it would be working somewhere else, either in another enterprise directly connected with you, or put in some security drawing close to 6%, and sometimes more.

Depreciation on buildings and equipment also varies. Five per cent is generally allowed for building depreciation and 10% on equipment. This in order to be able to replace our necessary "tools" in a given time without disturbing our capital, a practice followed by all business concerns.

The taxes are usually light for a poultry enterprise, but must be paid regularly or the sheriff is apt to pay us a little neighborly call some fine day.

Under insurance we should allow for personal belongings, as well as insurance on all buildings and stock, otherwise some fine frosty morning we are liable to wake up and find more roast chicken on hand than we can conveniently consume at one time, without money to pay for a new start.

Miscellaneous Costs

Under this general heading we may place whatever expenses have been unaccounted for, such as disease mortality of chicks, mature fowls, losses by accident, or any other item that cannot be strictly placed under other heads. As these costs vary from year to year, they cannot be called a fixed charge as is the overhead, so they should be under a separate heading.

Group B—Specific Costs.

A very interesting and rather puzzling question. Chicks eat so little feed for the first weeks of their life, and it increases so gradually, that it is really hard to know exactly what it has cost unless an accurate account of all feed consumed be kept. Generally as chicks are given mature rations the cost is lost sight of, because all feed is then purchased for mature and young stock together. It must be either weighed or kept entirely separately to know where you stand in the matter. From what information I can gather from reliable sources, and from my own set of figures, I believe 75 cents will raise a pullet from babyhood to maturity—that is, to six months of age. One dollar will raise a pullet to about eight months of age. This is the feed cost alone.

Save \$330
Electric light and power for Farms, Country Residences, Summer and Winter Cottages, Lumber Camps, Yachts, Motor Boats, Charging Batteries, etc.
Was \$625.00 NOW \$295.00

The labor charge is hard to know exactly. If you have hired a man for four months at \$75 per month, you may charge the chicks with the \$375.00 outlay, dividing it between the number of pullets raised. If this be 1,000, the labor cost would be 37 1-2c per pullet, forgetting about the broilers, as they should practically strike their own balance.

The overhead charged to the chicks should be the money invested in the buildings they occupy, the brooding equipment necessary for their welfare, and other expenses, such as portable fences, their share of the insurance, taxes, etc. This may amount to another \$150, or 15 cents per chick, on the basis of 1,000 raised, giving us a rough total of something over \$1.25 so far.

One farm writes me it costs them about \$1.25 to raise their chicks to the laying age.

Another large establishment thinks it costs them around \$1.50.

Still another has the idea that it costs them close to \$2.25. But as the latter is a high-grade breeding stock specialist who trapnests extensively, has small brooding units, frequently using hens for brooding purposes, his labor and other charges are naturally higher than those of the typical commercial poultryman we have in mind. I believe we are safe in allowing \$1.50 per pullet up to the time of her maturity, unless she is the heaviest breeds, when another 25 cents will cover the difference. This cost of \$1.50 will pay for the hatching egg that produced the chick, and the mortality charge. Naturally if your flock is almost wiped out some spring by disease, the pullets that are left are going to cost you far more than if a normal loss of, let us say, 25% of the chicks, is encountered. These chicks, usually dying when comparatively young, do not cost so much as if they had reached semi-maturity. I have found that a flat charge of 25 cents per chick lost usually covers this cost. If out of 3,200 chicks you lose 800, or \$200.00 worth, the charge is 20 cents each for the 1,000 mature pullets, which brings your total pullet production cost up to about \$1.50. We can easily see how this would run to \$2.00 per pullet without any exertion on our part.

Cost of Maintaining Layers.

Based upon 1,000 layers—an easy figure for basing costs—we find that under present-day conditions we should be able to feed them for \$1.75 per year each. In some parts of the country, where much free range may be enjoyed, and where grain prices are low, this may be considerably less. In other parts, where there is scanty range and little feed raised, this may be considerably more. I remember that during the peak of the high price poultry feed period during the war it cost me about \$3.50 per hen per year for feed alone. So much for that. This naturally includes everything that goes into her food upkeep, and need not be enumerated here.

The labor involved has already been outlined. If you have a man to run your establishment, his wages and "found" must be figured in, of course. If he is paid \$100 per month, gross, a labor cost of \$1.20 per hen must be charged, unless he is also able to care for all of the chicks in the spring, in which case they may carry their proportionate charge and relieve the layers of some of

not not a reserve mating on my place. You have the same opportunity I have to produce those GREAT WINNERS and LAYERS for the coming season. I have many pens, including SWEEPSTAKE MATINGS, BLUE RIBBON MATINGS, CHOICE MATINGS and FLOCK MATINGS. They are all good and I set eggs from each for my own use and offer you the same opportunity, at a price all can pay, to secure EGGS or CHICKS from matings that will produce GREAT WINNERS and HIGH EGG PRODUCERS for the 1922 season.

Hot Springs, Ark., March 15, 1921
Wm. Shands, Little Blue, Mo.

Dear Sir: Received the chicks last Sunday. They were all alive and full of "pep," certainly are a fine lot of chicks. They must have multiplied on their trip, for I received 26, but maybe you believe in good measure. I turned them over to a mother hen that I had waiting for them, and they are doing fine. Will be glad to recommend your farm to others. Respectfully yours, F. C. Pamplin, 38 Henderson Ave., Hot Springs, Ark.

St. James, Mo., January 31, 1921.

Mr. Wm. Shands, Little Blue, Mo.
My Dear Sir: The baby chicks arrived yesterday, Sunday, in fine shape. They look good to me. We have a good hover for them and they are lively this morning, scratching as though they were a week old; drink and eat good, and I don't see a runt among them. They are, I am glad to say, all that could be expected, and you can let me know when we can another one hundred. I can buy them here for \$20 per one hundred, but they do not appeal to me as being the grade that yours are, judging from the ones which I have. Thanking you for prompt service, I beg to remain, Yours truly, J. J. Forester.

Breeders of Single Comb White Leghorns
Manhasset, L. I., N. Y.

March 14, 1921.

Mr. Wm. Shands, Little Blue, Mo.
Dear Sir: A line to let you know that I received the chicks on the 11th, and on opening the box I did not find a dead one among the lot. I will recommend your square dealings to everyone, and will say, that when chicks are on the road for three days, they must be strong and vigorous. Thanking you for the extra chicks and wishing you further success, I will remain, Yours truly,
Arthur F. Allen.

Ohio, March 14, 1921.

Mr. Wm. Shands, Little Blue, Mo.
Dear Shands: The baby chicks arrived last night, about 9 o'clock, and I got them home about 10:30. There were two dead upon arrival and one died this morning. They are surely a fine looking bunch of little husky fellows and I am well pleased with them. Kindly accept my thanks for the extra chicks, and your good wishes. Wishing you success and with kindest regards, I am, Yours truly,
F. U. Fisher.

BABY CHICKS MATING LIST HATCHING EGGS

My 1922 Mating List sent on request, fully describes in detail my sensational winnings in New York, Pennsylvania, Missouri, Kansas and Texas shows during past season, also a wonderful average egg record made by 1,000 females for the six coldest months last year. Pictures of buildings, grounds, equipment and giving guarantee and prices on BREEDERS, BABY CHICKS, HATCHING EGGS.

today! —

Sheppard's "Famous" Ancona Catalog for 1922 is now ready! Thousands of brand-new copies are piled up to the ceiling of my office.

We've been working on them for weeks. Just at present we're busy putting the catalogs in envelopes. The envelopes—many of them—are already stamped. All they lack is a place to send them!

You ought to have a copy of this Catalog. I've had hundreds of people tell me that my annual Ancona Catalog is worth a dollar of anyone's money. So I'm expecting that this big mountain of free "books" will melt away before the flood of many requests.

If you're at all interested in poultry—either from the pleasure or profit standpoint, or both—I want you to have a copy. Just pencil your name and address on the envelope coupon, check the information I'd like to have, tear it out along the dotted line, and send it to me.

WECKEL BROS.

Box 391-A, R. F. D. 1, Moline, Ill.

the burden. Allow 25% of the total yearly labor charge to the chicks and you are safe. In other words, the care chicks need for the first few weeks, and then up to the time they are ready for the laying quarters, takes considerable time. Those who have "gone through the mill" know how quickly we can feed and water hens and gather eggs, but how long it takes to care for chicks properly. This must be a matter left entirely to the individual, but it is given here for thought, at least.

The overhead charge on 1,000 layers will include what we have already mentioned, as well as the depreciation on the buildings they occupy and the equipment needed for their well-being.

The miscellaneous expenses will include mortality, which runs about 10% on the average intensified commercial poultry farm, and should be charged at the market rate. Usually a fowl that dies through the laying period has paid for her keep, otherwise we would not have selected and kept her in the first place. If the average market price is \$1.75 for a carcass similar to hers, and you have lost 100 hens during the fiscal laying year, a charge of \$175.00, or divided by 1,000, comes to 17 1/2 cents per fowl.

Correlating Costs.

Now that we have run over the main items of poultry costs, let us put them in some sort of concrete, easy to read and understand form, so that we may know within reason what it really costs us to run a flock of chicks. I presume that some readers may disagree with me about these costs, but I believe that if they study the matter, not alone from their own angle entirely, but from that of country-wide conditions, they will find me to be pretty close to the existing facts.

Pullet Production Costs.

Feed75
Labor37 1/2
Overhead15
Miscellaneous25

Total.....\$1.50

Maintaining Laying Fowls.

Feed	\$1.75
Labor	1.20
Overhead25
Miscellaneous25

Total.....\$3.45

A word about these various figures. The labor charge for the chicks at 37 1/2% may seem high, but I believe it only covers what time they take. It is based as we have noted, on four months' time at \$75 per month. I would hardly trust my precious chicks to an inexperienced man, nor would I let him handle my layers while I was busy with the chicks, unless he knew his business. So the price I pay him is in a measure an insurance against excessively heavy losses which would count up far more in the end than the difference I pay him and a cheaper man.

The overhead of 15 cents per mature pullet, or a total of \$150 for 1,000, is the investment on \$1,500 worth of colony houses, land, and equipment, depreciation and other charges of a similar character.

The miscellaneous charge includes the considerable mortality we all encounter, and so makes it higher than the corresponding mature fowl mortal-

Sick Baby Chicks?

Germozone operates just as these people say. It is preventive as well as curative, and satisfaction is absolutely guaranteed. Twenty years on the market. Sold by drug and seed stores at most towns.

Wm. E. Shepherd, Scranton, Pa., wrote: "Two weeks after we started last spring we were a mighty discouraged pair. Every day from three to six chicks dead. A neighbor put us next to Germozone and we are now sure if we had had it at the start we would not have lost a single chick." Ralph Wurst, Erie, Pa., "Not a case of white diarrhoea in three years." C. O. Petrain, Noline, Ill., "I never had a sick chick all last season." Mrs. Wm. Christiana, Olive Ridge, N. Y., "Have 800 chicks now 5 weeks old and not a single case of bowel trouble."

GERMOZONE is a wonder worker for chicks, chickens, pigeons, cats, dogs, rabbits or other pet or domestic stock—for roup, bowel trouble, snuffles, gleet, canker, swelled head, sore head, sores, wounds, loss of fur or feathers.

If no dealer, order by card. Postman will collect. No extra charge. Handy as phoning. 75c and \$1.00 pkgs. Baby Chick Book FREE.

CAPON TOOLS

The Burdin Unobstructed Vision design stands without an equal and is used and recommended exclusively by leading experts and Agricultural Colleges. Sold on absolute money-back guarantee. Seven years unprecedented success. Illustrated descriptive literature, 6c in stamps. S. K. BURDIN, Suite 16, 120 Stibbard Ave., TORONTO, ONT

ity charge. I believe if every commercial poultryman raised 75% of his pullets to satisfactory maturity, he would consider himself pretty fortunate. So the charge of 800 chicks at 25 cents each, counts up. The loss must be reckoned with, and this is the place to do it. The 3,200 chicks mentioned is the number usually needed to insure the number of mature pullets involved here. This is a charge of 20 cents per chick, and the remaining costs include smaller incidentals always encountered.

The labor charge of \$1.20 per hen per year is allowed if you engage a man to do the work. If you do it yourself, you may drop this, giving you a total net upkeep cost of \$2.25 at the end of the laying year per bird, with your profits still to be considered.

The cost of 25 cents per hen for overhead includes 6% on building, equipment, and land invested of \$3,000, and also depreciation, taxes, and insurance. Your housing will be close to \$2,000, and the value of your range for the hens, or the range required for their green food, etc., will be close to another \$1,000, if you are located in a desirable neighborhood.

You may allow the rent saved by occupying the dwelling on the place as representing its upkeep charge, so that need seldom be considered as an item chargeable to the hens or chicks.

Cost Per Dozen Eggs.

If our hen has laid us 10 dozen eggs per year, and it has cost us \$3.45 to maintain her, the production cost per dozen is 34½ cents per dozen. It is for us to know what we receive for those ten dozen eggs in the shape of hatching eggs, baby chicks, or table products, to determine whether we are making money or not.

If our hen has been kind enough to lay us 12 dozen eggs for the year, the production charge per dozen drops to about 29 cents, and so on either up or down the line. If you are doing your own work on the farm, your net cost per dozen will run around 22½ cents on the ten dozen per year basis. This, by the way, agrees very closely with production figures as outlined by a number of authoritative sources.

We have now arrived at some sort of cost production basis of understanding. It is the hope of the writer that these few ideas have opened the way for new channels of thought. It is not hard to keep sufficient account of these charges as the weeks roll by for us to know within a few cents what we are paying out as fixed costs and charges, in our business of conducting a poultry business.

Isn't it time that all of us knew that much about our business? Doesn't the drygoods merchant, the butcher, the baker, and the candle-stick maker, know these things? They do, if they are considered progressive and wideawake. I know what a cloud of smoke I would raise if I said that poultrymen were less competent or efficient than others. If I did, I would be throwing sand in my own eyes, so we may let it go at that.

At present-day feed and other costs, therefore, it would seem that poultrymen can make a very satisfactory showing for the money and the time invested in a moderately-run enterprise. To my way of thinking, no time has ever been better for the poultryman.

Brood Your Chicks 30 Days FREE!

**1,500 Chicks
around one stove**

Also small size stoves.
No hovers to bother
about. No gas, no
fumes, no wicks, no
smoke. All bother
and worry gone.
Losses reduced to a
minimum.

Use this wonderful new Simplex Brooder Stove in your own brooder house 30 days absolutely free. Write for free Brooder Book fully explaining offer. Try the stove under all conditions. Make any test you know of. Then, at the end of 30 days, if you are not delighted send it back and we'll cheerfully refund your money. You alone are the judge.

Turns Losses to Profits

This wonderful new brooder will raise 50 per cent more of your chicks than you have been able to raise by old-fashioned methods. No more deaths from white diarrhoea and poor ventilation. It turns the losses from dead

chicks into big profits for you. The Simplex soon pays for itself by extra money it makes. The Simplex Brooder Stove means one-tenth as much work—costs one-fourth as much to operate as any other system. It is self-regulating—needs no watching—eliminates all worry. Try it 30 days free.

White Faced Black Spanish

I am breeding a hardy, vigorous strain pure white, medium sized faces. Prolific layers of large, white eggs. Cockerels, eggs, baby chicks. CLARENCE HEWES, 2055 Hillside Ave., Indianapolis, Indiana.

Personal Qualifications of the Poultryman

(Continued from page 156.)

arise that cannot be easily regulated, and a considerable amount of perseverance on the part of the poultry keeper is required if he is to stay in business. Among the conditions that are difficult to regulate are poor hatches, outbreaks of diseases, and losses through theft or fire. Many poultry failures are directly traceable to discouragement at unexpected occurrences and lack of perseverance in carrying the project through to a profitable basis.

One Missouri poultry keeper, who is triumphing over her difficulties due to her perseverance, is an elderly lady who moved to the farm a few years ago from a small city and started to build up an extensive poultry plant. She started in a small way and had good results for the first year or two. Then she had difficulties with her incubators one year and succeeded in raising only a small number of chicks. Another year her poultry industry suffered a severe loss through some farm buildings being destroyed by fire, entailing a considerable loss of poultry feed. In spite of these difficulties she has persevered year after year in building up her poultry flock, until during the past year she has realized a total net profit of \$1,429 from her flock of 360 hens. The present year's good showing is made possible by the fact that she has increased the quality of her flock at the same time that she has been building it up in size, and at the present time has a fine flock of trapnested pedigreed birds which are beginning to command a good price for breeding stock. During the past year she trapnested more than 200 hens and found over 40 that laid more than 200 eggs during the year.

On One Acre of Land.

That there is an opportunity for people who have the necessary qualifications of pep, patience and perseverance to succeed in poultry keeping is shown by the record of a Missouri woman who lives at the edge of a small town and carries on her poultry operations on one acre of land. During 1921 she sold \$1,113 worth of eggs and \$486 worth of fowls from the 225 hens kept on her acre lot, and after deducting her feed bill of \$461 had \$1,138 left. This woman had \$758 invested in stock and \$580 invested in building and equipment. After deducting interest on her investment and miscellaneous expenses, she had a net profit of \$1,027.

Opportunities were probably never better than at present for those who feel the lure of the hen to engage in the poultry business with reasonable assurance of success if they possess the qualities that go to make successful poultry keepers. However, those who are considering embarking on poultry keeping as a principal occupation should carefully consider their own qualifications in the matter of the constancy of their enthusiasm, their courage to withstand the ups and downs incident to getting established, and their perseverance in staying with the proposition until they make it succeed even though it takes a considerable period of time. For those whose pep is periodic and whose

Shape special on 1st cock, 1st hen, 1st cockerel, 1st pullet.

Color special on 2d Cockerel, 2d pullet.

Special for the best 3 cocks.

Special for the best 3 hens.

Special for the best 3 cockerels.

Special for the best 3 pullets.

Special for the best 2 old pens.

Special for the best 2 young pens.

Special for the best exhibit of cock and hens.

Special for the best exhibit of cockerels and pullets.

Special for the best 2 cocks, 2 hens, 2 cockerels, 2 pullets, 1 old pen and 1 young pen.

Grand sweepstakes special for the best 4 cocks, 4 hens, 4 cockerels, 4 pullets, 2 old pens and 2 young pens.

GRAND BREEDING BIRDS

From the same blood lines that produced my famous prize winners this year and that have been producing prize winners and heavy laying stock each year for more than a half century. Elegant single birds, trios and pens of the richest breeding quality mated to reproduce prize winners for you.

HATCHING EGGS FROM TESTED BREEDERS

No other Rhode Island Red matings ever produced the high class show birds that mine did last year and I shall mate again this year the same blood lines and as near as possible the same birds, using my great winners at Boston to strengthen the producing power of the matings.

Hatching eggs from these pens will produce show birds and heavy layers that will reward you by the prizes they will win. Send for free mating list. Tompkins' Rhode Island Reds are the best money will buy, a fact well established by customers everywhere.

MORRIS POULTRY FARM

HAROLD RAWNSLEY, Manager

LEBANON, OHIO

A guide to success in this, the most difficult poultry problem

Know How to Turn Loss Into Profit

The results of many years of practical experience and study. Written by Prince T. Woods, a man who knows how and who can teach others. This book will save many dollars for any poultryman and is indispensable to the beginner.

Read These Chapter Titles Over

Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artificial. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhea. What white diarrhea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for years.

Don't go through years of costly and discouraging experiments to learn the facts taught in this book. One chick saved will pay for it. Learn how to feed; to prevent disease; to make your own brooders, and feed for your chicks. 75c postpaid.

American Poultry Journal, 523 Plymouth Court, Chicago, Ill.

patience is insufficient to bear up under the routine daily tasks involved in handling the poultry flock and whose perseverance is not strong enough to carry them through possible adversities, the safest course is to overcome the lure of the hen by a frank acknowledgement of their own shortcomings and content themselves with an occasional visit to the poultry show and the periodic reading of the stories of how others succeed in the chicken business.

The Male at the Head of the Breeding Pen.

(Continued from page 157.)

Exercise is vital to continued vigorous health in breeding cockerels. Feed their drain in a deep litter and use every means to insure exercise.

There is probably no more disastrous condition that may occur in a poultry breeding pen than frozen combs on the cockerels. This is particularly true in the cases of the larger-combed breeds, and during this month which is with us now, February. The consequences of frosted combs on the male birds is pain, lowered vitality and activity, and indisposition to exercise and to eat. This means immediate dropping down in fertility and strength of eggs.

Cockerels with badly frosted combs will not mate with the hens regularly, if at all. A few days being laid up may cause considerable losses. The breeding flocks, if housed in poultry houses in which the fowls roost rather close to the front of the house, should be protected on cold nights, by an added curtain in front of the perches, or by other means of counteracting the low temperatures. In the twenty-foot houses there is relatively less danger. A prevented frosted comb is worth much more than a cured one. But sometimes even when the best of care is used, nipped combs are found on frosty mornings. The writer has had excellent results in treating these, and in many cases saved the point, by using a simple ointment, made by mixing thoroughly one part of turpentine, two parts of glycerine, and four parts of vaseline. Apply gently twice or three times a day to the frosted parts. It relieves the swelling, removes the pain, and helps cure the injury and quite quickly.

Be sure that the breeding cockerels are not laden with body lice. Examine them thoroughly when placing them in the pens, for if they carry the lice into the pens it will not be long before the hens too are lousy. Apply sodium fluoride, commercial grade, by placing a small pinch of the dry powder at the base of the tail underneath, one at the vent, under each thigh inside and outside, and under each wing, one at the saddle and one on the hackle. The U. S. Government has done a service in putting forth this method for poultrymen to use. If there are any signs of scaly leg, that is indicated by rough, up-lifted scales on the shanks, dip the shanks into kerosene.

Rested Cockerels.

It is a mistake to keep the breeding cockerels with the hens at all times, as they should be placed in the flocks only during the breeding season. Increased vigor and fertility will result. Do not overwork the breeding cockerels, or else the strength and vitality of the chicks will suffer. One male should be used

Vitamines for Hens

Doubles Their Vitality and Egg Yield

Feed experts admit the necessity for a plentiful supply of vitamins for laying and breeding hens. Vitamines maintain the vitality and robust health necessary for heavy egg production and strong, hatchable eggs. That's what we give you in Sucrene Buttermilk Egg Mash. It will help you

get more money from your hens. Feed them Sucrene Buttermilk Egg Mash and get twice the egg production that they will give you on ordinary grain feed—increase their vitality so that they can maintain a super egg production all year and especially in winter.

SUCRENE BUTTERMILK EGG MASH

Not only contains all the nutrients which nature demands for egg production, but is also rich in vitamins—vitamines which feed and increase the vitality and stamina of your hens improving them in health and vigor regardless of the strain of heavy egg production. For results you will find it the cheapest feed you ever used and the best investment you ever made.

And for raising better and more vigorous chicks and saving more of the chicks hatched you will get surprising results from Sucrene Buttermilk Chick Mash. In fact, the poultry man who uses only these two Buttermilk feeds will reap a harvest in greater egg production and more and better chicks raised.

Prepared by feed experts, Sucrene Buttermilk Egg Mash and Sucrene Buttermilk Chick Mash are composed only of the finest feeding materials including dried buttermilk and meat meal—Guaranteed analysis on every bag.

If you want more eggs and more vigorous hens and chicks try these Vitamine feeds today. Send coupon for a 100 lb. sack of one or both. Both sold at the same price, \$2.85 at the mill. Our large mills centrally located insure prompt shipments and low freight rates.

JAMES R. WOTHERSPOON, Inc.
Box 240 Sinking Spring, Pennsylvania

for every ten to fifteen hens. This ratio changes somewhat with breeds, with conditions and with the differences in individual males. Sometimes it is wise to remove the males from the breeding pens every other day, simply for resting purposes. This is practical and advisable, especially where small numbers are involved. The writer has found it advisable to go through flocks numbering several hundreds hens once in a while during the spring and remove certain of the cockerels for a few days. Keep your eyes on them.

The cockerel that begins to lose color in his head parts, who shows signs of weakened vitality, or of lagging back from the flock, would be promptly removed and studied.

Pedigreed Cockerels.

The breeding cockerels should have a family tree. The time is fast approaching when the most successful poultry raisers are to be those who have pedigreed cockerels for use in their breeding pens. It means mighty strides ahead in the development and upbuilding of the quality and productive capacities of the flocks in succeeding years.

As the season advances the profitable cockerels will sift themselves out from the unprofitable ones. The good cockerels will fertilize a high percentage of the eggs, will not select his females, and will produce strong, vigorous chicks. If a particularly good individual is found in this season do not discard him, but keep him over for another year's breeding. Remove the males from the breeding pens as soon as you are through saving hatching eggs, and sell those which are not to be retained for the next year, and carry the others through the summer in good shape. It certainly pays in dollars and cents to watch the cockerels.

Question of Admitting Rhode Island Whites.

(Continued from page 151)

cleers, and Blue Plymouth Rocks, until such time as they have enough breeders back of them to warrant the action.

When someone talks of admitting worthy, widely bred, practical varieties, there goes up the old howl about too many varieties already. I say that if there is not room in the Standard for Rhode Island White and other worthy varieties, then it is time to clear out some of the dead letters and MAKE room for them.

Mottled Javas, Blue Plymouth Rocks, American Dominiques, Buckeyes, White Langshans, Red Pyle Leghorns, White Dorkings, Colored Dorkings, Red Caps, Crevecoeurs, La Fleche, and many, many others are practically never seen. Some of these varieties were popular at one time, but today nobody takes an interest in them. They are not bred, they are not exhibited, yet we keep them in our Standard of Perfection, and call them "the good old breeds."

We insist on keeping a lot of dead wood in our Standard, and we insist on keeping out a lot of live, worthy varieties. We have at almost every show classes for light and dark Barred Rocks, yet the breeders insist on not having them in the Standard. No wonder the Agricultural Colleges and Experiment Stations (some of them) don't have much respect for our Standard of Perfection. We have classes in our

BERRY'S FARM, Box 150 Clarinda, Ia.

shows for Rhode Island Whites, Rose Comb Barred Rocks, etc., and yet we refuse to have them in the Standard. I say cut out the dead wood, and put some of the "good old breeds" on the retired list, and make room in the Standard for the live, up-to-date varieties of today.

The A. P. A. has recognized Sicilian Buttercups, and rightly so, for they have a specialty club back of them, and have been and are being widely bred and exhibited. But why these freak Missouri Fluffs and Chanticleers? What will it be next? Perhaps a five-toed, bearded, silver Leghorn Bantam? Or will it be a frizzle-feathered, pea-combed, rumpless Wyandotte? Or possibly a pink Plymouth Rock?

We have room in the Standard for all kinds of freaks and all manner of varieties that are dead and gone, but no room for Rhode Island Whites. However, if the Rhode Island White breeders are again turned down, as seems likely, they can console themselves with the thought that, after all, it really does not matter much whether or not they are recognized by the high and mighty American Poultry Association. They will go on being bred and exhibited just the same, and in the end the A. P. A. will have to come around and let them in.

Just a word with reference to "down" on legs. Doesn't it seem foolish for a judge to looking at a bird's feet with a magnifying glass to see if he cannot find a tiny speck of down, and then, if he finds it, to throw out perhaps the best birds in the class? I say, throw them out for stubs, but not for a tiny bit of down that may develop overnight. The sooner some of these foolish absurdities are eliminated from the Standard of Perfection, the better for Standard-bred poultry. No wonder people say that the Standard of Perfection is all nonsense, and "fancy" poultry all "fuss and feathers." For, when a good bird is disqualified for a tiny speck of down, of microscopic proportions, that is about what it amounts to.

We should not make our beautiful Standard-bred birds over into so-called utility stock, but we should eliminate from the Standard of Perfection some of the dead wood and some of the absurd requirements.

In closing, permit me to say a word about weights. We have Standard weights for most varieties, and also disqualifying weights. But must the judge guess at these weights? Why not go back to the old practise of weighing every bird in the show and throwing out all that fall below disqualifying weights, even if only an ounce or two? The way in which it is done at comparison shows surely encourages carelessness with regard to weight.

Michigan. J. G. Vos.

I have just read with considerable interest and, I must say surprise, the article, "Stop This Race for Novelty" in the January issue of the American Poultry Journal, and having in mind Mr. Hewes' article in an earlier issue of the Journal as regards the admitting of the Rhode Island Whites to the Standard, I would like, in my own way, to throw a new light from a different direction as regards the admitting of new varieties to the Standard of Perfection.

Hillview Strain

America's Champion S. C. White Leghorns Won Another Sweeping Victory at the Coliseum Show at Chicago, Dec., 1921

1st, 2nd, 5th cock; 1st, 3rd, 4th, 5th cockerel; 1st, 2nd hen; 1st, 2nd, 3rd, 5th, pullet; 1st, old pen; 1st, 3rd, 4th young pen. All first prizes best display and all specials.

This is the 4th consecutive clean-sweep we have made at this Greatest of all the White Leghorn shows, a performance never approached by any other strain in existence today.

First Prize Pen Arkansas Egg Laying Contest, 1921

Against all breeds—Hillview Pen finished the contest 78 eggs ahead of nearest competitor; 1st prize Missouri Egg Laying contest 1918; 1st prize yearling hen pen American Egg Laying contest 1918; best record over all Leghorn pens from Jan. 1st up to Oct. 31st in Missouri Egg Laying Contest 1920—Official records, 257, 248, 267, 217, 248, 251, 257, 243, 240, 246, 267, 238, 233. We have produced more exhibition hens with official records ranging from 200 up to 267 eggs in one year than any other strain or breed.

On Speckled Sussex on 7 entries, we won second hen, second cockerel, first and third pullet, and second young pen.

Stock at all times. Book your orders now for eggs and baby chicks.

A. & E. TARBOX,

BOX A,

YORKVILLE, ILLINOIS

I am amused at the statement of Mr. McCullough where he says that since the Rhode Island White is so near a White Rock that it would hurt the White Rock business. It seems to me that here he is weighing dollars instead of chickens. Mr. McCullough goes on further to state that the White Rock Breeders are not afraid of fair competition with other varieties and are not afraid but that the White Rock will hold its own, but its the principle of the thing that is wrong. That line of reasoning reminds me of one of "Abe Martin's" sayings where he says: "When you hear a fellow say, 'It's not the money—it's the principle'—you can bet your bottom dollar it's the money."

Now, the correct solution for the above is just this and only this: Admit the Rhode Island Whites to the Standard. Let the poultry press and the breeders who favor this variety give it the same attention and publicity that has been accorded the White Rocks, and only a few short years will suffice to determine the merits of the two. Now, isn't that the fair and sane way to look at this matter? I think so. Personally I have no interests whatever in either of the above varieties, there are dozens of breeds and varieties that appeal to me far more than either the White Rocks or Rhode Island Whites—breeds that, to my mind, take far more skill to keep to a uniformity of type and color. But to those who favor the White Rocks or Rhode Island Whites, they no doubt find breeding problems that interest them and make their appeal. I would not for one minute condemn either of the two.

No, if there is a business in all the world that demands and is in the need of fair play, it's the poultry business—just cast your eyes at some of these "home grown" egg records. I know of a man who goes out and buys here, there and most everywhere and puts his "twenty-five or more years of line breeding back of that bought-up junk. This is a little bit off the subject, but it follows the same line of thought. There are several instances that would fit in right here.

So let us not try to BOOST our varieties by trampling under our feet the variety of the other fellow. You can't exchange the value of your variety by knocking the other fellow's, and the sooner some people learn this the better off they will be. I have an idea that when it comes time for us to take our trip to the next world we will be judged wholly by our degrees of selfishness. Think it over. Rather then, let us by right breeding in our birds and fair play in our business methods, show to the buying public the SUPERIORITY of OUR birds.

Indiana.

John G. Evans.

Early Pullets are Needed for Early Eggs.

(Continued from page 153)

shady spot in summer, and where it is not likely to freeze in cold weather.

Grit and oyster shell are included among the necessities for both young and old stock, and remember that one does not take the place of the other. Don't expect your birds to grind their food with oyster shell. Charcoal of suitable size is also often kept in hoppers, and this is recommended where the powdered form is not used in the mash.

TYPEWRITER SENSATION

Free Trial—Use as You Pay

After trial send us only \$5.00 a month until the low total price of \$59.85 is paid, and the machine is yours. This is absolutely the most generous typewriter offer ever made. Do not rent a machine when you can pay \$5.00 a month and own one. Think of it—Buying a \$100.00 Machine for \$59.85. Cash price \$54.00, just a little more than half its original price.

L. C. SMITH

Perfect machines, Correspondence size, Keyboard of Standard Universal arrangement. 38 Keys, writing 76 characters—universally used in teaching the touch system. The entire line of writing completely visible at all times, has the tabulator, the two color ribbon, with automatic reverse, the back spacer, ball bearing type bars, ball bearing carriage action, ball bearing shift action, in fact every late style feature and modern operating convenience. Comes to you with everything complete; tools, cover, operating book and instructions—nothing extra to buy. You cannot imagine the perfection of this beautiful reconstructed typewriter until you have seen it. We have sold thousands of these perfect late style machines at this bargain price and every one of these thousands of satisfied customers had this beautiful, strictly up-to-date machine on five days' free trial before deciding to buy it. We will send it to you P. O. B. Chicago for five days' free trial. It will sell itself, but if you are not satisfied that this is the greatest typewriter you ever saw, you can return it at our expense. You won't want to return it after you try it, for you cannot equal this wonderful value anywhere.

Send No Money
Put in Your Order Now

\$4.85
AFTER
TRIAL

When the typewriter arrives deposit with the express agent \$4.85 and take the machine for five days' trial. If you are convinced that it is the best typewriter you ever saw keep it and send us \$5.00 a month until our bargain price of \$59.85 is paid. If you don't want it, return it to the express agent, receive your \$4.85 and return the machine. We will pay the return express charges. This machine is guaranteed just as if you paid \$100.00 for it. It is standard. Over half a million people own and use these typewriters and think them the best ever manufactured. The supply at this price is limited, the price will probably be raised when next advertisement appears, so don't delay. Fill in the coupon today—the typewriter will be shipped promptly. There is no red tape. We employ no solicitors—no collectors—no chattel mortgage. It is simply understood that we retain title to the machine until full \$59.85 is paid. You cannot lose. It is the greatest typewriter opportunity you will ever have. Do not send us one cent. Mail Coupon Today Sure.

Monthly Prize Article Contest

American Poultry Journal pays \$4 and \$3, respectively, for the two best articles sent in each month on poultry subjects. Choice of subject is not limited. The articles need not be lengthy. Helpful suggestions based on the writer's experience afford the basis for awarding the monthly prizes. Photos or drawings for illustrations will be welcome when available. Articles may be mailed any time during the month. Write your name and address at top of first page and the words "A. P. J. Monthly Contest." Write article on only one side of the paper.

A Success.

First Prize Article.

I am a constant reader of your valued Journal, and take much interest in its pages. I frequently notice short articles in it for new beginners stating their success with small flocks, which no doubt help many others in the work, and as I am of that kind I thought it might help someone if I would give my experience with a back lot flock, if you would think it worthy of the space in the Journal.

Last spring I contracted a severe case of chicken fever and I concluded to try the experiment of raising some on my back lot. I had one little house 8x10 feet and only a yard 16 feet square. However I sent off and purchased 100 S. C. White Leghorn eggs from a poultry farm near St. Louis who had had their stock in several of the egg laying contests which had made wonderful records in each contest, at Mountain Grove, Mo.; Leavenworth, Kas., and Lincoln, Neb.

I also purchased 100 eggs from a noted breeder of Rhode Island Reds, as I wanted to see which breed would suit me the best for future business. I incubated these eggs and had a good hatch considering I was new at the business, getting a 60% hatch from all eggs put in the incubator. When these hatched I installed a coal burning brooder stove in the little house I have mentioned, and put the chicks about it. At the very start I used rolled oats for a few days, then used chick feed. They did well. I used the little yard for them to run in and would give them lawn clippings for green feed. They grew nicely without scarcely any loss.

In July I saw I was going to have to build a house for them to lay in and it was my good fortune about that time to be in communication with G. E. Stillwagon, who wrote a comprehensive article on growing and housing pullets, which appeared on page 1071 of your December Journal. He designed for me a combination brooder and laying house. When this house was finished it proved to be most satisfactory. It is a back yard house, 10x24 feet, divided into two rooms. I can close it all up and make it like a room of a house if I wish, and still the ventilation is perfect. Again I can open it up and it is like a wire coop to a great extent, and no drafts. One has perfect control of the light and air. I have seen hundreds of poultry houses, but none can equal this design.

In August I put all my young stock in this house and kept them in it all the time, excepting in the late evening I would let them out for a half hour to get some green feed in the lawn. I sold all the cockerels but three which I desired to keep for my breeding pens this coming year. I also discarded a few cull pullets, which left me 39 White

Leghorns and 29 Reds. I, of course, kept the two breeds separate.

Now when my Leghorns were four and a half months old some of them commenced to lay. Knowing that they were not fully developed I changed the method of feeding. I had been feeding equal parts of wheat, oats and cracked corn and a moist mash at noon. The scratch grain was fed in the morning and at evening all they could eat up clean. I changed the scratch feed to two parts cracked corn, one part wheat and two parts oats, and discontinued the moist mash. I never fed dry mash at any time. By changing the feed the pullets stopped laying and grew nicely and their legs and bills got as yellow as gold. In the last week of October they seemed to be fully developed in every way; combs growing nicely and drooping over. I then commenced to feed them for eggs. I fed them equal parts of wheat, oats and cracked corn, allowing them one part of this feed per day for twenty Leghorns, two-thirds of this I fed in deep litter in the morning. At 11 a. m. I fed them the remaining one-third, to keep them busy, and at evening about an hour before they went to roost I gave them all the moist mash they could consume. They commenced to lay within a few days and I trapped them from the first day of November. My Leghorns laid 36 1-3 dozen eggs in November, an average of 16 eggs each. Some of them did not commence to lay until about the 10th of the month. Not one of them as individuals gave less than a 50% yield for the time they were laying during the month. Lots of them laid 60, 70 and as high as 80 %.

My Reds did not commence to lay quite so soon, but made an average of 40% during November. During December the Leghorns averaged 60% and the Reds 50%. The eggs I received during November and December brought me \$122. The feed they consumed during these two months cost me \$20.74, leaving me a profit of \$101.26 for the 68 head, which I do not think is so bad for a new beginner.

I am much interested in the business and see the profit there is in it for a man who will equip himself to meet the high price market of November and December.

Missouri.

Harry Heins.

A Failure.

Second Prize Article.

Like a good many other people who are imbued with the idea that they can make chickens pay, I have been a reader of your Journal for a number of years. In that time I do not recall ever having seen a letter from anybody admitting or complaining that they could not make chickens pay. Has everybody else succeeded in making them pay, or don't they write about it when they fail, or don't you publish that kind of a let-

Are easy to use and can be read ten feet away. Large numbers printed on seven colors of celluloid and held in an aluminum band. Edges rolled so as not to hurt the legs. Good for trapnesting hens.

Numbers from 1 to 300 on white, red, yellow, blue, cerise, pink and green celluloid. Numbers from 1 to 300 on white, red, yellow, for sample and circular. Price 3 cents each.

BOURNE MFG. CO.

231 HOWARD ST.

MELROSE, MASS.

ter. My dad used to tell me there was lots of money in the poultry business, but he never failed to add at the same time, "that darn fools sunk it there." Maybe the other failures, assuming that there are others, have kidded themselves along year after year, just as I have done, thinking that because, after more work than anybody would do for wages, they succeeded in raising a crop of nice looking birds, and later, two or three months after the scheduled time of the advertiser you bought the stock from, they began to shell out an egg or two now and then, and that "grand and glorious feeling" that Briggs pictures came along, and we paid out our money in feed, coops, fancywork for the hens, and figured that if we only had a thousand more hens, just like these here, we would be making enough to quit our jobs.

I started in with White Leghorns, getting stock closely related to the first cockerel at Cleveland, Ohio, a number of years ago. We tried keeping them in a large city lot, but shortly grew weary of keeping them tied up so they would not fly over the neighbors houses. We were finding out in the meantime that the fanciers hadn't got very far along towards combining beauty with utility, and we had to buy eggs in the spring in order to get enough together at one time to hatch.

We finally decided to switch over to the Reds, and I purchased eggs and stock from a small breeder who seemed to be having a little success in his line. These were fairly satisfactory, doubling the laying record of the fancy Leghorns, but they kept coming out with slip wings, and fancy strawberry clothes, and I finally got disgusted with them, as I had paid a fancy price for fancy stock, and didn't appear to be getting what the doctor ordered. I then decided that maybe I hadn't paid enough money for the Reds to get some good ones, and I got a number of eggs from a breeder that swept the big shows not so very long ago, paying one dollar per egg. We got six chicks out of the first two settings, and, after raising them with the same care you give the kids, discovered we had five cockerels and one pullet. Four of the cockerels were good enough to eat, and the other I sold for five dollars to a man that evidently didn't know any more about chickens than I. The pullet was stolen after laying ten eggs, along with some other chickens, and the police later located them in possession of two small boys, who had killed them and were trying to sell them for eating purposes. I gave the chickens to the police for finding the thieves. This ended the fancy chicken craze for several years, and I was able by steady work to make up the losses.

Last winter we made up our minds to try it again, and picked the Wyandottes as the breed that would pay themselves out. I don't believe that there are any better Wyandottes raised than those of the breeder we bought eggs from. Naturally, I won't mention his name. We got less than 60 per cent out of the first hatch, got a duplication at half price, and got 52 per cent out of that. We raised all but two, which were drowned in a heavy rain. The chicks were hen-hatched, raised to five months on buttermilk food, and one of the standard scratch mixtures, and then put on fed with a well advertised mash

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, K. P. Johnson, 609 W. Lake St., Chicago, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first used in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make \$250 to \$500 per month.

and scratch food. Twenty of the pullets looked good enough to keep, and if they were any good, would give us a good start this spring just as we had planned. All of the cockerels but three had slip wings, and these three were wry-tailed, or had a worse deformity. The pullets started to lay when they were six and seven months old. Their best record to date is seven eggs in one day from twenty pullets, all of which were guaranteed to be from hens that had trapnested records of 180 to 240 eggs per year. I haven't yet decided whether it's the advertised purebreds, pedigreed and trapnested, guaranteed to win at any show, or me.

I presume your advertisers will say that the fault is mine, not the chickens. As a sort of an alibi, I'd like to outline the feeding methods used, as well as the conditions under which we have kept our fancy stock. To begin with, we feed the chickens every day, not some days, with a nationally advertised and known scratch feed, and a mash feed sold by the same people, the combination being guaranteed to produce eggs. We give the chickens unskimmed Jersey milk, buy them green cut bone at ten cents a pound, keep oystershell and grit before them all the time, give them free range in an almost ideal climate, and keep charcoal handy all the time. They have double the nest and coop room recommended by the experts, and I have lost only one chicken in the past seven years through disease. They are all dipped every sixty days in a solution of sodium flouride, and the roosts are kept absolutely free from mites with crude oil. It cannot be too cold for them to lay, as it has not snowed since November 11, 1920. It is not too wet, for we haven't had a rain since June. Their green food comes from the table scraps.

Maybe some of your readers will have some argument that will convince me that it isn't the chickens' fault. I'm willing to be convinced either way. As it stands now, I'm getting nice fresh eggs at around ten cents each.

J. P. Durkin.

The Females.

Sometimes I wonder if writers for poultry journals ever owned a hen, or, if so, actually mate up a cock and hen for breeding purposes. As Mr. Hackman in his article in your January issue put so much stress on the male used, I just thought I would write you that I consider the female nine-tenths of the yard as far as results go in line breeding. I have been at it for a long time. One variety I have had continuously for 42 years and two others for over 30 years.

I do believe that hens are better than pullets, but sometimes in haste to find out color schemes I have hatched the first egg a pullet laid and results were not awful bad. Rev. T. W. Harwood in October American Poultry Journal says to get the female color right and then call the male of Standard color that will produce such color, and that's the way! Or the other way about, it doesn't matter as long as the ideal male and female are perfect mates!

Now in penciled Hamburgs it is the other way around for the males are the most difficult to get. I take a male bird and breed back to him for four or five years, and that gets a female that will produce males I want, and in other varieties the female is used that way. Intensify the type into 31-32 blood. The danger of inbreeding is nonsense if good health is insisted upon. Setting a Standard for a male that cannot be mated to the Standard female is again nonsense.

Maryland.

Elbert Wakeman.

Get the Big Profits With Pure Breeds

Get Big Profits with Pure Breeds *Learn How to Start Pure-Bred Flocks with old Trusty*

Old Trusty hatches them all, pure breed or cross breed. Either makes money but pure breeds give you the high priced eggs for hatching, high priced fowls for brood stock and unusually higher laying records. Pure breeds make more money and take no more time or trouble.

The Johnsons have helped many families to bigger money by helping them start more and better pure breed flocks. This is just another one of the many subjects you will find in my big free 1922 book of poultry profits.

Write and Let Me Send You A Copy of Our 1922 Book

telling about Old Trusty's success in hatching all varieties of purebred chickens, ducks, geese and turkeys. Here in Clay Center we have made quite a feature of Old Trusty raising purebreds. It costs no more to hatch purebred eggs than it does those of the ordinary kind and the results tell a better story. At the poultry shows and leading expositions many of the prize winning birds were hatched from Old Trusty. Leading fanciers always prefer a good incubator in hatching out purebred birds, because in a good incubator the chick is hatched out earlier and has more time to develop and feather out, so as to be in the best condition at show time. Old Trusty answers the requirements for the poultry fancier. Has no needless frills nor fancy "doo-dads" to interfere with its dependability. It is all that a good incubator should be—no more, no less, and because it is made by up-to-date manufacturing methods, in the world's largest exclusive incubator and brooder factory, I can sell it to you for less money than any one else would have to ask.

Write today and get our catalog and 1922 price on Old Trusty, freight or express prepaid to your station.

(Photo of Mott Johnson and his pure bred chickens.) Young Mott Johnson took first second, third & fourth prizes at the Nebraska State Fair, at Lincoln last Fall. Also took many other prizes at various county fairs throughout the state. Makes specialty of pure bred Buff Orpington

ARE YOU IN OLD TRUSTY'S TEN-YEAR CLUB

You may be eligible for the Old Trusty Ten Year Club. If you have used an Old Trusty, send me your name and let me put it on the books.

My Old Trusty is still as good as new without expense except new wicks. This will be its thirteenth year. Mrs. Clay Speck, Wooster, Ohio.

I have an Old Trusty I have used fourteen years. Just had a batch of chicks come off, 101 fertile eggs and got 100 chicks. Joseph Rhea, Rogers, Nebr.

I have used an Old Trusty for twelve years. Always have a good hatch. There are more of your machines in our neighborhood than any other kind. Mrs. Chase Groat, Madison, Kans.

I had a 150 egg "Old Trusty" incubator that was run for 15 years and is still good yet. I sold it to a fellow here who has run it two years, that makes it 17 years, and it is still good to run. Herman A. Elke, Jr., Chaska, Minn.

We began with your incubator 20 years ago and are now also finishing 20 years with the Fine Standard Bred S. C. W. Leghorns. It is gratifying to be able to say that after 20 years' trial we want no other make than "Old Trusty," because it does even better than your best claims for it. "Trusty" gives good hatches of livable, strong chicks. Mrs. Albert Ray, Delavan, Kans.

Another Money Maker for Poultry Raisers

Every Poultry Raiser Should Have This Practical Chick Saver

Yes, and I am quoting it to you at a live and let live price, so low that any poultry raiser can afford to own it. This metal brooder hen is the result of our own experience. As most of our customers know, we hatch out hundreds of chicks every year, here in Clay Center, Neb. The device which we depend upon most and which has proved to be the biggest help in bringing large hatches through the seasons are our Old Trusty Metal Brooder Hens. We have a number of them for our own use and they are always taking care of big flocks of chicks.

This is a dependable brooder that takes care of any number of chicks up to 300. Burns ordinary coal oil or kerosene and runs a week on two gallons. Has the famous S-1-Heat burner. It is a blue flame wickless burner with lots of heat. Size of top measure about 52 inches across from the point of the legs. Stands about 42 inches high. Made of galvanized metal and built strong and substantial for long service. I am quoting a price on these brooders that

ought to get business and if you will send me your name and address, I will quote you my price, freight or express prepaid to your station.

See What Users Say

Mrs. Florence Stutheight of Upland, Neb., says: "The metal hen surely works to perfection."

Mrs. Helen Holcomb of Clay Center, Neb., says: "I had small faith in oil hovers until my experience with the Old Trusty Metal Hen this spring. My first bunch of Speckled Sussex chicks are now old enough to get along without the hover, and my second bunch of 160 chicks are now two weeks old and doing fine."

Mrs. J. S. Breckenridge, Dinsdale, Iowa, says: "Just a line to tell you that I have had excellent success with the incubator and brooder stove. These stoves sure take the work and worry out of raising chicks. I have 700 White Leghorns all doing fine. The oldest are four weeks old now."

Mrs. B. J. Clark of Oakley, Kans., says: "The folks hereabouts are eagerly watching my brooder stove. My husband built a new, small brooder house and we started the stove with 200 chicks. Rain, snow and cold winds fail to injure the little fellows who apparently love their make-believe mother."

Send Your Name Today

1922 is the year in which poultry raisers will make money, and those who make the most money are those with a good incubator. The difference in Old Trusty and other machines is in the results it gives you, and just a few more chickens saved out of each hatch will more than make up the cost of getting your Old Trusty Incubator and Brooder, now, instead of missing the best part of the season. Write your name on coupon or postal. Mail it now so as to be sure to get Old Trusty book and reduced prices on Old Trusty Incubators and Brooders.

Spring Egg Flow.

The tendency of the Spring markets is such that large producers must seriously contemplate laying down preserving plants or endeavor to find better markets for the eggs produced in Spring. There is another opening which, as yet, has not been fully exploited by producers, and that is the supplying eggs for hatching by the hundreds to those who cater for the day-old chick trade. So far as this trade is concerned the supply up to now has exceeded the demand and the large producer might well give it his consideration. Quite apart from the demand for high-class pedigree stock, there is a great market for ordinary pure bred day olds, and we fear that often the stock offered has been far from satisfactory. Such trade might well be undertaken by egg farmers who, as a rule, are in a position to supply large quantities of eggs from good class stock. It need not materially interfere with the ordinary work of the egg farm, but it would certainly improve returns when prices are lowest and provide the purchaser of day-old chicks with stock far superior to that at present offered by many hatchers.

In the few cases we are acquainted with where this trade is undertaken the price of the eggs for incubation is ruled by the current market price with added value due to the egg farmers' work of mating and general expenses. To our knowledge this trade has improved one egg farmer's profits to the extent of nearly \$1,500 in the year, and this on a farm where only 1,500 birds are kept.

We do not advocate this trade as a general remedy to the Spring slump in egg prices, though it must be remembered that the exclusive egg farmer's produce has little bearing on egg prices, but we think that the egg farmer whose stock is acknowledged to be superior to that found on the general farm should make the most of the advantages his stock offers him.

In the course of the year millions of day-old chicks are sold by those who are hatchers pure and simple. Those who are acquainted with the stock they send out know that it is very often the reverse to satisfactory. These hatchers purchase eggs at prices well above those ruling for table eggs, and there is no reason why the egg farmer, whilst maintaining the character of his farm, should not sell his eggs for incubation purposes and thus help to meet the expenditure in the Spring and early Summer, when there is the added expense of growing pullets.

An extra \$5 per hundred eggs would indeed prove acceptable and would afford material relief when there is much to pay out and little to come in. The market for such eggs is, of course, limited, but it is a market which, for the most part, has been ignored by those who it ought to interest.

The preservation of eggs is possible only to those who can afford to lock up their capital from the Spring until the Fall of the year, and, for this reason, is a course that is open to comparatively few.—National Poultry Journal, England.

CAPITAL REQUIRED.

I do not agree with the criticism of Mr. Forster's article on the amount of capital required by the person starting in the poultry business.

Mr. Stillwagon, in his criticism, suggests the use of the brooder house as the future laying house of the pullets as they mature, which may be a very good arrangement, but he should be a little more careful in figuring, and not make the statement that his house 100x14 ft. will accommodate 800 layers. This statement is like so many we find in the farm and poultry journals which are so misleading to the beginner.

If we had more articles such as Mr. Forster's we would not hear so frequently that 90 per cent of those who start in the poultry business fail.

How is the poultryman, or woman, going to provide the hatching eggs, or baby chicks, if he decides to start in this way, their food and his own, until they are old enough to produce? If he starts with pullets it requires quite a little cash, and again grain for some time. If he starts in a small way he will require an income from some source for a long time.

Elsie Schedin.

Today's Chicks are Tomorrow's Checks

On what you do NOW to prevent loss of chicks depends the percentage that will live and be profitable to you. They don't grow into money in unsanitary, disease-developing, mite-infested living quarters.

Use **CARBOLA**
The Disinfecting White Paint

Instead of Whitewash and Disinfectants

Carbola is the most effective as well as the cheapest and easiest way to obtain the necessary sanitation. It is a paint in powder form which contains a germicide many times stronger than pure carbolic acid. A peeling whitewash means not only loss of light, but loss of the disinfectant sprayed on the whitewash that peels off. Carbola does not peel or flake—it stays on the wall, a day and night guard.

Makes it Easier to Do Work that Must Be Done

The Carbola powder is mixed with water and ready to apply in less than five minutes. Apply with brush or sprayer to wood, brick, stone, cement or other surfaces, or over whitewash, in stables, poultry houses, hog pens, cellars, outbuildings—wherever you have been using whitewash and disinfectants or just whitewash. A gallon (a pound of the powder) covers 200 square feet. Also an excellent lice powder—use it in the dust bath.

Your hardware, paint, drug or seed dealer has Carbola or can get it. If not, order direct—prompt shipment by parcel post or express. Satisfaction, or money back.

10 lbs. (10 gals.) \$1.25 and postage. 20 lbs. (20 gals.) \$2.50
50 lbs. (50 gals.) \$5.00 delivered.

A Straight Draught Without Any Turns

Cantleak Chimney Flange

Patented August 17th, 1920

can be set up on any roof and it will give you straight draught, from your fire up thru your chimney, and a straight draught without any turns is what you want to keep a fire going properly.

Lord Farms, the inventors and manufacturers of the Cantleak Chimney Flange, have been experimenting for a number of years and at last have found the way to obtain a straight and steady draught for the coal burning brooders and mammoth incubators, or wherever a fire is used in an out building.

No wire stays to support chimney—easy to slip it into place and it will stay there. Takes less than two minutes to set up and take down. Write today for one and forget your chimney troubles.

Rockford, Illinois

On a Town Lot.

In the summer of 1917 I purchased a residence in the rural district in our little town in the cool regions of north-eastern Pennsylvania. On my lot there was a poultry house 8 ft. by 16 ft., 9½ ft. to top of gable, with rafter laid on plate, leaving an opening between each rafter about 4 inches high. I brought with me a small flock of twenty-five Barred Plymouth Rock hens, and during the two years I used that house I was continually doctoring sick hens and losing many of them, due to improper ventilation. Blocking up the holes did not help matters, as the litter on the floor would be so damp in a week's time that you could almost wring water out of it. This was too discouraging for me so I decided to rebuild. After studying various poultry house plans I decided to give the Prince T. Woods type of open-air house a trial.

The only satisfactory and available place on the lot for the new house was on the site of the old one, and as it could not be moved to any other part of the lot, I was obliged to place my

A Dr. P. T. Woods 20x20-ft. Open-Front Poultry House.

birds in my brother-in-law's poultry house while I tore down the old pen and rebuilt. Underneath the old pen a ledge of rock jutted out of the ground. This I thought I could use, so I pried off layer after layer of flat rock, breaking it up into suitable widths, and used it to build the wall under my new house, which is 20 ft. square. Using every stock of timber from the old pen, which was almost new, and purchasing new sills, rafters, plates, one thousand feet of 1x6-in. yellow pine roofers, and roofing, my total outlay was \$120.

The new house was divided into two pens, each ten feet by twenty feet, but instead of flooring the entire space, I left the front part, which is eight feet deep, entirely uncovered, so that the hens could get down into the moist dirt. feet, was floored with roofers, with bead turned down. Two boards were nailed on center studs to keep the litter from being scratched down into the dirt. The main floor, twelve feet by twenty Roosts and nests were built on the Potter plan.

In the two years I have used the new

house I have never had a sick bird, the coop is dry and warm, and during the first year of use cleared \$125 above expenses. Starting this year on January 1 with 43 hens and pullets and 7 cockerels, and all prior expenses paid, the result of my eleven months' work with my flock is shown at bottom of page.

To the above should be credited about two tons of manure, with a value of at least \$12, none of which went off my lot.

Twelve of my oldest hens were sold in February for eating purposes for \$33, and five more hens and the cockerels at various times throughout the season at from 38c to 45c per pound, leaving 26 old hens by September 1. During the summer I hatched and raised 20 pullets, 7 of which started to lay in October, the rest not yet reaching maturity.

Having no place to store any great quantity of feeds, it is necessary for me to purchase feed already mixed, and only enough to last throughout the month. I feed at six o'clock morning and night about one quart of mixed grains to each twelve hens, have open before them at all times oyster shell and egg mash, and give each pen about three-quarters of a pound of beef scrap and nine quarts of water, the winter months electric light is used for one hour in the morning, and from five to eight o'clock at night. My flock is under roof the entire time and have no outside run.

In addition to the above I started last spring with six colonies of bees, increased to ten, got 1,200 pounds of honey, netting me \$200. Produced also 12 bushels of peaches, worth \$50; 60 quarts of strawberries, \$21; 66½ quarts of red raspberries, \$23.25, 7 bushels of potatoes, \$10.50, besides having all the vegetables and sweet corn we could use.

This all on a country lot 100 feet wide and 155 feet deep.

Pennsylvania. Albert Williams, Jr.

Securing Good Growth in the Heavy Breeds.

(Continued from page 154)

It has been said, "The feed is more than the breed." But behind the feed there must be an intelligence, and behind the breed there must be an inheritance of vigor and vitality. If you have a passion for thoroughbred fowls you will in time develop a kind of intuition that will help immensely in dictating to you how to supply every need of your birds. In rearing Orpington cockerels we have endeavored to follow along the lines of common sense, a feat not impossible to any reader of this article, if only he or she loves the work.

EGGS**

GUARANTEED

Your Money Back

Is it worth anything to you to know, when you buy a feed, that you positively take no risk, because you can get your money back should you not be satisfied with results?

This is the "bankable" guarantee which one of the oldest, largest and most reliable grain companies puts behind VITALITY POULTRY FEEDS. It is simply assurance for those who never before used Vitality, and means exactly what we say. We know that you will get more eggs and bigger profits because Vitality Egg Mash, fed as we recommend, with Vitality Scratch Feed, is a perfectly balanced ration.

Double Your Egg Production

Do you know that the average egg production is only 6 eggs per hen per month—and that by feeding a balanced ration of high quality feeds, 15 eggs per hen per month is easy, and 25 entirely possible? Think it over—are you feeding a balanced ration and making money, or are you just "keeping" hens?

The fact is that "too great a dependence is placed on corn and chance," as one authority says. The biggest mistake poultrymen make is in feeding grain only, but many are now doubling egg production with Vitality Mash and Scratch Feeds.

Vitality System of Feeding

This means supplying the needed food elements for egg production, as well as for maintaining the body, with scientific exactness. No guessing.

The animal protein is supplied in proper amount by pure dried buttermilk, meat scraps, and bone meal in Vitality Egg Mash. It also includes alfalfa meal which replaces green feed, picked up

during the summer. The Vitality System of balanced ration feeding is the most economical because it brings the biggest profits from your hens.

Raise Chicks with Vitality

Strong, healthy and quick-growing chicks become good early layers and are most profitable. With Vitality Chick Scratch the first week, then gradually adding Vitality Chick Mash, the buttermilk feed, chicks grow with the vitality and strength to fight off diseases and come through to maturity in prime condition. Your losses in chicks are overcome.

Our satisfaction or money back guarantee applies to Vitality Chick Feeds also, and is your positive protection in buying from the Vitality Feed Dealers. Try Vitality Feeds. You have nothing to lose and everything to gain by Vitality balanced ration feeding.

Send for FREE Poultry Bulletin and "Eggs Is Eggs"

We publish an interesting little poultry paper each month, "The Vee League," to which every user of Vitality Feeds is entitled free of charge. We make you the special offer of "The Vee League" for one year FREE on receipt of your name and address. We will also send you a complete poultry manual, "Eggs Is Eggs." This explains fully the Vitality System of balanced ration feeding. Write now. Get these valuable publications FREE. Address Dept. C.

PHENOMENAL LAYERS AS BREEDERS.

How many of the 300 records claimed by utility breeders were made in national laying contests?

How many of these breeders have pens entered in national contests this season? How do their records stand in comparison with standard birds of the same breed entered at the same contest?

Have any of the "300" strain birds produced any phenomenal layers for you? Have the "phenoms" of your own flock proven good breeders? Does the phrase, "300 egg strain" represent ability to produce pullets laying around 300 eggs each their first year?

Has the "utility" bug bitten you yet? I shall relate my own experience along this line, substituting names so as to cause no hard feelings among breeders whose experience may have been somewhat different.

The writer decided to try out some utility stock and utility theories and purchased stock and eggs of three different "ladies" in 1918. Although the "Lady Seven-a-Week" stock was advertised and represented as being of my breed, it proved to be the so-called "English-American" strain, which is, so far as I am able to judge, neither a strain or a breed. These fowls were sold to a customer who wanted "pure bred utility stock" with the advice that I believed he had as much chance of getting standard birds from them as he would have breeding standard fowls from mongrels.

The progeny of "Lady Every Day" were mediocre as to quality and it was evident that either the old lady was nearsighted or the breeder had never possessed a copy of the Standard of Perfection. However, being a fancier, I decided that I was probably not up on "utility" quality, and kept the pen.

Eggs from the "Lady Three Hundred" stock were 80 per cent fertile on the fifth day, but only 39 per cent showed live germs on the tenth day, although eggs from the exhibition pens of the same breeder, in the same machine, at the same time, gave me a good hatch.

To sum up my experience with these fowls and experiments with exceptionally high producers of my own strain, extending over a period of three years, the results were as follows:

"Lady Three Hundred" evidently got mixed up in her calculations and cut off that last cipher on her offspring. "Lady Every Day" did slightly better, for her mongrel progeny but no one of her females equalled in egg production the flock average of my own strain (which held, no high producing records). Crossing the three strains gave a slight increase in egg producing ability, but not as great an increase as is usual when two breeds or two unrelated strains are crossed.

High record females of my own strain gave no better results from the standpoint of ability to transmit high average producing ability, but did show a smaller percentage of loss in this factor. However, my highest record hen had a record of 271 eggs in one year, while the other strains had records of over 300. All three strains failed largely in ability to transmit even good average producing ability to their offspring. The females of the first generation of the two outside strains were almost 50 per cent deficient in ability to transmit hatching power to their eggs and the second generation showed approximately 25 per cent deficient in this particular, even when mated to males showing practically 100 per cent prepotency with other matings.

Males were not lacking in this particular when mated to other females nor was I able to establish that they were deficient.

The fertility of eggs from the special pen of my strain was above 90 per cent, but the hatching power of eggs from first generation was 20 per cent below the average of my regular breeding pens. The second generation cut this down to about 10 per cent. Type tendency was toward standard and away from utility in both "The Lady Three Hundred" strain and my strain. The other strain made no progress toward standard. This experiment, after fifteen years' experience with one strain of one breed, a pedigree system, trap-nests and careful kept records for the past seven years, led me to the following conclusions.

Had I introduced the blood of either of these strains into my entire flock, and, at the same time failed to use trap-nests and pedigree records, I would have been inclined to credit high producing pullets to the new blood, whereas the fact is that this season's high average producers inherited practically 75 per cent of their ability as high producers from the sire, who inherited the ability to transmit this quality from his dam. Both the sire and his offspring were from high average producing dams and not from phenomenal producers. What was an agreeable surprise to me, and still further from the accepted utility theory, those females approaching most closely to perfection were almost invariably the highest

POTTER & CO., 10 Forest Ave., Downers Grove, Ill.

average producers, as well as the best breeders, both in ability to transmit quality to both sex, and ability to transmit high average egg producing ability through their cockerels.

If you have followed utility practices and theories entirely and depended on your phenomenal layers to increase your flock average and perpetuate your strain, you are due to start over again before the close of the seventh season, for you will have left in your strain, nothing of value either from the standpoint of quality or high average producing ability.

Phenomenal layers are an advertising asset, but if you are going to stock on eggs from the breeder's utility matings you will save time and money by getting the stock or eggs from his best exhibition pens. He depends on these pens to improve and perpetuate his strain, both from the standpoint of quality and increased ability to transmit higher average egg producing ability. The tendency to regression in egg producing ability must be offset by breeders that inherit both quality and egg producing ability and possess the ability to intensify and transmit these qualities in greater measure to their offspring.

Line breeding is dependent entirely upon yearly progress, and any tendency to regression must be offset by higher percentages in that particular quarter.

This table may not apply to your strain, yet it may aid you in working out one of your own:

Percent of influence on offspring by:

Sire. Dam.
Male. Fem. Male. Fem.

1. Ability as Egg producers	75	..	25		
2. Ability to transmit No. 1	25	75	75	25	
3. Ability to transmit type and color	50	50	50	50	
4. Ability to transmit head points	75	25	25	75	

My own strain was originally the D. W. Young strain. It has shown a quickened improvement in quality and egg production for the past three years, and I confidently look forward to my next three years of breeding. There is a great fascination about this work of mating, tabulating results, and breeding on!

Georgia. P. D. Larrimore.

Briefly summarized, the following facts have been established by my experience:

Phenomenal layers are poor breeders in that they fail to transmit even good average producing ability to, or through, their offspring; they are deficient in ability to transmit full fecundity, i. e., the processes between germination and birth dependent upon breeding, and, the pullets inherit this inability in some degree.

The standard of perfection is the best guide for selection of breeders both from the standpoint of ability to transmit quality and ability to transmit high average egg producing ability. High average producers produce high average producers and the occasional "phenom."

The use of a pedigree system, trapnests and direct linebreeding will place you further ahead at the end of the third season than the use of out of line or indirect linebreeding, and substitute selection methods will place you at the end of five years.

PURE BRED POULTRY.

A majority of the farmers in our country are making more money out of their poultry and eggs than out of any other commodity they sell. Yet many of these very men cannot see the advantage of raising more full-blooded poultry and less mixed breeds, like so many of our farms are infested with. There are a lot of them right around here that wouldn't give five dollars for the champion cock at Madison Square, and it is the same in the Spring when you are trying to sell hatching eggs. They want to buy them at almost market price. When I get to talking poultry to some of them that can't quite get the idea of full-blood stuff, I try to convince them that they have not got a thing on their farm for the money invested that pays them any better than their chickens, and there are a lot of them that will agree with me, but at the same time if you try to sell them a good cockerel for five dollars, or a few pullets at two dollars a piece, they soon leave you. If the American Poultry Association lived up to its opportunities it would get busy with proof and argument that would convert a few thousand farmers into purebred poultry breeders and purebred boosters. Even the New York Central Railroad is now busy on a purebred sire campaign.

W. A. STEVENSON.

Queen Incubators

Hatch Strong, Healthy Chicks that Live and Grow

Chicks that hatch out weak and wobbly, and live but a few days, mean nothing to you but trouble and loss. They make one sick of the poultry business.

Most of the chicks you lose in the first weeks die because they did not have, when hatched, enough strength or vitality for a good start. Queen Incubators are famous the country over for big hatches of strong, healthy chicks that live and grow.

The Queen is the only Incubator that carries out the double Redwood wall pasteboard lining in iron and tin machines, retain the odors, to weaken and kill the hatching chick.

Redwood does not absorb the odor from the hatching eggs. Cheaper wood wall construction all around, and provides a double wall front, in the way of two separated doors.

The Queen will be turning out high percentage hatches years after the cheap machines have been junked.

Sold by good dealers all over America. Book sent free on request.

Management of Breeders.

In the selection of desirable birds for breeders, both male and female, the first consideration should be whether the resulting progeny are to be used for eggs, meat, or both. Only ideal specimens in any of these respects should be used. The breeder must base his selections not only upon external appearance, but upon type as well as color and amount of eggs produced.

It is important to choose females for the pen noted for their high egg productiveness, which fitly represents the commercial value of the individual. They should have laid the largest portion of their eggs in the fall and winter.

The male used in the pen should be the son of a prolific hen.

In this way high egg productiveness will be inherited from both parents.

Prepotency is of prime importance. The breeders should not only have the desired characteristics, but also the power of transmitting their qualities to their offspring.

Birds with signs of diseases or previous diseases should be entirely eliminated from the breeding pens. There is always danger of the diseased fowl transmitting these undesirable characteristics to their progeny. Hence the health of both the male and female in the past as well as the present should be noted, and birds free from taint of diseases and of good constitution used.

Hens that are two or three years old make the best breeders. They have reached their full maturity and have reached their maximum development and hence produce large healthy chicks. Moreover, the breeder has the advantage of studying their individual possibilities in their pullet year. All things considered, hens make the best breeders.

When it is necessary for any reason to use pullets for breeders, they should be mated to cocks and not cockerels.

However, using pullets as breeders is a very poor policy for the following reasons: A larger percentage of eggs set may prove to be infertile, the cause seeming to be immaturity; chicks also are likely to be weakly and succumb readily to disease. This is particularly true in case the pullets started to lay early in the winter and were pushed for eggs, their eggs being reserved for hatching after the pullets had laid themselves "out."

Just what number of females should be mated to a male is a matter of personal judgment, as the size of the flock, the variety kept, and the season of the year bear on this matter.

In a general way the number runs from 6 to 12 for heavy breeds in confinement, and 10 to 15 for medium breeds, i. e., Wyandottes, Rocks, etc., and 15 to 25 females to a male for the light breeds, such as the Leghorns or the Ancona. On range, about 6 males.

The male bird during the breeding season should receive extraordinary attention. One should see that he gets enough to eat, as he may be too attentive and thus starve himself. Toe nails should be blunted so as to keep the hens from getting their backs torn. The cockerel or the cock, whichever is used, must be free from lice or he will rapidly run down in flesh.

Before putting the breeders in the breeding pens apply a small pinchful of lice powder under neath the wings, also

Easy to Raise Baby Chicks!

New FREE Book **Outlines All Secrets**

There are real secrets of success that make hatching and raising chicks easy and highly profitable. And now these secrets are open to all! They are outlined in a wonderful Free Book entitled: "Dollars and Sense in the Poultry Business," by Prof. T. E. Quisenberry, one of America's foremost poultry experts. This book, based on over 25 years actual experience, is remarkably complete and is written in an easy-to-understand way. It outlines all the secrets you should know to get bigger hatches and to raise healthy, vigorous chicks.

I guarantee to bring success to poultry raisers who follow the unfailing methods outlined in my new book.

—T. E. QUISENBERY.

This Valuable 96-Page Book Tells

Rid Setting Hens of Lice and Mites

Wonderful New Remedy Banishes Lice and Mites Without Dusting, Spraying or Greasing.

Lice and mites cause many poor hatches. Setting hens infested with them will often leave their nest at the most critical time. Many dusts, sprays and dips are so strong that they often make eggs unhatchable. It is now easy to keep your sitting hens, as well as the rest of the flock absolutely free from all lice pests, and that too, without any trouble of dusting or spraying.

A few drops of this wonderful Imperial Lice and Mite Remedy given occasionally to fowls in their drinking water, keeps them entirely free from all vermin. It is guaranteed not to affect the eggs or flesh. On the other hand, it acts as a splendid spring tonic and blood purifier. Lice, mites, ticks and other vermin, positively will not stay on any fowl that takes this remedy.

Fine For Baby Chicks, Too

By all means protect your entire flock, especially setting hens and baby chicks from the ravages of Lice and Mites by using this wonderful discovery—Imperial Lice and Mite Remedy. You can do so without risking a cent, as it is fully guaranteed.

White Diarrhea Remedy Free

Send only \$1.00 to the Imperial Laboratories, Dept. 528, 2110 Grand Ave., Kansas City, Mo., for a regular full sized (double strength), \$1.00 bottle, postpaid. And further, as an outright gift to acquaint you with its merits, they will also send you entirely free, a regular \$1.00 package of Imperial White Diarrhea Remedy. If more convenient, you need send no money; you can pay the postman \$1.00 and a few cents postage on delivery of the package containing the two remedies. You need not hesitate to accept this offer, as the return of your money is absolutely guaranteed if you are not entirely satisfied.

HOW TO RAISE 90% OF YOUR BABY CHICKS

Kills Hatching

Many fanciers now use Egg-O-Latum, the great egg preserver, on all eggs for the market. It not only keeps them fresh but prevents hatching, thus protecting against the pirates who watch to obtain high grade hatching stock at market prices. Rub on—wipe off—does not show—Eggs will never hatch but keep fresh longer.

Egg-O-Latum is a soft, white, cerate wax odorless, tasteless, harmless. Applied by simply coating palms of the hands, then rubbing on eggs, a dozen a minute. Keeps eggs fresh one year. A 50c jar enough for 50 dozen eggs, \$1 jar for 200 dozen. If no dealer, order by card. Postman will collect. No extra charge. Handy as phoning.

GEO. H. LEE CO. Dept. Omaha, Neb.

particularly in the fluff below the vent.

The breeders must have plenty of space. Exercise is very essential, if you wish fertile eggs. This can be provided by feeding their scratch grains well dug into the litter. They then must dig for the grain and this digging stimulates circulation and promotes health.

The feed of a laying hen is identical with that of a breeding hen. The following ration recommended by Cornell is very good for breeders:

By weight, the following, 100 pounds wheat bran, 100 pounds wheat midlings, 100 pounds cornmeal, either white or yellow; 100 pounds 45 to 50% meat scraps; 100 pounds ground oats, 1 pound of salt.

This should be thoroughly mixed and kept all the time before the hens. The meat scrap contains a large percentage of protein, which is indispensable for high egg fertility.

Green food in some form is an absolute necessity. This increases egg fertility and the birds relish it in large quantities. When green food is withheld a 10% loss in fertility is noticeable. Mangle-wurtzle, kale, spinach, rutabaga and particularly sprouted oats are relished. If green food is not available, a monthly dose of Epsom Salts at the rate of one pound to a hundred birds, dissolved in water can be substituted.

Since infertility is one of the greatest sources of loss to poultrymen, it would be well to write down a few of the most common causes: Immature stock. Extremely aged stock. Weakened vitality of stock. Excessively fat breeders. Insufficient food. Insufficient exercise. Lack of animal matter. Lack of green food. Insufficient time between mating and the saving of the eggs for hatching. (At least two weeks should elapse). Improper management. Unsuitable environment. Too many females to a male. Fertility is the one main thing above all things, that the breeder is seeking, especially after mating his fowls. Any want of attention to any of the aforementioned factors may result in serious loss of hatchability of eggs.

Adam J. Miller.

Raising Chicks.

I always raise S. C. W. Leghorns and buy day-old chicks from some reliable hatchery.

I always raise S. C. W. Leghorns them about March 15, or April 1, not later than the latter date.

The first thing to do before you get your chicks is to give your brooder house a thorough cleaning and see that your stove is in good order.

Always start the fire a day or so before, to see that it is in working order and so that everything will be nice and warm when the chicks arrive.

Try to keep the temperature at about 100 degrees the first days.

I also give them only about one-third of the space the first days and gradually increase it as they grow older.

There should be plenty of clean sand on the floor and the litter thrown on top.

The first thing I feed is oatmeal for the first day, and then a good chick mash and chick feed and plenty of grass or some kind of greens. I give them only what they will clean up nicely and

Tells how to properly choose, write, eggs, incubators, cheap feed and PURE-BRED BABY CHICKS. This practical book worth dollars mailed for 10 cents. Berry's Poultry Farm, Box 115 Clarinda, Iowa

feed them five times a day, until about two weeks old.

Then I cut out one meal and start feeding growing mash.

Just as soon as possible, I put the cockerels in a house by themselves and get them in condition to sell and pay their board bill.

The pullets I keep growing, but do not try to force them at any time, but I gradually change from growing mash to laying mash and in addition to their scratch feed, I give them some whole corn for their evening meal.

With good care, I can have them start to lay in four and a half months. And then, they will be ready to go in the laying house and lay eggs when eggs are worth real money.

When chicks are old enough and don't need artificial heat any more, I put in some temporary roosts, I take several boards about four feet long and eight or ten inches wide and set them on edge and lock my roosts on. After a few evenings they will soon learn where to go.

Pa. F. Sheffer.

Respiratory Troubles.

With the coming of changeable weather, chiefly during the fall and early spring months, I have observed colds develop in fowls on many farms. Generally the colds were succeeded by serious attacks of catarrh, canker, and various forms of roup, and a resulting high mortality. It was my fortune, or misfortune to be placed in charge of a flock of over 1,000 Leghorns at a time when the mortality due to these respiratory diseases was over 10% per month. That is quite a loss when you stop to think of it.

It is my purpose to tell you how I successfully combated the trouble. Did I say successfully? I think that is the true word to use, though I did not entirely rid the flock of disease. I believe such a thing is impossible without killing every bird on the farm. But in this case in one month's time, I cut the loss down to a maximum of three birds a month and held it there for over a year, when I finally turned the flock over to another man.

First, I removed every bird that had a sign of swelling or yellow matter about the head or throat, though I left the birds with common colds in their pens. I put a dozen of the best of these "roupy" birds in separate coops, isolating them.

The next thing I did, was to open all the windows and to keep them open instead of closing them at every fall of rain or flurry of snow. When it became too cold, I put up muslin curtains and shut a very few of the windows. Then I cleaned out the pens and put in clean, dry litter, chiefly wheat straw, about six inches deep. When it rained or snowed in the windows, I replaced the wet straw with dry. Then to keep the birds active, I changed the system of feeding, giving grain four times and green food once every day. The first three feedings of grain were necessarily light, two pounds per 100 fowl. At night I fed 6 to 6½ pounds per 100.

Since the birds were under lights, I found it necessary to give them slightly more grain than I would have otherwise. But let me say here, that the birds had their first feeding within a

VACCINATED FLOCK - NON-VACCINATED FLOCK

VACCINATION PAYS

Altamont, Ill. Dec. 27, 1921.
Gentlemen: I used your A. S. L. Avian Bacterin on all my Rose Comb Rhode Island Reds that I took to the different shows this fall and not one of them even caught a cold. They seem more healthy and have more vigor after the treatment. I do not know whether or not it makes hens lay but my show pullets began laying five days after I gave them the third dose. I always use three doses.
I am at present treating some hens that have roup, their eyes being almost out of their heads. I have given them only one dose and can see that they are improving already. I think that by the time the three doses have been given they will be on the road to recovery and immune from further attack. I have been recommending your Bacterin to my friends.
Very sincerely yours,
EUGENE TESNARD.
Specialty Breeder of Pur Bre' Rose Comb Rhode Island Reds, P. O. No. 4, Altamont Ill.

AMERICAN SCIENTIFIC LABORATORIES, Inc., 157 W. Kinzie St., Dept. B-3, Chicago, Ill., U. S. A.

half hour after the lights were turned on, which was 4:30 a. m. At noon, they were given the green food, usually sprouted oats. I had the carpenter make some water stands, in which I put in heated water fountains. I found, that they kept a pail of drinking water from freezing effectively and without danger of fire.

I dissolved enough of potassium permanganate crystals in the water to give it a clear wine color. This was a preventive, not a cure for the roup, and helped to prevent the spreading of disease. The birds had dry mash at all times. Along the sides of the mash hoppers once or twice a week, I sprinkled a mixture of one pound of powdered sulphur and five pounds of mash. Where the birds had serious colds, they had this mixture almost continually, until they were better. And I truly believe, this not only prevented the spread of the trouble but it actually assisted in curing and in getting rid of it.

Do not misunderstand me. It will not cure canker and probably not roup, but I do believe, it will drive a common cold, even a bad one, out of a bird's head. At least I believe this is true, providing the fowls are given good treatment, as described above.

In addition, I gave the birds all the milk they wanted, one day each week; on another day, I gave them mash, moistened with milk at noon, in place of green feed, and every two weeks, I gave them a dose of epsom salts in the mash. My story is simple, plenty of fresh air, dry, deep litter, exercise, proper feeding, fresh water (never ice-water), steady care, and simple preventives. The birds soon became active, alert, apparently contented, and developed into real egg machines.
New York. Livingston Blauvelt.

The 300-Egg Hen.

In aiming to produce the super egg machine, the practical poultry man is obliged to consider several important factors—besides eggs. First, he seeks to produce a fairly good looking pullet that is near standard in weight. She must possess the stamina to stand up under the strain of rapid laying and still put away enough bodily reserve strength at the end of the pullet year, so she may reproduce herself in numerous sons and daughters, as good or better than their dam. It is not enough that she has laid many eggs. The quality must be there in point of fertility size, shape, color and shell texture. Such a hen is easily worth her weight in silver if she does no more, than produce prime cockerels for breeding purposes.

Nowadays, the practical poultry man is casting a speculative eye over his most promising candidates for the breeding pen. If each hen wears a numbered leg band, he should know something of her moulting and brooding habits and that helps a whole lot. If in addition to numbered leg bands he has done ever a little trapnesting, say during a few days each month, he has a general idea of the number and quality of eggs each hen has laid and that is a whole lot better. If he has trapnested every day in the year, he holds an exact record of each individual—whether she had the strength to lay while moulting, whether

The CYCLE
DUPLICATES THE MOTHER HEN

This practical metal machine closely duplicates conditions of actual hen's nest. Nest is scientifically heated from above and around the eggs. Perfectly ventilated. An accurate, automatic regulator controls heat.
The Cycle Hatcher is less expensive to operate, and requires less care than the setting hen. Costs less than any machine of equal quality on the market.
Will not swell, crack or warp like a wood incubator.
Round glass window in top of hatcher enables operator to read thermometer without opening the machine.
The Cycle Hatcher being light in weight can be moved to almost any location. Requires but little space. Hatches any number of eggs up to 50 on two or three quarts of oil. Two or more Cycle Hatchers with capacity of 50 eggs each produce more and better chicks than one large machine.
Let us send you a free booklet containing many suggestions about new methods of poultry keeping that will interest you by showing you how you can bring more chicks to maturity with less work, less time and greater profits.
This book also lists and describes many accessories for poultry raising, including Brooder-Hatchers, original Philo System Coops, Galvanized Iron Fireless Brooders, feed and water dishes, and scores of other items. Write for it TODAY.

Wyckoff's S. C. White Leghorns

AMERICA'S BUSINESS HEN

Remember that we are the originators, and for over 40 years specialty breeders of the justly celebrated WYCKOFF STRAIN of S. C. White Leghorns, the most prolific strain of poultry in America today. Place your orders at headquarters and make no mistake.

SPECIAL ATTENTION is directed to the fact that, almost without exception, the most successful Leghorn egg farms in the country, and those making the highest records at the greatest laying competitions in the world have been proven to be of Wyckoff foundation.

EGGS FOR HATCHING

from the most carefully selected matings. Our breeding matings for 1922 are made up with the most exceptional lot of carefully selected stock in the country, barring none. Every egg furnished will be from a grand lot of special selected birds, representing our highest quality stock in every particular. For size, strength, vigor and laying qualities, together with the true Leghorn type, they are unequaled. POSITIVELY NO SECOND GRADE OR IMMATURE BIRDS MATED, AND NO ORDERS FILLED WITH EGGS FROM "FARMED-OUT" STOCK OR OTHER BOUGHT UP JUNK. WE ARE BREEDERS, NOT HUCKSTERS. Place your order for some of the eggs from this famous high grade stock, and get in line with the most profitable era ever known in the poultry business. Send for free catalog giving prices and descriptions, with numerous photographic illustrations showing type of the birds and sections of this most completely equipped plant.

CLOSE-TO-NATURE COMPANY, 38 FRONT STREET, COLFAX, IOWA

SAVE YOUR CHICKS

BY PROVIDING GOOD BROODERS

Make them yourself, in spare time, from scraps of lumber or store boxes. Hundreds of thousands of chicks are lost each year that might be saved if suitable brooders were at hand. Even if you are equipped with good large Stove Brooders you can use several of these small brooders for small lots of chicks for which you could not afford to run the large Stove Brooders. Often, when hundreds of chicks are brooded in one lot there are some which cannot keep pace with the crowd and these, if separated and put in a small brooder, will develop much better and more rapidly and thus be profitably saved. These Brooders are easily made with saw and hammer from the full instructions and photos which we furnish for three different styles suitable for 25 to 100 chicks. Instructions and photos for one fireless and two different Lamp Brooders mailed NOW, only \$2.00. Remit by Draft, Money Order or Registered Letter.

CASH PRIZES WILL BE PAID FOR BEST SUGGESTIONS FOR IMPROVEMENT AND BEST REPORTS.
EASY MADE BROODER COMPANY, BOX 724, LIMA, OHIO

1000 Eggs in Every Hen

New System of Poultry Keeping—Get
Dollar A Dozen Eggs—Famous
Poultryman.

TELLS HOW

"The great trouble with the poultry business has always been that the laying life of a hen was too short," says Henry Trafford, International Poultry Expert and Breeder, for nearly eighteen years Editor of Poultry Success.

The average pullet lays 150 eggs. If kept the second year, she may lay 100 more. Then she goes to market. Yet, it has been scientifically established that every pullet is born or hatched with over one thousand minute egg germs in her system—and will lay them on a highly profitable basis over a period of four to six years' time if given proper care.

How to work to get 1,000 eggs from every hen; how to get pullets laying early; how to make the old hens lay like pullets; how to keep up heavy egg production all through cold winter months when eggs are highest; triple egg production; make slacker hens hustle: \$5.00 profit from every hen in six winter months. These and many other money making poultry secrets are contained in Mr. Trafford's "1,000 EGG HEN" system of poultry raising, one copy of which will be sent absolutely free to any reader of this paper who keeps six hens or more. Eggs should go to a dollar or more a dozen this winter. This means big profit to the poultry keeper who gets the eggs. Mr. Trafford tells how, if you keep chickens and want them to make money for you, cut out this ad and send it with your name and address to Henry Trafford, Suite 860G., Court Bldg., Binghamton, N. Y., and a free copy of "THE 1,000 EGG HEN" will be sent by return mail.

WAIT! LOOK at MY PRICE

My 1922 offer is the sensation of the incubator industry. Others can't understand how I can sell such a superbly built, scientifically correct hatching machine at such a astonishing price. My answer is that I have smashed all records for big production—built in such huge quantities that I can afford to sell at this almost unbelievable price—and still make an honest profit. Furthermore, there is no "Profitless-ness" about the

she went broody, how long and how often. If she is of the heavier breeds and did not go broody during her pullet year, he may have discovered a rare jewel.

To me the proposition of trapnesting has always held an especial fascination and is by no means the "bug bear," so many seem to consider it. "Knock down" trapnests are easily secured from manufacturers of portable poultry houses. The daily record charts we secure from a drawing material or engineering supply concern—large sheets of heavy paper laid off in squares 4 or 5 to the inch and known as "graph" or "chart" sheets. We number the days of a month across the top, one number to each square and down the left side we write the leg band numbers of 75 birds. For example, pullet No. 37 lays an egg on the 2nd of the month, we place a small check mark opposite No. 37 and under the 2nd day, so that at the end of the month we have a complete picture of what each pullet has done. If a bird appears sick, we place a circle opposite her number in the square under the date when the sickness was first noticed. When broody, we place a cross to her debit from whence we can count the number of days, until she lays again. Some birds lay while broody. Some occasionally lay double yolked eggs. Others lay, on occasion two eggs in one day, while others eat their eggs. This knowledge of the individual birds we consider invaluable as breeding data. Were we interested only in quantity egg production, it would not pay.

When I am obliged to be away from home, my wife, or one of the children release the pullets and record the eggs, visiting the coops at about 9:30, 11 a. m., 1 and 4 p. m.. In the breeding season, we write the number of the hen on the egg she lays, and hatch all the eggs of each hen in a mesh bag with a tag enclosed, bearing her number. When the chick is hatched, we toe-punch or wing-band each chick, so that we can always determine its exact parentage and it is most interesting to observe the peculiarities of the parents show up in the offspring when they mature.

So many poultrymen, especially beginners, breed from immature pullets. Fully nine out of ten who come to us for breeding stock, ask for pullets, aiming to cram them for eggs all winter and breed them in the spring—a practice very much like burning the candle at both ends. It is far safer to divide your flock, say two-thirds pullets for winter eggs and one-third hens, held back in separate quarters, without forcing, for mating in February.

Too much emphasis can hardly be laid on the care of breeding hens during and after the molt. They should have plenty of green feed, buttermilk, and plenty of deep, clean litter. Mix the ordinary laying mash with an equal quantity of bran and give them a scratch grain of equal parts cracked corn with wheat or barley, no oats. If green feed is difficult to get, try a little mixture of dried beet pulp and alfalfa meal, soaked in boiling water (in a covered pail) over night. In the morning, add 5 or 10% mash and a little salt to whet the appetite—it should be fed in the morning in a crumbly consistency, but never allowed to become fermented or mouldy. Let these old hens scratch

Profitable Leghorns

Cockerels now ready for the poultryman who is breeding for eggs. Deep bodied, broad backed, chesty heavy combed, low built, sturdy birds—every one toe punched and range raised from our own Queensbury Special Pens of hens that have laid more than 200 eggs in the trap-nests.

about and dust themselves in the lee of some sort of windbreak, whenever the winter weather permits and they will benefit greatly. Do not become impatient if their combs do not redden—plenty of time for that in February, when mated and fed the regular laying ration.

I know one poultryman, who keeps over a thousand birds and clears better than \$4 per bird per year. His 300 hens are never allowed to lay from molting to incubation time, while his pullets work hard under lights, throughout the winter. During February and March, his hens, rested and rejuvenated, start in to lay more eggs and larger eggs than the pullets and these big hen eggs hatch up to 95% big, strong chicks. When you figure the lost market value of the egg that does not hatch and the valuable space lost in the incubator, it pays to give especial care to the breeding hens.

The choice of a cockerel should never be left to chance. In breeding for egg yield, the chief factor, other things being equal, is the laying quality of your cockerels' mother. If you have not pretty exact knowledge of your cockerels' dams laying qualities, it is far wiser to purchase a good male bird, whose pedigree is known. Do not be afraid to pay \$10, \$15 or even \$20 for him. Two other points to remember: the longer you wait into the breeding season, the more you pay; and, when you secure a good bird, be careful not to let his comb or wattles freeze, as such an affliction is very painful and may greatly reduce his activity.

Much is being said and written nowadays about the hen that has laid around 300 eggs a year. Personally, I should regard such a bird as a serious liability in the breeding pen. Had she been held down to say 250 or 260 eggs, I would like her better. Let us look at it this way. To travel at the rate of 300 eggs per year, this bird's heart and ovaries may have been severely strained. How much stamina can you depend upon this hen to hand down to her offspring? How many of such phenomenal layers, according to the official records have been able to reproduce themselves? Oftentimes the winner of the laying contest, breeds from his winning pen only to be surpassed by some farmer from nowhere, with a fresh, healthy flock, headed by a fine cockerel of excellent laying ancestry.

The super hen with a record around 300 eggs or more, oftentimes lays a defective egg, the quantity is there, but seldom the size, weight and virile hatching quality; and it is a well-known axiom of all intensive breeding operations, that the undesirable qualities are handed down as certainly as the desirable.

Not so long ago, we were all amazed at the performance of the 200 egg hen. Now she is an accepted fact along with the aeroplane and wireless telegraphy. Some day the 300 eggger may be just as common, but I think it is the consensus of opinion among well informed poultrymen that for the present we can more safely aim for a substantial record of 200 eggs per year, and stand up under the job, than to aim for the 300 eggger, that is all too liable to fall down.

N. J.

Frank Habberton.

A 600-Egg Candee Incubator, one section, top cut away to show compartment radiator, automatic temperature regulator, etc. An enlarged view of compartment hot water control valves.

Get the Right Start With CANDEE

CANDEE Incubators, constructed on the fundamentally right principle, give the best possible percentage of strong, healthy chicks—economy in operation—minimum labor. In the CANDEE, eggs can never Overheat or underheat. This means bigger hatches and chicks with greater vitality. These superior conditions are made possible by the exclusive CANDEE DOUBLE TEMPERATURE CONTROL—an automatic regulator at heater plus an automatic regulator at each 300-egg compartment—that gives correct temperature under all conditions, and by a perfected ventilating system that does not rob the eggs of their original moisture.

IMMEDIATE SHIPMENT GUARANTEED

Trapnesting the Breeder.

To trap, or not to trap, that is the question that faces all breeders of pure-bred poultry at this time of the year.

The idea of trapnesting is to pick out the best layers in the flock; to know the exact number of eggs laid; and by breeding them to sons of other good performers, to gradually build up a strain of high producers. During the past few years, with the advent of the 300-egg hen, much has been done, both by the experiment stations and private breeders, to determine the real value of trapnesting. Consequently there is much evidence, both pro and con. It stands to reason, some say, that if high-producing hens are mated to sons of other high-producers, that, as "like produces like," the pullets of these matings will likewise be great layers.

But consider; can the hen that lays perhaps 300 or more eggs in her pullet year be in any sort of condition in her second year to put real vitality into her offspring? Think of the enormous strain that a hen is put under in order that she can manufacture such a concentrated product as an egg, almost every day in the year, and still keep up her own bodily strength. And so it has been found that the offspring of these high producing hens are very often stunted, low in vitality, and, strangely, very poor layers. Consequently, many breeders have become discouraged, saying that we have reached the limit of egg production and that the 300 egg hen is a freak, for she can not reproduce herself.

On the other hand, however, there are those breeders who have been successful. If we should study their methods, we should find that, having found their high producers by use of the trapnest, they selected for breeding only those birds, which show strong constitutional vigor, even though they did not make as high a record as some other hens, which had lost their vitality by production. And so it is these vigorous, high, normal producing hens that impart to their progeny their own egg laying ability.

Can we not say then, that any breeder desiring to build up a high producing strain, must certainly trapnest his breeders, yet always cull closely, in order that only those hens having the strongest constitutional vigor coupled with high egg production be used to produce the next generation? It is only by so doing, that success may be obtained.

N. J. John Capen.

Prices for Breeding Stock.

While being always in favor of pure-bred poultry as against mongrels, or barn-yard chickens, I am also an advocate of adequate prices.

For instance, you can go to any butcher shop and buy the carcass of a fowl for from one dollar to two, or four dollars, depending on the weight, and yet you will see poultrymen advertising pure bred hens and cockerels for the same amounts.

Let us do a little figuring. The standard types of chickens are worth more in money than the common or no-class kind; they cost more in money and care than the other; and the eggs from a good strain are worth several times the price of eggs sold for culinary purposes.

THE VENT TREATMENT

ONE PIECE OF Stanfield's Lice Kill

The size of a pea rubbed on a fowl just below the vent is GUARANTEED to kill every louse on the bird. If it fails to do this money will be refunded.

LOOK CHICKS, EGGS, PULLETS

BEST QUALITY
S. C. White Leghorns FREE Feed with each order. Get our low prices at once.
Houck's Leghorn Farm Box 77 Tiffin, Ohio

We notice that some advertisers are offering hatching eggs for two dollars a setting. The object of this article is to plead for better prices, not just for the sake of getting the money, but because a good article is worth more than the ordinary. True it might appear, that the gospel of pure-bred poultry would be retarded by a boost in price but if the producer of pure-bred eggs is going to sell them at very little above what eggs are sold for every winter in the open market, he very soon will not have enough cash to keep his flock up to standard.

Just suppose, a man buys a good cockerel to perpetuate his strain. He cannot buy a real good one under \$25 to \$50, according to the breed or strain. Is that man justified in asking only \$3 for the progeny at maturing? Most of us, I hope, are in the poultry business partly because we love it. But expenses are multiplying and, although feed is not quite so high as it was, we have to pay more taxes and we should figure more closely on interest on money invested, depreciation of buildings, and our own time.

I had one man write me to know if I had an A-No. 1 cockerel I would sell for \$5. I told him if I had an A-No. 1 cockerel, it would be worth \$50.

The advertising charges are very reasonable, considering the number of people reached, but too often the item is not considered in establishing the price asked. Cost of correspondence is another item to be taken into account. So the moral is—breed good poultry, the best you can, then ask for pay, honestly, for what you have invested in money, time and yourself.

Ohio. — Claud Taylor.

"Jordan's Roost."

"The hen that's worthy of a boost
Is the kind you'll find at Jordan's
Roost."

Single Comb White Leghorns—why do I boost them? One would come to the conclusion after reading all the articles in the poultry papers, that the keepers of Single Comb White Leghorns would have empty egg cases all winter and that the Leghorns' combs would all be frozen. Nay, not so. I live in Minnesota, where the temperature in winter often hovers around 40 degrees below zero and there's never a frozen comb; and the eggs—well, the heaped up egg basket and the cackling tell the story.

Last year, I raised ninety purebred Single Comb White Leghorn pullets, hatched March, April and May. Two started to lay Sept. 18th, and gradually the rest came along. In October, they laid 385 eggs; November, 672, and December, 897. And from January 1, till Sept. 1, I gathered in 14,000. That was about 19 eggs a month per bird.

How do I feed? Sour milk, grit, charcoal, oyster shells and plenty of fresh water before them at all times. For green feed I gave them cut-up potatoes, cabbage, carrots and beets. For scratch grain I gave them wheat and corn. And their mash was equal parts of ground oats and bran.

My day-old chicks I started on sour milk and oatmeal, gradually adding chick feed, screenings and dry mash. I always use limewater in their drinking

The FIRST Oil Burning Colony Brooder-Who Made It?

The First
Oil Burning
Canopy
Brooder

Here is the Answer

There has been some confusing statements made with regard to who originated the oil burning canopy brooder. In order that the poultry raising public may know the FACTS—know WHO is the actual originator and patentee of this now very popular brooder, we show herewith the FIRST one ever made.

It was originated and designed by H. M. Sheer and tested for several years before being offered to the public. To set at rest for all time, the question as to WHO did originate it, we illustrate the first one ever made and as further evidence give the list of patents below, which also cover other equipment originated by us, is conclusive as to WHO originated the Oil Burning Canopy Brooder.

Patent No. 961,654
Patent No. 977,973
Patent No. 1,005,660
Patent No. 1,056,595

Patent No. 1,065,850
Patent No. 1,123,535
Patent No. 1,149,959
Patent No. 1,262,397

Patent No. 1,273,679
Patent No. 1,280,091
Patent No. 1,285,428
Patent No. 1,373,362

Patent No. 1,392,708
Patent No. 1,392,709
Sol-Hot
Trade-Mark 134,438

From this FIRST AND ORIGINAL brooder, the Sol-Hot and then the Super Sol-Hot Heaters and Brooders were perfected. The history of the development of the Wickless Oil Burner is a very interesting story. It is being made ready for publication. It will tell, step by step, how the present highly efficient Sol-Hot Heater has been developed. You will then appreciate as never before, after reading this story, what a vast improvement and superior heater the Super Sol-Hot is over anything ever offered to the poultry public.

All Metal Vaporizer
Patented

Why the Super Sol-Hot is Supreme

The reason the Super Sol-Hot Heater is so far ahead of all other types of heaters is because of my patented float oil control. The Super Sol-Hot is the **only** heater on the market with a **positive**, constant oil level. The sectional view below shows how positive and constant the oil level is maintained in the Super Sol-Hot with my patent float control. The float is placed at the bottom of the oil container just below the filter. This float operates automatically, the same as the float in a carburetor of a gasoline motor and maintains a constant oil level that cannot fluctuate and flare up as other heaters do that depend simply on the open pipe oil feed, an old method on which patents have expired but which some are claiming as new and original.

In ordinary heaters with **open pipe feed**, there is nothing to control the oil feed and the flame naturally flares up every time the bottle feeds, burning much larger at first and gradually growing smaller until the bottle feeds again. This is

Sectional View of Super Sol-Hot

The patented oil level control is accomplished by means of a float and thermostat in the lower part of the oil chamber directly under the filter. This float operates automatically the same as a float on the carburetor of a gasoline motor—it never requires attention—never causes any trouble. The thermostat is made of brass carefully and thoroughly tested. Owing to the fact that it is enclosed and sealed in bottom of oil container and that varying changes of temperature never subject it to more than 1/32 of an inch expansion, it will last a lifetime without ever requiring attention—it is never subjected to over-expansion like thermostats which are used on incubators where they are exposed to the direct radiation of the hot air.

PATENTED MARCH 29, 1921.

why an even flame is impossible without a constant feed control. This is why a low flame can't be maintained in ordinary burner with open pipe feed, and often the feed drops to a point where the flame goes out entirely.

H. M. Sheer Co.

H.M. Sheer, Inventor Designer and Patentee

Two Outstanding Features: Float Oil Control and Metal Vaporizer

The "float oil control" in Super Sol Hot Heaters is the big outstanding advantage of my heaters over all others, and together with the Metal Vaporizer, which does away with all wicks and asbestos ring, makes Sol-Hot Heaters **incomparable**. There is none that approach them.

They give you a brooding equipment which you have hoped for—wished

for, yes, prayed for. All you have to do is to set the size flame you want when you start it, keep the bottle supplied with oil and forget all the old troubles so common with

all other heaters. If you want a low flame you can have it without fear

or danger that it will go out or fluctuate in the least. Our patented Metal Vaporizer

does not carbonize like the old-fashioned asbestos ring vaporizer, and can easily be removed and cleaned.

Asbestos ring vaporizers can also be used on the Super Sol-Hot, but why should anyone use the old-fashioned carbonizing asbestos ring vaporizer when this new better equipment is now available?

Why Buy Makeshifts—Get the Best

Ever since I made the first Oil Burning Canopy Brooder years ago, Sol-Hot Brooders have always maintained their lead in the public's approval, strictly on their merit.

This season I have attained that for which I have strived for years, namely, to perfect a positive automatic oil control heater—one without valves to adjust—no springs or mechanisms of any kind. With a Super Sol-Hot you simply light the burner, that's all—no hand adjustments—the burner won't go out—won't overflow—won't smoke—burns evenly all the time. My new patented oil control entirely eliminates the element of human control—it's the sensation in the poultry equipment field this season—nothing like it.

Don't Be Misled—Be on the Safe Side

When you are in the market for an Oil Burning Canopy Brooder, come to the **ORIGINATORS** for it. Get it at headquarters. Why buy the makeshifts?

With a Sol-Hot Brooder you never have to worry about your chicks—you know they are safe and comfortable all the time, because Sol-Hot is always dependable—always on the job. Sol-Hot Canopy Brooders are furnished in three sizes, 32, 42 and 52 inches in diameter. Remember, too, we furnish the correct size

Sol-Hot Heater for each size brooder—not the same size for small and large brooders as some do. For the "back lotter" or poultryman who has only a few chicks we also furnish the "Baby Sol-Hot" with 22-inch canopy.

Made in 5 sizes suitable for Small Brooders and Incubators from 60 egg and chick sizes to 3000 egg and chick outfits.

Send your name and address and we will send you free and postpaid, beautiful catalog folder in colors, telling all about Sol-Hot Heaters and Brooders. How they are made — why they are better — why it is the equipment you should buy,

Dept. P, Box 303, Riverside, N. J.

water, so am never bothered with the dreaded white diarrhea or any bowel trouble. I take one pint of air-slaked lime in four quarts of water. Let settle, then add one-half cup of this limewater to a quart of drinking water.

For their drinking troughs, mash troughs, etc., I make a trough placing two boards of the desired length, lengthwise at right angles and nail. Then nail boards across ends. Then at center ends I nail a 2 in. piece about a foot in length in upright position. Then I take a board the length of trough and thru the center of each end, bore a small hole. Pass a bolt thru 2 in. piece into this hole at each end, in such manner that board revolves at slight touch. Your trough is now ready. The chicks and old hens have a tendency to roost or rest on, or get into trough. Now when they hop onto this board, it swings around forcing them off. This keeps the contents clean.

I have never advertised, but feel so pleased over my results, thought I would call my poultry farm "Jordan's Roost" and on stationery, envelopes, etc., have the little rhyme at heading printed thereon.

Minn.

Mrs. E. A. Jordan.

Winter Eggs Yield Profits.

Any old hen will lay in the spring and summer, but it takes a good hen and careful feeding to secure eggs when they are ninety cents and one dollar a dozen.

You must cull your flock carefully, to be sure you have only good hens in your flock. It not only makes more room for the thrifty hens, but also lessens your feed bill. Both tend to increase your profits.

Careful feeding is one of the most important factors in securing winter eggs. I have kept my flock of twenty-five Single Comb Brown Leghorns on this ration for two hard winters and secured an abundant flow of eggs all winter. At daylight, I give them a light feed of scratch grains in a deep litter. At noon, sprouted oats are fed. In the evening, about one hour before roosting, I give them a heavy feed of scratch grains, also fed in a deep litter. In very cold weather, I add extra whole corn to the evening feed. It is an excellent heating food.

In addition to this, I have the dry mash hoppers open at all times with a good commercial brand in them. In separate hoppers I have grit, oyster-shells and charcoal. And above all, I give them all the fresh water they want. A little money spent on a non-freezing fount, will soon be repayed in your extra egg profits.

I get much better returns by feeding all my grains in a deep litter. It keeps the hens active, warm, and out of mischief. It also provides excellent exercise for hens, especially in the winter season, when their natural digging ground, the earth, is frozen up. But bear this in mind: a dirty, musty litter is worse than none at all.

Like most beginners, as soon as it would get cold, I would fasten up my coops tight. For one season I experimented with an open-front house, and now I would not use any other. I have kept my hens in this open-front house for two of the hardest winters known in this section of the country and the

STOPS PREVENTS ROUP

SID SMITH SAYS: Last year my O. D. Mitchell's Roup Germicide was used on high priced poultry at the big Chicago Coliseum and Stockyards Poultry Shows where it saved the lives of valuable prize winning birds. That's proof it ought to be good enough for you, isn't it? I want to prove to you that it's the very best preventive and cure for Colds, Roup and Cholera you ever used. Use it as a preventive and keep your flock well. No matter how bad your chicks may be, I positively guarantee a cure. When

hens layed all the time. In very cold weather I lowered a muslin curtain; and on very cold nights I lower a canvas curtain, the entire length of the roosting space, leaving it hang two or three inches away from the edge of the dropping boards. This makes a free circulation of pure, fresh air, without any draught on the hens.

Penna. Geo. Lynch.

The Fancier in the Showroom.

The Poultry Show season is with us again. It is to the fancier's life what the Christmas tree is to the young folks, the big time in the year, he has looked forward to. For weeks and weeks he has been nursing along those good ones. They have received extra care and extra feed. He has handled them dozens of times, until they are so tame, it seems, they wait to be picked up. He now has his big cock bird in fine condition. The hens are in grand good shape. The best pullet has a little ticking in one wing feather. He knows all their faults and all their virtues.

The day before the show opens, the shipping coops are cleaned, that the birds may not be soiled in shipping. He takes an old rag which has been brought along for the purpose and cleans the sides of the cage, before putting in his birds. Perhaps the cage does not contain litter enough, so he goes to the end of the hall and brings more, that the birds may not soil themselves with the droppings. He is very careful in placing the birds in their cages, lest a feather may be broken.

One hen is inclined to eat too much, so he places a notice on the cage, not to feed her. He feeds this bird with care, knowing she would not look good with a big full crop. He stands in front of the cage, containing his cockerel and four pullets, studying one, then the other. Then he looks over the cockerels; perhaps it would be better to place that good cockerel that stands a little high, in a lower coop.

He takes another look at his hen entry. Four very even pullets. My! they are grand! But the cockerel's comb seems rather heavy. He decides to put the smooth-comb cockerel in the pen. There! that is a big improvement. He brushes them tenderly with a silk handkerchief. They really seem to enjoy it. He washes their face and their blouses tell him, they feel better and they look better.

He opens a package and they look with critical eye, knowing it is dainties for them; a little hamburger steak. The eagerness with which they devour it and the way they plead for more, remind you of the children at the table, who have had their plate of ice cream, but oh! it was so small.

Walking up and down the aisle, he looks them over again and again. He stops to brush a feather here, or arrange the litter there. The birds are finally judged and with a ribbon in every class, he is well satisfied. Blue ribbon on pen, my!

"I am glad, I changed those cockerels," so the delighted fancier muses along the aisle. He spends the day discussing the birds with his fellow fanciers. His very actions show his love for his birds.

Penna.

George W. Heck.

This is the greatest year ever known for making money in poultry.

Raise More Chicks!

You can make many times more money and profit per dollar invested through poultry this year than ever before. Whether you use an incubator or buy day-old chicks, your profit in poultry will depend entirely on how many chicks you raise to maturity, and that depends on the hover.

The International Sanitary Hover Is Guaranteed To Raise Better Chicks, Stronger Chicks And A Higher Percentage Of Chicks Than Any Other Brooding Device Made.

"My Sanitary Hover has brooded and cared for 342 chicks—every one I have placed under it during the last three months. Barring accident, the International Sanitary Hover will raise 100 per cent of the chicks placed under it." Mrs. C. A. Buckland, Warba, Minn.

"You will be glad to know that I am still using the Sanitary Hovers. I have tried the larger brooder, but I do not care for them for my purpose. The International Sanitary Hover is the best I ever used." Maurice F. Delano, Vineyard Haven, Mass.

The International Hover is an exclusive, patented article built on principles entirely different from the ordinary hover, and accomplishes much better results.

Fresh Air Without Drafts

It has a canvas curtain that permits a constant supply of fresh, pure air into the hover, without any draft whatever. It is the only hover in which this ventilating curtain can be used, because the International is the only hover that has a heating unit entirely walled away from the chick area.

Because of this perfect ventilation, there is no smothering of chicks due to impure or foul air. There is no loss

of chicks from cold, because the curtain prevents all drafts.

Warmest at the Curtain

The heated air (there is no direct heat) is circulated by scientific principles against the "ceiling" or dome of the hover, radiating warmth down over the backs and bodies of the chicks. The heated air strikes the outer circumference first. Hence, the International is warmer at the curtain than at the center, keeping the chicks thoroughly distributed over the area, and preventing crushing. The hovering area can be maintained at any temperature desired, no matter how cold the weather.

The lamp unit is enclosed in a cell that is entirely walled away from the chick area—no possibility of fire, smoke or oil getting into the hovering space, or any pipes or openings to cause drafts in the hovering area.

The International is complete in itself, weighs 18 pounds, and can be set anywhere or carried anywhere as easily as a basket. The entire heating unit lifts out by a handle from the top, for filling or cleaning—no stooping over to get it. A peep-hole on top shows you the condition of the lamp. You can pick out the thermometer from the top and know exactly what the temperature is at the chick's level. 100 chick capacity—the scientific size.

Write at once for your copy of booklet, "Better Than a Mother Hen." Or better still, place your order now with your dealer or order from us. You can get the International Sanitary Hover Complete with electrical unit for \$20.00, or complete with oil lamp for \$13.50. Or one hover with both heating units, which are interchangeable, for \$25.00.

Electric Brooder Heater

Heat Your Brooder with Electricity

No dirt—no odor—never goes out and always at the same temperature. Just a turn of the switch and you have heat. Why go along with dangerous and unreliable kerosene or alcohol lamps in your home-made brooders when you can install electricity for less than cost of an old style brooders. All you need is a box and one of our heaters. Easily installed by two screws. Used on any socket, alternating or direct current, 110 volts for city use and 32 volts for the farmer.

Made in different sizes for 32 or 110 volts at the following prices, postpaid:
 60 watts for Brooder 14x14x10 inches, 12 to 36 chicks\$2.40
 100 watts for Brooder 20x20x10 inches, 36 to 72 chicks 2.75
 150 watts for Brooder 25x25x10 inches, 36 to 108 chicks 3.25
 The following are made for 2 heats in 1 unit:
 60 and 100 Watts\$4.00
 90 and 150 Watts 4.50
 Prices on request for larger Brooder Heaters. Write for literature and additional information.

Line Breeding.

By **A. F. Rolfe.**

How familiar these words sound. Long have we read of the wonders—and wondered at the intricacies—of Line Breeding. We have stood afar, and fixed our longing gaze on that highest of stars—Line Breeding.

But, what is Line Breeding, anyway? What does it mean, and what will it accomplish?

Line Breeding! Oh yes! Line Breeding is—er-r—, why, line breeding is where you succeed, and inbreeding is where you fail. It is simple, doncherno, line breeding is, all you have to do is— is—, oh, I don't no, after all, you'll have to ask some of these fluent "writer guys."

And that is about the sort of explanation you can expect if you ask the meaning of line breeding of some horny-handed, sure-nuff, honest-to-goodness chicken raiser who is successfully producing enough meat, eggs and prize winners to pay his feed bills, labor bills, overhead and taxes, and all the rest of the expenses, and still have a little left to show for his work.

With the influx of spring literature, one should be able to solve this simple (?) problem. Line Breeding? Why Line Breeding is the only possible road to success.

You just go ahead and raise as many chickens as possible from this pair and— and, you have started line breeding. Started, remember, that's all. After you get a nice bunch of youngsters on hand you will next need plenty of white paper, black ink, and a good substantial pen so you can start drawing charts which would make a complex geometrical problem look like a straight line, and, if you are able to understand what it all means after you finish, pat yourself on the back, for you will be smart. However, what it all means is this—you have reached the point where you face "absolute ruin if you allow a single drop of foreign blood to get into your flock."

You must breed father to daughter; son to mother; grandfather to the second cousin of the maternal son's sister; third cousin on the sire's side tracing through the uncle's brother's niece to the second generation progeny from the seven-eighths family on the dam side—be careful you don't get too many "dams" mixed up in this breeding work, and above all, be sure that the two birds you mate are always of opposite sexes. If you are lucky, you will be able to continue this indefinitely, and stay in business as long as you have enough of a bank roll to pay the expenses.

If, however, you are able to keep clear of the "hobby hatch," and you don't get just the results you wish, it is probably because you have made a slight mistake somewhere, and all there is for you to do is to get some new blood— BUT, go easy here, for this is the really vital point; you must be careful: it is extremely important, in fact all—essential, that the new blood be of the same general "line."

Then—yes, then! Right then you will be ready to—what?—why to start all over, and if you are careful you will have just as good chances of success as you did in the beginning.

LOW COST OF EGG PRODUCTION WITH BASIC FEEDS

H. R. Furguson of Joliet, Ill., has proven the value of Basic Feeds with his flock of S. C. W. Leghorns. In addition to winning 1st Cockerel, 3rd Pullet, 2nd Hen, 4th Hen and Best Shaped male bird at the Illinois State Show, he also received during the month of December 3093 eggs at a total feed cost of only \$34.15 or exactly ONE AND ONE-TENTH CENT PER EGG.

HERE'S ANOTHER RECORD

In the January issue of American Poultry Journal an editorial article on page 21 made mention of a certain poultry raiser who realized a profit of 90c per hen during the month of November. The Poultry man referred to in this article was George Jennings of Glenn Ellyn, Ill., a USER OF BASIC FEEDS. ONE CENT PER EGG WAS THE TOTAL COST FOR THE MASH AND GRAINS CONSUMED BY HIS LAYERS.

EGG COST ONLY ONE CENT PER EGG

J. C. Catlen of Tipton, Indiana, another Basic Feed user, during the last 16 days of December gathered from his 101 April hatched Ancona Pullets 987 eggs. His cost for Basic Feed Laying Mash and Scratch Grains consumed during the same period was \$5.38. For sprouted oats and beets \$1.57; straw and lights \$3.50—a total cost for all supplies was \$10.45 or only SLIGHTLY MORE THAN ONE CENT PER EGG.

Such Are The Results Of Feeding Basic Feeds

Here's Proof

That

BASIC FEEDS FOR POULTRY

Are the Feeds for the Commercial Egg Farmer or any Poultry Man Who Wants PROFITS

EASY NOW FOR ANYBODY TO RAISE BABY CHICKS!

**A Wonderful New Book by a
Practical Expert, Given Free
—Outlines All the Secrets
of Success.**

Hatching and raising healthy and vigorous chicks is easy and very profitable work if proved methods of success are followed. Anyone now has the opportunity of making their back yard produce real profits. For just a few minutes' time each day and at very little cost you can raise fine, fat broilers for your table and to sell at high prices.

All these secrets of success in chick raising are clearly outlined in "Dollars and Sense in the Poultry Business," a wonderful new book by Prof. T. E. Quisenberry, one of America's most prominent and successful poultry experts.

This 96-page book, written in an easy-to-understand way, contains hun-

dreds of valuable pointers. It tells how to avoid dead chicks in the shell; how to operate your incubator to insure big hatches; how to start and feed chicks successfully; how to insure quick, strong growth; how to feed chicks from start to finish; how to avoid white diarrhea and bowel trouble; how to brood chicks correctly; how to grow chicks and save feed; how to grow chicks for market; how to tell your best breeding birds; how to get fertile eggs; and contains other information that makes success sure.

"Dollars and Sense in the Poultry Business" may now be had absolutely Free. Everybody interested in poultry raising should have it. To obtain a copy of this free book, simply send a letter or postcard to Prof. T. E. Quisenberry, Dean of the American Poultry School, Desk 2066, Kansas City, Mo.—Advertisement.

AMERICAN POULTRY JOURNAL
523 Plymouth Court, Chicago, Ill.

BUT—heaven forbid—should you even think of sending your money to some other breeder, for "new blood"—curses 'on you—lookout, you are doomed to drown in the blackest depths of failure.

And so, we have "line breeding" set forth, stripped of all its frills and furbelows, according to the formula offered to the uninitiated, chicken-fever racked, beginner by a certain element of self-designated line-breeding specialists.

But, after a few years of experience, and with clearer vision, you may doubt the practicability of that formula. By that time you may have sufficient wisdom to reach the conclusion that real "breeders" are born and not made; that line breeding, in its strict sense of the word, offers the surest road to success for an experienced breeder who is truly deserving of the designation. But, you may reach the same conclusion that I have reached—namely, that purebred poultry which has been brought to a high standard of efficiency by the efforts of our truly constructive breeders is far better than non-descript poultry, whether such non-descript flock is a mongrel flock, or whether it is a flock which has had its weaknesses intensified by improper line breeding.

For, remember, the one and only function of line breeding is to intensify. And, just as it will intensify desirable characters when conducted under the guidance of a thoroughly competent breeder, so will it intensify, and more quickly so, the undesirable characters of low vitality and many retrograde factors when given the opportunity by an inexperienced breeder.

With full acknowledgement of the great advancement which has been made, and made only through the power of line breeding, by competent student-breeders, and without wishing to detract in any way from its true value, I am constrained to wonder whether attempts at line breeding, by the amateur are not the cause of many failures.

Too often have I found flocks which showed lowered vitality, under-size, coarseness creeping in, and other signs of deterioration, which the owner proudly pointed out as a "line bred" flock, produced by adhering to a "chart" which showed how to mate the different relations of succeeding generations of progeny. And, I haven't been able to convince myself that failure would result from the introduction of new blood in the form of a vigorous, properly bred male, simply because it did not happen to have originated in the same line.

I can't imagine a flock of White Leghorns in such a condition which would not be improved by topping them with a good male from Hillview Farm, Frank Rogers, Wilburtha, Schilling, or a number of other flocks; a flock of Rocks which would not be helped by a similar male from Thompson, Holterman, Myers, Bradley or Henderson; and so on down the list of breeds. The point for such an amateur breeder to strive for is to maintain vigor and efficiency—do it through new blood if necessary, and let that new blood be from the same fountain head if he will, but—the important thing is, DO IT with whatever material can be secured to best advantage.

Line Breeding! Yes, I have reached the conclusion that Line Breeding is the

Baby Chicks

Sturdier chicks than we distribute are not produced. Standardbred chicks, produced according to

natural laws, are chicks from which results may be expected.

greatest power for good in advancing any breed or variety, just so long as such Line Breeding is conducted by thoroughly competent breeders. But, Line Breeding, in the hands of careless, or inexperienced breeders, is one of the gravest dangers the poultry industry suffers from, and one which will bear much study.

But—I'll be frank, I du'no. Do you?

Wants a Two Variety Policy for All Breeds.

I have been very much interested in the article "More and more new varieties encouraged" by Dr. Geo. B. Edwards, in the January issue of the A. P. J. I consider this one of the fairest and most common-sense articles I have ever read on the subject of new varieties. He treats the subject from a purely unselfish standpoint. I have often wondered why some people object to others using the privileges accorded themselves. Every fair minded man or woman should be willing to allow others the same privileges they themselves wish to enjoy.

Dr. Edwards states that "every single comb breed should be matched with a rose comb variety." Why not? Just as truly as we have single comb fanciers we have those who would admire the rose comb of the same breed. Where is the fair-minded man or woman that would wish a patent on the comb and confine everybody to breeding the same variety in the same way?

When I was a boy, 60 years ago, I learned to fancy the rose comb speckled chickens my parents raised in Virginia. After I came to Iowa, about 40 years ago, I started to breed Barred Plymouth Rocks, but wished for a rose comb on them. In the spring of 1886 I found a Rose Comb Barred Rock sport and at once began to cross him on my single comb pullets with the idea of forming a Rose Comb Barred Rock variety for my own use and fancy. Not until the last eleven years did I make an effort to bring this up to a standard breed.

We now have about 140 members of the Rose Comb Barred Rock Club scattered over many states and foreign countries, besides many over America who are breeding them and are not members of the club. Should these people who truly fancy the rose comb on the Barred Rock be denied the standardization of their variety simply because others fancy the single comb?

One very prominent breeder of single combs, for whom I have a high degree of esteem, and one whom I have always appreciated, claims: "To saddle the rose comb upon the Plymouth Rock is robbing the breed of its birthright"; that "the occasional rose comb that we find cropping out in the Barred Rock is the throwing back through many generations to the Dominique used in the formation of the Plymouth Rock breed." He then adds that if he were "a young man he would enter the field in earnest and breed the rose comb, but would not call it Plymouth Rock." His objection seems to be mainly the two varieties of the same breed. Now, take the Rhode Island Reds, the Leghorns and a number of others having both single and rose combed varieties, could the rose comb Barred Rock breeders with the identical breed except in comb, call their variety anything else but the Rose Comb variety of that breed? With Standard description except in comb identical, it could not be called anything else. The same is true of the Rhode Island White. If type and characteristics are true to the breed, they should be admitted as Dr. Edwards says.

The object of the American Poultry Association is not to depress the poultry industry but to advance and protect its general interests.

Unless there is distinction in breeds and varieties, new ones should not be admitted, but with distinction and merit, we cannot have too many. There will be fanciers for every breed and variety and it is rivalry and competition in a way that brings about great industries.

Little Journey Among Anconas

Some night take this "Little Journey Among Anconas"—it will fascinate you!—and you will profit immeasurably from the experience.

Between the two substantial covers of this latest book by the Ancona specialist, H. Cecil Sheppard, is packed all the "meat" of Ancona history and experience since the early discovery of this prolific breed. Mr. Sheppard's amazing winnings for many consecutive years at Madison Square Garden, New York, entitle him to write the leading text book on Anconas.

"A Little Journey Among Anconas" is offered postpaid for \$1.00. It will show you how to get more profit and greater pleasure from your poultry.

"Have You Made Your Matings Yet."

If you haven't it's time you got busy. The whole success or failure of this year's crop of young stock will depend upon how wisely you choose the birds for mating and how well you fit the male in each pen to his mates. Study each bird carefully, both as an individual and in relation to the birds with which it is to be mated.

First of all: in selecting your breeders, choose those which are strong, vigorous individuals, full of pep and health. No matter what your purpose in breeding—whether it be for high egg-laying ability or for the production of birds which will win for you in fast company, you can't afford to overlook the question of health and vigor. Don't allow excellence in some one quality to blind you to serious defects in other respects, or tempt you to use a bird which is essentially weak, worthless, individual—a cull. The use of such a bird will be likely to give you poor fertility, poor hatches, and to introduce weaknesses in your flock, which will cause you trouble for years to come. Remember that you are breeding for improvement and that for the greatest success this must constitute an all-around advancement in your flocks, not the improvement of one quality alone at the expense of other qualities, which are just as necessary.

Having selected for vigor, health and pep, you must next select for quality. Consider carefully both type and color. In the pursuit of one, do not neglect the other. Familiarize yourself with what constitutes desirable type and color, and with the best way to put your birds together to produce these qualities. Learn the defects likely to occur in birds of the variety with which you are concerned, where these are most likely to be found, how heavily they should weigh in the selection of breeders and how the matings should be made in order to overcome them.—H. M. Lamon.

Wisconsin Farm Flocks.

Wisconsin's demonstration poultry farms under the direction of poultry specialists of the Wisconsin State College of Agriculture, are making history. Owners of 78 farms in 28 different counties recently completed egg records for this year. More than 40 new demonstration farms have been added to the list for next year.

The average production for the first ten winners was 140 eggs for the 365-day period with an average cost of production of 20 cents a dozen. The average production for the leaders of each breed was somewhat lower, but 133 eggs per hen from a flock of over 10 chickens is a production record not to be scoffed at. The leading flocks in each breed gave an average net income over feed of \$2.26 per hen for the year.

That the demonstration farms are among the biggest factors in bettering the poultry industry of the state is the belief of the college authorities. These farms are typical Wisconsin farms and chickens are not the only source of income. Usually poultry is but a side-line, dairying often being the main issue. The farms are selected by Mr. Hayes when he makes his culling demonstrations. The farmers are of a progressive type and willing to cooperate with the college of agriculture.

Nearly 8,000 chickens were aggregated on the 78 demonstration farms this year each flock averaging more than 100 birds. Of these many flocks, but one flock was of mixed breeding. More and more are these progressive farmers coming to realize the value of a pure bred flock of but a single breed. The records made by the mixed flock on the one demonstration farm served as convincing evidence that it pays to keep pure bred fowl. The mixed flock made an unusually fine showing in the month of April and threatened to lead in egg production. But the succeeding months witnessed the downfall of the "pretenders." Poultrymen at the College of Agriculture declare that there is nothing to the theory that a hen that lays well in April is sure to be a high producer. They maintain that April is the month in which the peak of the laying curve of every

24 Hens Average 183 Eggs in 12 Months

Bought Old Hens Sent to Market Gave Over 4300 Eggs in Year

"I am not an experienced poultryman, but will tell you my experience in using Giles Poultry-Tone. I bought a crate of 24 Leghorn hens from a South Water Street commission man. I commenced giving them Poultry Tone, according to directions, twice a day for 10 days. In the meantime they had commenced to lay. I continued to give them this mixture three or four times a week. For twelve consecutive months, 1 year, I kept an accurate account of the eggs received from these hens. They gave me 4,392 eggs. Experienced poultry men told me this was an exceptional yield of eggs, especially as the hens were old."

(Signed) J. J. Bonner, Chicago, Ill.

"Giles" POULTRY TONE

Send your order today for this wonderful, efficient, tonic-conditioner if you want a lot of high priced winter eggs. POULTRY TONE puts your fowls in highest state of health and vigor, and keeps them there.

Giles POULTRY TONE will greatly increase egg production because it increases the appetite, aids digestion, makes the bowels more active. It tones up the egg-making organs, develops the egg cells in the ovary so that you get more eggs, no matter how cold or wet the weather. Mr. Bonner's experience is proof of that.

PREVENTS AND CURES COLDS-ROUP-CHOLERA

POULTRY TONE overcomes and expels all germ poisons. It combats the germs that cause Roup and Cholera and it tones up the system so the chickens can resist disease. It affords prompt and permanent relief.

MONEY-BACK GUARANTEE

POULTRY TONE is a real poultry remedy and tonic. Always sold on money-back guarantee if not satisfied. On the market 20 years without a single request for refund. Try Poultry Tone on this plan. You can't afford to be without it. It's a sure money-maker for you. Price, 50 cents large bottle; quart can, equals ten 50 cents bottles, \$2.50, prepaid. Send for big circular Poultry Welfare, it's free. Send your order today.

GILES REMEDY COMPANY
1915 W. Van Buren St. Chicago, Ill.
LIVE AGENTS WANTED IN UNOCCUPIED TERRITORY.

Best Treatment for Germ Diseases

Guaranteed to Prevent and Cure Colds, Roup, Canker, Cholera, and White Diarrhea or Money Refunded.

Keep your flock healthy, free from disease. Prevent and cure germ diseases which rob you of your profit. Roupine is a scientific remedy for the treatment of colds, roup, canker, swelled head, sore eyes, gapes, dysentery, white diarrhea, and cholera. Roupine kills the germs that cause disease, soothes and heal the inflamed parts, restores them to normal condition, and saves the chickens.

Increase Egg Production

Roupine increases egg production because it keeps the fowls healthy and strong, for it is a wonderful intestinal antiseptic, tonic and stimulant, and increases resistance against disease. Roupine doesn't force, it just increases functions in a natural way so that hens will lay more eggs.

Read What Satisfied Users Say

Geo. M. Wells, A. P. A. judge, Oshkosh, Wis., says: "Roupine is a wonderful tonic for putting birds in condition. I find it great for canker, roup, and diarrhea in baby chicks." John Betz lost 25 chicks from White Diarrhea. He says, "Since I began using Roupine, I have lost no more." C. L. Pre-Fontaine, Fond Du Lac, Wis., says, "Roupine is one great remedy. I have never found its equal in my 12 years' experience."

Money Back Guarantee

Roupine is absolutely guaranteed to do all that is claimed for it. Should it ever fail, your money will be promptly refunded without a quibble. You must be absolutely satisfied. Price, 50c and \$1, postpaid. It will pay to answer this ad today, right now.

hen is reached, and that because a hen lays, lots of eggs in this month is no indication whatsoever of her laying ability the year around.

Many of the demonstration farms are increasing their egg production by the use of electric lights. The lights are generally turned on in the small hours of the morning by a patent alarm clock arrangement. Where electricity is not available, farmers are putting lighted lanterns in the chicken houses during a part of the evening.

Culling by Observation.

There is a kind of poultry culling that can be done with the eye, in watching the flock eat, if the poultry-keeper has trained himself—or more commonly herself—really to observe the fowls and their needs.

I seldom watch the feeding of a good-sized flock, such as is seen on the average farm, that I do not notice two undesirable classes of fowls; one composed of indolent, lazy fowls that are merely boarders, though not expensive ones, for they have meat value; and the other class is composed of those that are not boarders yet are a nuisance and sometimes a menace. These are the wild, shy fowls, and those that are "off their feed"—just slightly sick. The shy ones keep to the outskirts of the flock at feeding time, and never get enough food to make them profitable either for laying or for the market. The slightly sick fowl may at any time develop serious sickness, and endanger all the others.

An unobservant person may think that the reason why these chickens eat little or not at all, is simply because they are not hungry. I have been astonished to see how many experienced poultry-raisers will allow free range of the yards to hens with the unmistakable drooping, drowsy, tottering, ruffled-feathered, pale-combed appearance of disease. The sick chickens, and the shy ones, should be separated from the flock and given the care they need.

It is my experience that hens lay best when they leave some food uneaten. This may be called "unscientific," but I have found that it is well-nigh impossible to overfeed a hen, so far as her health is concerned. She may occasionally become too fat to lay, if of one of the heavier breeds, but there is more danger of too little feed than of too much. A hen fed on a balanced ration does not tend to fatten like one fed on corn alone, as too many still are. Hens may be fat and still underfed for health and laying, if they have not the properly variety of muscle, bone and shell-making foods.

Besides laying few eggs, the underfed hen lays small eggs. In some years' experience with both White and Brown Leghorns, my hens laid eggs that compared well with those from hens of the large breeds raised by my neighbors, who let their hens mostly scratch for a living.

My observation of health, contented active, laying chickens on the average farm, is to the effect that they are always hungry—like boys and dogs. If any do not eat, "there's a reason." Too often it is "root, hog and die," or root with the hogs or die, for the average farm fowl. Despite the now recognized value of the hen as a money-maker, there are still farms, and plenty of them, where the hens are not fed except for a little grain thrown them once or twice a day. There are still farms where they are not fed at all, but are expected to make their living picking up waste corn after hogs and cattle, and incidentally being killed and eaten by the hogs, or trampled to death now and then, or crippled so they must be killed.

The cardinal points in raising poultry are plenty of food—and drink, shelter and cleanliness. All are essential, but the greatest of these is food.

Mo. ELIZABETH WADDELL.

Correction.

In correction of an error which appeared in the January ad of the Morris Poultry Farm, H. Rawnely, Mgr., writes: "We did not win third cock at Chicago Coliseum, 1921. This prize was won by Mr. Otto. Nor did we win 1st cock at the Garden in 1920. This prize was won by Mr. Lyle. We would be very glad if you would correct this in your next issue in fairness to Mr. Otto and Lyle."

The World's Official 2-Year Record for Consistent High Egg Production

OVER 300 EGGS PER YEAR FOR TWO CONSECUTIVE YEARS

Lady Victory
304 EGGS

Keystone Maid
306 EGGS

Our 1,000-egg S. C. W. Leghorn Champion, Lady Victory, laid 304 eggs, defeating 750 entries of all breeds in American Egg Laying Contest. Laid 25-27-29 eggs in January, February and March, of coldest winter in 98 years. Laid 1,011 Eggs in past 4 years—the first recorded instance of an official champion laying over 1,000 eggs.

The following year, our S. C. W. Leghorn, Keystone Maid, laid 306 eggs, defeating 1,000 layers of all breeds, American Egg Laying Contest; laying 28 eggs—a 100% record—in February. Laid 29 1-3 eggs per month average for 9 consecutive months. Her pen of 5 pullets laid 1,301 eggs per year—an average of 260 eggs per bird.

CONSISTENT WINNERS ON ALL THREE BREEDS

S. C. W. LEGHORNS WHITE WYANDOTTES S. C. R. I. REDS

in Leading Official Contests Since Contests Began

In the last American Egg Laying Contest we had Highest Pens on both White Leghorns and White Wyandottes. Same year, Our Champion, Red Rose, defeated all Reds in North American International Contest, laying 254 eggs in year. Much too numerous to mention here would be a complete list of all our contest winners since 1913.

It should never be assumed that the Boston show is merely a big collection of birds. If only numbers count, the Boston show may be summed up by saying that it is annually the biggest winter show of the year. Nor is Boston only a quality show, for if that were all the glory of the Boston show could be said to rest on those classes which are the best of the year. The Boston show is something more than an aggregation of numbers and a display of quality. Something else contributes to the formidable and influential position it occupies. It is a show that has traditions of the past and ideals for the future. As one walks its aisles there is a fine atmosphere of fellowship. One leaves the famous old New England city enriched and ennobled by the warm fires of sentiment that burn bright in Boston show.

Homeward bound we were favored with the company of C. P. Scott of Illinois. The Century train, with the flight of an eagle, was running across New York State. Bed time came and we bid our traveling companion "good night." Then he said: "I think I will sit up an hour yet, and reflect on the week that is now past." Scott is no novice in poultry shows. But he had attended the Boston show, and dreams were about to cast their quiet shadows of precious memories. To be able to enjoy the past is to live twice. Such is the contribution of the Boston show, and those who make it, to the lives of poultrymen; and such is its contribution to the purebred industry. It adds a new dimension to our existence and gives us a baggage of dreams and memories for the ensuing year. The next Boston show will be held Jan. 1 to 5, 1923.

Awards as placed by the judges and descriptive matter on the birds follows:

Light Brahma—Willow Brook Farm, Beverly, Mass., 1-4 cock, 3 hen, 2 ckl., 2 pl., 1 old pen, 1 young pen. Willow Dale Poultry Farm, East Weymouth, Mass., 5 cock, 4 hen, Harvey C. Wood, Bound Brook, N. J., 2 cock, 2 hen, 1 ckl., 1-3 pl., 3-4 old pen, 3-4 young pen. Fairview Poultry Farm, South Portland, Maine, 3 cock, 1 hen, 3-4-5 ckl., 4-5 pl., 2 young pen. Geo. V. Fletcher, Belmont, Mass., 5 hen, 5 old pen, 5 young pen. F. C. Stockwell, Stonham, Mass., 2 old pen.

First cock, large, well-built, well finished in plumage, broad feather, beautiful markings in neck; a worthy representative of the best of the aristocrats. Second on same order; shy in breast; not as good comb or final condition of feather. Third, rounder shoulders; narrow neck; feather, some straw color; not as good substance of body. Fourth, grand big bird; little more back striping, with some black on breast at shoulders. Fifth, black on upper breast; some smut on lower hackle. First hen had won 2nd at Chicago Coliseum early in December. Second, good head, back, station; better neck and larger than winner. Third, beautifully laced in neck; white

BOYER'S HATCHERY

THE IRON COVERED INCUBATOR
FREIGHT PAID

Here is the biggest incubator bargain of the year. A 150 Egg Incubator (without brooder) covered with galvanized iron, a machine that won't warp, shrink, or open up at the seams, for only \$13.85, freight paid anywhere east of the Rockies. Don't class this big galvanized iron covered, dependable hatcher with cheaply constructed machines. Don't buy any Incubator until you know what it is made of. Note these Ironclad specifications: Made of genuine California REDWOOD, insulating board, asbestos, and covered completely with galvanized iron, giving you the strongest and most durable Incubator that can be made.

**30 Days Trial MONEY BACK
IF NOT SATISFIED**

You have nothing to risk. We will send you machines—let you use them 30 days. Compare them in quality of material, hatching qualities and price—and if you don't find them satisfactory, send them back—we'll pay the freight charges and return your money. You are absolutely safe. Incubator has automatic regulator—deep chick nursery. Hot Water Heat with Copper Tanks and Boilers in both Incubator and Brooder. All machines shipped complete with all fixtures—all set up ready to use when you receive them. Book of directions sent with every machine. Send for FREE CATALOG or order direct from this advertisement.

PURITAS SPRINGS S.C. WHITE LEGHORNS

Trapped for Over Ten Years Without Missing One Day. Every Nest on Our Farm is a Trapnest **THAT'S HOW WE PRODUCED THE WORLD'S GREATEST LAYERS** Read This Letter and Send for Our 1922 Catalogue Clearfield, Pa., Dec. 20, 1921. S. J. Schenk. Dear Sir: I want to tell you that your birds will lay eggs when other birds won't. Because last winter proved it. I sold all my other Leghorns but yours and they are wonders. The 33 pullets that I hatched from your eggs laid as follows in their pullet year: 303 eggs, 300 eggs, 298 eggs, 295 eggs, 288 eggs, and the lowest record bird laid 251 eggs. They are pets and regular egg machines. Yours very truly, C. M. Woodel.

We Have Hundreds of Letters Similar to the Above.

Speak to anyone who has Puritas Springs Leghorns and they will tell you that they can't be equaled for laying. Puritas Springs Leghorns are record layers and have beauty combined and many of our customers have taken prizes in the show room. If you get our stock, eggs or chicks you will have a strain of birds that you can be proud of. Send for our big Free instructive catalog, it describes our stock, gives prices for stock, eggs and chicks, photos of our Leghorns and farm. Many letters from satisfied customers tells how to feed chicks, laying stock and much other information. Send for catalog.

HIAWATHA CHICKS—EGGS

WINTER LAYING S. C. WHITE LEGHORNS
Eventually you will decide that the WINTER LAYER is the BREAD WINNER. For EGGS—EGGS and EGGS the year around is what makes poultry pay and pay well, therefore do not delay and start right now and order your HIAWATHA CHICKS and EGGS for the 1922 season. At prices that you can afford to buy. Write today for illustrated price list and circular. Address HIAWATHA POULTRY FARM, Box 94, Crystal Lake, Ill.

shafting in tail coverts; shy in breast; some straw color on top. Fourth, clean colored hen; harder feather than 3d. Fifth, good hen. Some cockerels not as well finished as other years. If a man wants Light Brahmas to grow soft roasters, where can he go to get better stock than to the standard exhibition class at Boston? These birds are not the squat, Cochized Brahmas of some years ago. They combine usefulness with standard qualities. The males have wattles and are active. First cockerel, beautiful bird, good type. Second, larger because of age; another excellent bird. Third, rangy bird; long in head and tail. Fourth and fifth, well balanced cockerels, nice size; neither as flat across shoulders as we like, and trifle weak in hackle under throat. First pullet, magnificent Brahma; big, good type and color. Second, round shoulders, making her narrower in body; splendid white body and good markings in neck and tail. Third, similar to first, but evidently plucked a little in back. Fourth, another very strong pullet. Fifth, again good; standard wings of course; younger.

Dark Brahma—Willow Brook Farm, 1-3-4-5 cock, 1-2-3-4 ckl., 1-2-3-4 pl. Oak Hill Poultry Farm, Montello, Mass., 2 cock, 3 hen. E. E. Whitney, Higham, Mass., 1-2 hen, 5 pl. Riverdale Poultry Farm, Riverdale, N. J., 4 hen, 5 ckl.

The greatest class of modern years. Didn't know that such a cock as 1st lived; good type; broad shoulders; sound black parts, including tail, and marvelous back and saddle striping. Second cock, on same order, fails to winner in gray fluff. Third, fourth and fifth, fair cocks. First hen, marvelously pencilled, good size; such quality a new revelation of the latent possibilities that have lain sleeping in this grand old breed. Second, larger, more buff in ground color. Cockerels, young, some white tipping in breasts; promising class that needs more age. Good Brahma type clear through pullet class; markings show strong penciling, but hardly expect any pencilled pullet to carry such markings as first hen.

Buff Brahma—H. C. Merrill, Malden, Mass., 3-4 hen, 2 ckl., 1-4 pl. F. J. Hochrein, Greenfield, Mass., 1-2 hen, 1-3-5 ckl., 2-3 pl. Myown Poultry Farm, 4 ckl.

First hen a true Brahma, excellent neck and tail lacing; nice clean buff body. Second, another big hen of good type, attractively marked. Several small cockerels, first having most size, red on wing bone; trace of white in tail. First pullet, another attractive female; nice buff back and breast with strong tail coverts and nice neck lacing. Second, younger; strong neck lacing; standard Brahma wing.

Buff Cochins—Willow Brook Farm, 1-2 cock, 1-2 hen, 2-3 ckl., 3-4 pl., 1 old pen, 1 young pen. Harvey C. Wood, 1-4 ckl., 1-2 pl.

First and second cocks, strong team of full feathered birds. Hens not molted out evenly. First cockerel, big as cock; level color. Second and third, younger; splendid feathering; level, soft buff. Strong class of pullets; good feathering, type and color. First, not as low set with tipping forward carriage as we like.

Partridge Cochins—Mrs. Harvey C. Wood, 1-2 hen, 1-2 ckl., 1-2 pl.

The wonderful Mitchell line is missed. Adolph Anderson not well; his house burned down; unable to attend. Wood has more size than he has merited shown. First hen, good type and markings; nice ground color. First cockerel big; dark ground color; pale lobes. Second, brighter ground color; younger. First pullet, big, nice color. Second smaller, and penciling striping into ground color of cushion.

Black Cochins—A. W. Lewis, 1-2 cock, 1-2-3-4 hen, 1-2 ckl., 1-2-3-4 pl., 1 pen. Herbert K. Foss, East Kingston, N. H., 5 hen, 3 ckl.

Such quality has not been seen before since the twentieth century began. First cock every thing a Cochins should be. Magnificent line of hens; cockerels remarkably well grown team; first having a broad feather full of sheen; two side sprigs on blade of comb. Pullets, again superior quality right through.

White Cochins—Herbert K. Foss, 1-2 cock, 1-2-3-4 hen, Harvey C. Wood, 1-2 ckl., 1-2 pl.

Cocks, fair quality. First and second hens big and good. Third, another full feathered Cochins, but poor webbing of feather. First cockerel big, well built, full feathered. A broader, rounder, better set White Cochins cockerel rarely seen. A trio of magnificent White Cochins on display just imported from England for this show.

Black Langshans—Donna M. Howe, Agawam, Mass., 1 cock, Willow Brook Farm, Beverly, Mass., 4 cock, 2-5 hen, 1 young pen. E. S. Corbit, Dover, N. H., 3 cock, 3-5 pl. Myown Poultry Farm, Ellenville, N. Y., 5 cock, Thos. Fowler, New London, Conn., 2 cock, 3 hen, 4 ckl. L. C. Phillips, New London, Conn., 4 hen, 5 ckl. 2 pl. J. F. Robinson, South Weymouth, Mass., 1 hen, 1-2 ckl. Frank E. Backus, Pittsfield, Mass., 3 ckl., 1-4 pl. J. E. Bronson, East Dedham, Mass., 1 old pen.

First cock, splendid bird; straight leg at hock would give him better carriage. Second, another good cock. Third, badly split open in tail. Fourth and fifth very ordinary. First hen, beautiful Langshan; good size, type and balance. Second needs more station. Third evidently laying, making her heavy in abdomen. Fourth, good hen. Fifth, ordinary. First cockerel, well finished; true Langshan profile; more squareness across shoulders would give him more breadth and substance of body. Second, another good one, close runner-up. Other cockerels have legs set too far back to raise up posterior section and give the finest Langshan type. A fine lot big, type, well grown pullets. Winners well placed, with little to choose between first second and third, each having type, size and deep sheen of green color.

White Langshans—Thos. W. Crowe, New Britain, Conn., 1 cock, 1-2-3 hen, 1-2-3 ckl., 1-2-3 pl. Myown Poultry Farm, 4 ckl., 4 pl.

More representative exhibits of this kind will lead to more interest, larger field for selection and substantial advancement that will make the White Langshan comparable with the Black.

Barred Plymouth Rocks—M. S. Arey, Bar Harbor, Me., 4 cock, G. L. Rosen, Lunenburg, Mass., 5 cock, 1 pl., 2 young pen. Frank Ferall, Winsted, Conn., 1-2 cock, 2-4 pl., 1 young pen. C. Arthur Tower, Franklin, Mass., 3 cock, Wilton P. Hudson, Brookside Farm, Great Barrington, Mass., 1-4-5 hen, 4 ckl., 5 pl., 1 old pen, 3 young pen. Basil Aldrich & Co., Milford, Mass., 3 hen, 5 ckl., 3 pl. Fred E. Sherman, Hyannis, Mass., 2-3 ckl. C. W. Browne, Parkhill, Ont., Can.

1 ckl. Hillcrest Breeding Station, Melrose, Mass., 4 young pen.

First cock, narrow barred; split open tail. Second, smaller; metallic on back and wing bow. Third, narrow bars; unfinished, split tail. First hen good Rock type, straight clear barring. Second wider bar on wing bow than on back; dark bar wider than light bar on back is common in all winning females. Third nicely barred bird; not a big hen. Large assortment of cockerels. First big clear colored; tail in but more finish would help; nice head. Second, a nicely finished bird; good head; little round across shoulders; narrow barred; darker with more metallic than first. Third, high in shoulders making breast shy; nice comb, strong head like others; tail in pretty good condition. Fourth, strong head, but somewhat rangier bird than New Englanders are going for; considerable metallic on back and wing; fine covering of tail coverts, but main tail feathers partly gone. Fifth, we understand bird in this coop was changed. One begins to see a consistent effort on part of judge to pick cockerels with strong heads, good bone, closed up tails that are finished over.

First pullet, trim body; ridges up and down dark colored shanks. Why can't Barred Rock judges be even more courageous? Take first hen, her tail feathers narrow down into chick feather form at tip ends. Here is first pullet with slight ridges on shanks. These things would be of moment in other varieties. Is it not important to breed a chicken first, so it will not get tired holding up its many bars? We say this not to criticize as much as to encourage men who are working in direction of better finish in all breeds, including this one. New England breeds a well bodied, compact Rock. It is not thin legged or sharp breasted. However, some breeders have got color at a tremendous sacrifice of substantial qualities. The judge leans strongly to the bird that catches his eye. For instance, second pullet had badly formed wings.

Barred Plymouth Rock Pullet—K. Berthold, Saugus, Mass., 2 cock, 5 ckl., young pen. Geo. A. Bowker, Worcester, Mass., 3 ckl., 4 young pen. Farms, 1-4 cock. Frank Perall, 3 cock, 1 ckl. Fred E. Sherman, 3 ckl. C. H. Shaylor, Lee, Mass., 2 ckl. C. A. Butler, Whitman, Mass., 2 young pen.

First cock, split tail. Second, nicely closed tail; well finished plumage; well formed wing; tendency to sprig on blade of comb. Third, split tail. First cockerel, beautifully colored bird for show purposes. This is rightfully a breeding class, but when you put breeding birds in a show room one can only judge them by exhibition standards. Be that as it may, first cockerel was narrow barred, attractive color; little loose in one wing, flights not being tucked up as they should be. Second, younger, darker in color; legs bow out at knee.

Barred Plymouth Rock Cockerel—Fred E. Sherman, 3 hen, 1 young pen. Brookside Farms, 1-2 pl. C. Arthur Tower, Franklin, Mass., 2-5 hen, 1 old pen. E. F. Wood Franklin Mass., 1 hen. K. Berthold, 4 pl., 2 young pen. Patrick F. Rasco, North Adams, Mass., 5 pl. C. H. Shaylor, 3 pl. Lambert's Poultry Farm, 1 Apponaug, R. I., 2 old pen. Harry R. Lewis, Davisville, R. I., 3 young pen.

First hen unusually dark, heavy colored matron; good size and proportions. First pullet, big, long, dark colored pullet; tail nearly gone. Second, another breeding pullet that looks like a straight cockerel bred bird. Third, cleaner shanks than other two and lighter undercolor.

White Plymouth Rocks—Mirmichi Poultry Farm, Foxboro, Mass., 1 cock, 1 hen, 1 old pen, 2 young pen. Sabrina Farm, Wellesley, Mass., 3 cock, 2-3-4 hen, 1-3 ckl., 1-2-4 pl., 2 old pen, 1-3 young pen. Samuels Knowles, North Easton, Mass., 2 cock, 4-5 ckl. B. J. Whitman, Weymouth, Mass., 5 cock. John W. Beebe, Worcester, Mass., 4 cock. E. K. Judd, Montrose, Mass., 5 hen, 2 ckl., 4 young pen. F. A. Brown, Brockton, Mass., 5 pl. Henry E. Forkey, Worcester, Mass., 3 pl., 5 young pen. Sorosis Farm, Marblehead, Mass., 3 old pen.

Large, strong class. First four winning cocks have Rock type, yellow legs and are well finished. Narrow bodied cocks, those that are short in back, high in breast or not standing on strong legs have no chance in this competition. Fifth cock not as well finished in tail. First hen, large, long back, nice head and tail; legs well set apart, this hen having substance of body as well as length. Second, another superior hen, shown in beautiful condition. Third, favors closely in quality. Fourth, again on same order. Fifth, a long hen presenting nice profile view. Short hens, or those with cushions, or heavy in fluff cannot stand such competition.

First cockerel, one of the outstanding birds of the show; a beautiful Rock, well balanced, well finished and put down in the pink of condition. Second, another great cockerel but not quite the smooth texture of feather as in winner. Third, a big, strong male; will make a great cock. Fourth, well built, not quite as well finished in tail. Cockerels that are small, narrow between legs, weak in head, creamy, short in back, narrow across saddle, or have a V-shaped underline, can not win in such a class. Any one of these things would set them out. Fifth pullets. First and second, a beautiful lot of cockerel, badly formed wings. A beautiful lot of pullets. First and second, a smooth feathered, pure white team; excellent size with breadth all the way from the shoulders back; yellow shanks. Right through the five placed pullets there is little left to be desired.

Buff Plymouth Rocks—Chester W. Gould, Greenwood, Mass., 2 cock, J. A. Ashline & E. J. Croft, Fitchburg, Mass., 5 cock, 1-4 ckl., 3 pl., 2 young pen. L. D. Ackerman, Greenfield, Mass., 1 cock, 4 hen, 1 pl. Oliver Bros., Barre, Vt., 3 cock, 2-5 hen, 2 ckl., 1 young pen. L. E. Curtis & Sons, Freeport, Me., 4 cock, 1 hen, 5 ckl. Eben F. Gay, Norwood, Mass., 3 hen, 3 ckl., 4-5 pl. Wm. Spooner, North Easton, Mass., 2 pl. Kingman Farm, Randolph, Mass., 1 old pen.

Cocks lack condition. First has crooked middle toe, and old scales and dirt on shanks; nice profile but lacks breadth across saddle; nice sheet of buff color, with tail matching and free from bronze. Second, points of comb frozen off; lacks breast. First, second, third hens, good size and type. First, not as hard webbing of feather or good head as we like. First cockerel, a superior specimen; beautiful sheet of lustrous buff; nice type. Several pinched tails in cock class. First pullet, again a superior bird. Second and third, not as hard webbing in feather as we like. Some nice quality in the pullet class.

Wilson's White Leghorns Makes World's Record At The Chicago National Show, January, 1922

WINNING FIRST COCKEREL FOUR CONSECUTIVE YEARS

In a very large class, competing against many of America's largest breeders.

1st Cock; 1st, 2nd, 5th Cockerels; 1st, 2nd, 4th, 5th Hens;
1st, 2nd, 3rd, 4th, 5th Pullets; 1st Old Pen; 1st Young Pen.

Also Best Display and All Specials.

This great win proves that Wilson's Leghorn's are the leading Leghorn's of America today. Am now booking orders for

Baby Chicks and Eggs

As I have only a limited number for sale from my world's winners, order at once.

Mr. Glenn A. Wilson, Box 10, Sandwich, Ill.

Dear Sir: The cockerel I purchased from you arrived a few days ago, and I have put off writing to you until I had given the bird a chance to straighten himself out. The cockerel exceeded my expectations, he is far better than anything shown at the last State Show, which was held here in January. Very truly yours, H. M. Davenport, American Railway Express Agent, Monmouth, Ills., Feb. 14, 1921.

Mr. Glenn A. Wilson, Box 10, Sandwich, Ill.

Dear Sir: I got 500 day-old chicks from you in 1919, July 11. They were on the road three days, with the temperature 90 to 100 F., from your ranch to Spokane, Washington, and only two dead, and at three months of age I had 450. They were the finest bunch of chickens I ever saw. The pullets were laying 540 eggs a week in March, that is only 100 of them. I had to move and that was all I was able to keep where I was. And they were kept in a tent with only a small run to top it all. Please give me your prices on yearling hens and their egg records, also average weight per hen. Also state price of cockerels and eggs. Yours cordially yours, Mr. Thomas C. Richards, Gen. Del., Salem, Oregon.

P. S. Am starting again and expect to raise over 500 pullets this coming year.

Mr. Glenn A. Wilson, Box 10, Sandwich, Ill.

Dear Sir: I received the 18 S. C. White Leghorn hens which you sent me some time ago and am well pleased with them. Have been getting eggs from them while they are in the molt. Well, I suppose you will be glad to hear from my baby chicks that I bought of you the first of March. The pullets commenced laying at 4 months old and I set the pullets' eggs and hatched baby chicks in August. That's something not many can say; they can have baby chicks hatched from the spring chicks all in one spring and summer. Lots of folks that come to see the August baby chicks say, "I never heard of such a thing before." All want to know where those spring pullets came from, they think they are an extra fine chicken. They are a beautiful chicken, some of the pullets' combs are as large as a year-old hen's and they are such a pure white. I appreciate your honesty in dealing with you, as you have always sent me choice looking chickens. Everything I have purchased from you has been satisfactory. Very truly yours, Mrs. P. M. Powelson, Washington, Iowa. Sept. 23, 1921.

Can supply chicks and eggs from my trap-nested stock, with records from 180 to 290 eggs. Remember that every nest on my farm is a trap-nest. 100% live delivery guaranteed on all chicks. Write for my 20-page catalog and remember you will get a square deal from

Glenn A. Wilson Box 10 Sandwich, Ill.

Poultry Books at a Cut Price

A complete list of poultry books that everybody interested in poultry should have. This list is made up to supply the wants of all poultrymen, and covers about every phase of the industry; in fact, it makes a complete poultry library, and by taking them all at a cut price, you will be well equipped to make a success of this business. The books tell you how to line-breed, feed for egg production, reduce your feed bill, mate to produce exhibition birds, prevent and cure diseases, mix a balanced ration, build poultry houses, poultry appliances, etc. Following illustrations show books.

Save 33 1/3%
by ordering six or more now.

84 pages. Contains diagrams of all houses of all descriptions. Price 75c.

128 pages about increasing the egg production 90 per cent with the aid of artificial light—not theory but proven facts. Cloth Bound \$1.00.

11 Books \$5
A Complete Poultry Library.

128 pages. A down-to-date manual on breeding poultry. Price 15c.

Plans for houses and equipment. Everything necessary in building line. Price 50c.

128 pages, 20 illustrations. Tells how to save three-fourths your feed bill. Price 50c.

252 pages, 12 illustrations. Buy your own poultry doctor. An invaluable reference book. Price \$1.00

A text book for the beginner. Contains charts on line breeding. Price 50c.

Eleven Books for \$5.00

84 pages. Written from actual experience by Mr. Sheppard. Price \$1.00.

64 pages. Tells how to mate for best results. Price \$1.00.

124 pages. No matter what question arises, this book gives you the answer. Price 75c.

Cut Price for the Eleven, \$5.00; about 45c each.

This is a saving to you of one-third the regular price. If you have one or more of the above books, you can get the balance at one-third off the regular prices by ordering six or more at one time. No order for less than six accepted at reduced price. Take advantage of this liberal offer today. If not satisfied with your bargain, return the books and we will return your money.

AMERICAN POULTRY JOURNAL, 523 Plymouth Court, CHICAGO

Partridge Plymouth Rocks—Herbert W. Seymour, West Upton, Mass., 4 cock, 3 chl. Geo. H. Hendry, Mattapan, Mass., 3 cock, 3 hen. Fred A. Russell, Keene, N. H., 1 cock, 1 hen, 2 pl., 1 young pen. G. J. Faber, Seymour, Conn., 2 cock, 1 old pen. 1-2 chl., pl. W. Heath, Stonington, Conn., 2 hen, 4 chl. Harrison T. Sheldon, New Haven, Conn., 3-4-5 pl.

A pleasing advance in quality over former years. First and second cocks, a well built pair with nice ground color and good striking. Second shows some white in tail coverts. First second, third hens, good substance; rich ground color, nicely penciled. First cockerel, splendid saddle. Second, a lighter shade of red color. Third and fourth, smaller. First pullet stands out among the 1921 females. As good type and nice color as one sees. Second, as good one. Third, lighter ground color.

Silver Penciled Plymouth Rocks—Awards not listed in catalogue. The exhibitors were Oak Hill Poultry Farm, Chas. H. Swan, Myown Poultry Farm. A strong class. First cock, silvery white top with sound striping and sound black parts; an unusually fine male. First hen, remarkable for penciling from throat to tail; needs a little more length in back. Second, not quite as sound black in the pencils. First cockerel, another wonderful male; black breast and fluff; free from straw color on top; clear striping in hackle and saddle; good head. First pullet, strong head, good type, exceedingly good penciling for a pullet, all the way down throat through breast and clear out into fluff. The breeders deserve congratulations on such quality as the blue ribbon winners here described.

Columbian Plymouth Rocks—Wm. M. Allen, New Bedford, Mass., 1 cock, 1 hen, 2 chl., 1 pl. C. E. Twombly, Medford, Mass., 1-3 chl., 2-3 pl.

Small entry. Good size and type in cock and hen. First cockerel stands narrow at his knees. Pullets attractive.

Silver Wyandotte—Overlook Farm, Fitchburg, Mass., 2 cock, 5 hen, 2-4-5 chl., 3 pl., 1 old pen, 2 young pen. R. G. Williams, Barre, Mass., 5 cock, hen, 1-3 chl., 2 pl., 3 young pen. John F. Glynn, Everett, Mass., 3 cock. F. H. Davey, Yonkers, N. Y., 1-4 cock, 2-4 hen, 4-5 pl., 2 old pen, 1 young pen. Ira C. Keller, Prospect, O., 3 hen. E. A. Fletcher, East Foxboro, Mass., 1 pl.

Large and strong class throughout. Few breeders offer such great opportunity for breeders to display their skill. Being a complex bird, one cannot take snap judgment on the class. Judge worked for two days. His first hen and pullet do not have as large back feathers as second hen and fourth pullet. The west will agree with this decision, although it should be realized that prominent eastern breeders are producing a large feather in order to get a large open center. First cock combines both type and color to a remarkable degree. First cockerel, big, good head, clear top ground color; good breast lacing and wing; splendid head. It is plain that a determined effort is being made to clean up straw color in males, and first cock and cockerel are splendid models of advance made in the variety. Third cock, good wing bar; shows rust on top. Throat lacing on first pullet fails to go around. A better collection of Silvers has not been seen anywhere.

Golden Wyandottes—O. P. Chase, Andover, Mass., 1 cock, 5 hen, 3 chl., 1-3 pl. Geo. M. May, Andover, Mass., 4 cock. Geo. Newhouse, North Wilmington, Mass., 3 cock, 4 hen, 2-2-4 chl., 2-4-5 pl., 1 young pen. Ira C. Keller, 2 cock, 1 hen, 1-2 chl. F. Uphoff, Schenectady, N. Y., 5 cock, 2-3 hen, 5 chl., 2 young pen.

First cock, good head, nicely covered tail, well spread legs, round breast, a well laced breast and fluff; sound open striping in saddle. Second, still richer ground color; another good head; heavier striping at base of hackle. First hen, rather smooth in comb; good type and size; rich ground color. Shade of ground color is changing; heads are better; tails typically Wyandotte. This was not the case a few years ago. Big class and much interest in this modern type of beautiful Gold Wyandotte. Some light hackles in cockerels, but they are discounted by both judge and breeders. Several very shapely cockerels. Bad combs, long legs or poor tails are passing. A strong class of pullets, uniform in rich ground color, with clean center and uniformly sound lacing on breast.

White Wyandottes—Mimichi Poultry Farm, Foxboro, Mass., 2-3 cock, 4-5 hen, 2 chl., 2 pl., 2 young pen. Stanley Gallagher, Shirley, Mass., 4 cock. J. W. Andrews, Dighton, Mass., 1 cock, 2-3 hen, 1-5 chl., 1-3-4 pl., 1 old pen, 1 young pen. Ralph W. Piper, South Acton, Mass., 5 cock. O. L. Golder, Wakefield, Mass., 1 hen. S. B. Campbell, Lebanon, N. H., 3 chl. E. B. Sparrell, Sea View, Mass., 4 chl. Gravesdale Farm, East Brookfield, Mass., 5 pl. White Wyandotte Poultry Yards, Westboro, Mass., 2 old pen. Geo. H. Pollard, Greenbush, Mass., 3 young pen.

Always a strong class at Boston. First cock could win anywhere; elegant head, square shoulders, nicely arched back to well covered tail; no excessive fluff or coarseness, yet plenty of size. Second cock, of same general type; slightly softer feather; tail in not quite as good condition. Third, another well modeled cock. Fourth, shorter back, and being rounder shouldered, lacks breadth across saddle. Fifth, tail not finished. First hen, big, nice feather, good type. Second similar, but not quite as large. Third, another smooth female, well built. Fourth and fifth, softer feathered. Splendid heads and rich yellow shanks from first to fifth.

Both first and second cockerels are inclined to be chunky and low set. Some difference of opinion among breeders here, several favoring sixth cockerel, Andrews's, as bird that will come nearest to duplicating the magnificent first cock. Good quality right through pullet class. First has cleaner lines than winner last year. Second evidently been laying and pinches in wings trifle at cushion. Third, not as smooth webbing of feather over cushion as we like. Fourth, good head, smooth feather, good tail, smooth side over wings and cushion, clean under-line, not as big as first, and no evidence of any hind size in both first hen and first pullet. Fifth, lower set. Sixth, Pollard, well formed, smooth feather, good head, wide apart on legs, wide feather in tail; better specimen than Pollard's first pullet of two years ago.

Black Wyandottes—O. P. Chase, 1 cock. Geo. Newhouse, 2 cock, 3-5 hen, 1-2-3 chl., 3-4 pl., 1 young pen. C. H. Nesbitt, Riverhead, N. Y.,

3 cock, 2-4 hen, 5 ckl., 1-2 pl. Chas F. French, Canton, Mass., 1 hen, 4 ckl., 5 pl.

An attractive lot of hens. Yellow shanks on fifth and sixth prize cockerel. Of course, judge cannot put prizes on shanks alone, but this indicates that dark legs are not incompatible with good quality. First and second pullets, good Wyandotte type, splendid legs, yellow down sides of shanks, and lustrous, rich green-black plumage. Big advancement over plain plumaged black fowls occasionally seen in this variety.

Buff Wyandottes—W. S. Crandall, Elsmere, N. Y., 3-4 cock, 1-5 hen, 4 ckl., 2-4 pl., 1 old pen, 1 young pen. J. J. Dansro, North Clarendon, Vt., 2 cock, 3 hen, 2 old pen, 2 young pen. Dr. Oliver N. Eastman, Burlington, Vt., 1 cock, 2 hen, 5 ckl. Fred Rockwood, South Brookline, N. Y., 5 cock, G. H. Colburn, Manchester, N. H., 4 hen. G. Arthur Cook, Easthampton, Mass., 1-2-3 ckl. Percy B. Hall, Dudley, Mass., 1 pl. John S. Dunn, Gardner, Mass., 3 pl. Sylvia Farm, Schenectady, N. Y., 5 pl. Robt. H. Mahar, Milford, N. H., 3 young pen. F. E. Bronson, Newport, N. H., 4 young pen.

Large, strong class. Five placed cocks have good type and level color. First hen, smooth feathered female of good type, with clear wings and tail. Second, pinched in tail. Third, not broad across cushion with light tail; shanks in poor condition. A long line of cockerels, with sentiment among breeders that more size would improve some of the unplaced birds. First, second and third cockerels of standard size and type. A number of well formed, nicely covered tails in class, and birds without good heads, balks, rear ends and wet set on legs cannot be expected to win in such a line up. Moreover, the same shade of color needs to run out to the tail. In pullets, clear wings and tails are so common in this class that a bird has to have much more, such as satisfactory body conformation, a neat head and reasonably uniform surface color.

Partridge Wyandottes—Axel H. Malmsten, Mattapan, Mass., 3 cock, 3-4 pl. B. H. Young, Bar Harbor, Me., 1 cock, 1 hen, 2-4 ckl., 5 pl. F. W. Guild, Holliston, Mass., 2-4 cock, 2 hen, 1-8 ckl., 1-2 pl.

Not a large class but a creditable one. First cockerel best in several years at Boston; big, bushy tail. First hen small. Tendency is toward same shade of ground color in males as wins in west. Females still a shade lighter, first pullet coming closer to the good type, mahogany color and clear penciling preferred in west.

Silver Penciled Wyandottes—Oak Hill Poultry Farms, Montello, Mass., 1 cock, 2 hen, 3 ckl., 5 pl. A. L. Hathaway, Abington, Mass., 2-3 cock, 4 hen, 1-2 ckl., 1-2-3-4 pl.

Falling off in numbers. First cock has the type, well covered tail, sound black breast and feet, and clean cut lustrous top striping that makes a great specimen; a little rust on wing bows. Second, close runner-up, falling to winner in having white in wing bar. Third, not sound in black parts. First hen, sound penciling. Second, equally good type and well penciled, but pencils do not appear as heavy. First cockerel, a nice choice. Second smaller, dark on wing bow. Third, large in comb. Fourth, lacks striping in lower saddle. A strong lot of pullets, with nice type and good penciling throughout.

Columbian Wyandottes—J. A. Brackett, Mattapan, Mass., 2 cock, 1-3 ckl., 1-2 pl. Jas. E. Perkins, West Stoughton, Mass., 1 cock, 5 hen, 4 ckl., 3-5 pl. Ralph Woodward, Grafton, Mass., 4 cock, 3 hen. Gilbert Poultry Farm, Haverhill, Mass., 3 cock, 2 hen, 5 ckl., 1 young pen. Geo. Lyman Hall, Dudley, Mass., 5 cock, 1 hen, 2 young pen. Carl W. Wight, Framingham, Mass., 4 hen, 4 pl. Thos. C. Burke, Dorchester, Mass., 2 ckl.

Boston is usually to be depended upon as having the best show of this variety of the year. First cock, a beautiful bird in all except black in upper breast and throat; beautiful finished saddle, neatly striped. Second, another well built cock with good head and nice color. Good type, nice heads, white surface of body plumage, and two rows of tail coverts on practically every hen in the long line. First has a broad hackle feather and sound tail coverts, which shows off her lacing to fine advantage. Second, a long neck. First and second cockerels not large, but nice heads, round lines and good black markings. First pullet, similar to first hen. Second, lower set. A big line up of pullets with good heads, clear backs, nice neck and tail lacing right through.

Dominiques—Shown by W. B. Atherton, 165 Tremont street, Boston. As secretary of the show, he allows no prizes to go upon his own birds. Let it be said, however, that these Dominiques are the real article—not the product of fresh Barred Rock crosses.

S. C. Rhode Island Reds—Harold Tompkins, Concorn, Mass., 1-3-4-5 cock, 1-2-3 ckl., 1 pl., 1-2 old pen, 1-3-4 young pen. Prospect Farm, Newark, N. J., 2 cock, 5 old pen, 2 young pen. Mirimichi Poultry Farm, 2 hen, 5 young pen. Elmer F. Benson, Whitman, Mass., 1-3-4 hen, 5 ckl., 3 pl., 4 young pen. Sunnyfields Farm, Wallingford, Conn., 4 hen. Owen Farms, Vineyard Haven, Mass., 5 hen, 2 pl., 3 old pen. H. M. Tucker, Augusta, Me., 4 ckl. A. J. Densmore, Lebanon, N. H., 4 pl. Jas. W. McDonald, Cheshire, Mass., 5 pl.

Largest and best class ever shown. Astonishing advancement in breed. New Englanders complain about poor carcasses, long thin legs, high crested bone, poorly fleshed breast, yet breed is increasing more rapidly on New England farms than any other. Breeders charge and counter charge; there's strife in their Red club meeting, yet entry increases each year, quality advances, more birds change hands and higher prices are paid. It is the day of the Rhode Island Red. There is room for a big barred basket at one end and capacity for the production of eggs at the other end. The standard sets the weight of a R. I. Red pullet at 5 lbs., yet the stock is the equal of any of the American breeds in size. Good judging is helping. Slightest tendency of a loose wing puts bird out. Nothing bad or likely to be bad is tolerated. A cockerel with round shoulders and narrow back, with which lack of breast is associated, goes down to a minor prize of eleventh. A cock with stringy feather goes down to tenth. Competition is keen. Small things count. Remarkable how free eastern males are from black in neck when hackles cut in and red in face, eye color, and how sound the red is in backs at base of tails.

First and second cock, about the same size; strong bodies; probably carry 9 lbs. Third cock larger.

Harry Lewis says

"EVERY POULTRYMAN SHOULD USE Semi-Solid Buttermilk"

Makes More Winter Eggs

You are certain to get healthier, stronger chicks from eggs laid by hens fed Semi Solid Buttermilk. Many poultry men have cut their hatch-

ing losses in half and given the chicks the best possible start in life by adding this strength producing supplement to the grain ration of the flock. When you feed Semi Solid Buttermilk you increase the percentage of successfully hatched eggs and cut down the losses from weak, unthrifty chicks.

GET MORE EGGS

Not only do your hens lay stronger hatching eggs, but Semi Solid makes them lay more eggs and at a time when most flocks aren't laying—and hatching eggs are your most valuable eggs. There are no sick or boarder hens to cut down egg yield in the flock fed Semi Solid Buttermilk.

Eggs from hens fed Semi Solid are larger, and sell for more money. The extra chicks saved because you fed your hens on this feed often makes the difference between profit and loss on many hatches. You raise more money-making chicks when you feed

Semi-Solid Buttermilk

Prof. Harry R. Lewis has been conducting for more than six years an exhaustive comparative test to determine the value of Semi Solid Buttermilk in the raising of poultry from the brooder through the laying season. Over 1800 birds were used. His report and conclusions contain a number of fundamental discoveries on successfully raising the hatch that is of utmost importance to every thinking poultryman. You need this report, it means better hatching eggs and more chicks. The complete results on this test of feeding chicks, growing stock, and the laying flock together with Prof. Lewis' own conclusions, will be sent you on request.

Write for FREE Sample and Prof. Lewis' Report

Write today for free sample and Prof. Harry Lewis' complete report on the value of Semi-Solid Buttermilk for poultry. Please give your dealer's name and address when writing. A postal card will bring it to you. Semi Solid Buttermilk is shipped in barrel lots, freight prepaid. There is a size package for every flock.

The Buttermilk Producers, Inc.

SOLE SELLING AGENTS

110 S. Dearborn St., Room 735-B, Chicago, Ill.

Hudsonville, Mich. Gentlemen:

With reference to the SEMI - SOLID we have been using for the last three weeks, I will say that never before have we had such good results brooding chicks. We have chicks three weeks of age and some of them weigh ten ounces. We fed some skim-milk the first three days, and then placed the SEMI-SOLID before them also and found that they drank the SEMI-SOLID almost again as fast as the skim - milk. They like it better and grow faster than when fed skim-milk. We will start feeding it to the laying and breeding stock also. Yours respectfully, Hudsonville S.C.W. Leghorn Ranch, Hudsonville, Mich.

Without this Label It Is Not Semi-Solid Buttermilk

WM. COOK & SONS, Box A, SCOTCH PLAINS, N. J. ORIGINATORS of ALL the ORPINGTONS

Gem Poultry Association, Dept. 16, Mason City, Iowa

First cock and cockerel have a wide web in their hackle and saddle. Narrow feathered birds at a disadvantage. First cock and cockerel have same deep color on breast as on back, with wide feathers that carry their lustrous surface well into side of fluff. Harold Tompkins also getting away from hairy fluff in females, like brot feathers right through sides of fluff. Color that wins is dark, yet a tone of red in it that lifts it out of the class of mahogany color. Females with wrinkled, gamey faces not seen much of in the whole class; such are poor layers and persistent sitters. Females to win must have a smooth webbing of feather; a silky feathered hen now practically out of it. Both males and females must have same shade of rich color on breast and sides of fluff as on top. As one looks at the winners he marvels that so many kings and queens could be in the Red men's deck. Nothing like it ever before seen.

R. C. Rhode Island Reds—Martin & Wordell, Little Compton, R. I., 2 cock, 2 hen, 5 pl., 3 old pen. Payne Bros., Portland, Conn., 3 cock, 3 cl., 4 pl., 4-5 young pen. Harold Tompkins, 1-5 cock, 1-3-5 hen, 1-2-4-5 cl., 1-2 pl., 1-2 old pen, 1-2-3 young pen. T. Edward Cordis, Longmeadow, Mass., 4 hen, 3 pl. Lester Tompkins, Concord, Mass., 4 old pen. F. H. Clark, Chelsea, Mass., 5 old pen.

Same character of feather, same tone of color wins here as in Single Comb Reds. First cock, the best I have seen on a R. C. Red. Families are better established in Rose Combs; but H. Tompkins has now produced what he wants in Single Combs, and is producing families in his strain. That leads to dominance. Some Rose Comb cockerels need better combs. Entry not as big as in the Single Comb class.

Colored Dorkings—Howard S. Rich, Springfield, Mass., 1 pl. A magnificent pullet.

Silver Grey Dorkings—Frank Edwards, Newton, Mass., 1 cock, 1-2-3 cl. K. O. Svendsen, Westwood, Mass., 4 cl., 1 pl. Still good Silver Greys in New England, with several birds with substantial bodies and good color at Boston.

A. O. V. Dorking—Green Farm, Carlisle, Mass., 1 cl., 1 pl. A fairly attractive pair of Red Dorkings.

S. C. Buff Orpington—Owen Farms, Vineyard Haven, Mass., 4 cock, 2 hen, 2-4 cl., 1-5 pl., 1-2 old pen, 1-3 young pen. Chas. MacNair & Son, Ashland, Mass., 5 cock, 1-3 hen. Henrietta E. Hooker, South Hadley, Mass., 3 cock, 4-5 hen, 2 pl., 2 young pen. Clifton C. Nickerson, Harwichport, Mass., 1-2 cock. Geo. E. Besom, Mansfield, Mass., 1-5 cl., 3 pl. Joshua Shute, Meriden, Conn., 3 cl. Ralph E. Simmons, Pittsfield, Mass., 4 pl. Kingman Farm, Randolph, Mass., 3 old pen.

One of the strong classes of the year, and best ever cooped at Boston. First cock all that an Orpington should be; broad, massive bird, well set on legs, good head, a level sheet of soft buff from tail to tip of neck, uncommonly smooth breast. Second, another big, heavily finished cock; not quite as square across shoulders. Third, darker and tighter in tail; not quite as level colored in neck, breast and back. First hen, active head, smooth webbing of feather, level color all over. Second, close runner-up; not quite as smooth feather over tail. First cockerel, big, with good front, but does not carry width out through back, neck and heavy in comb. Second, another big cockerel, rich lustrous buff; little longer in back; good head. We notice a lemon buff cockerel at sixth place. First pullet, beautiful comb, eye and skull; smooth webbing of feather; full front; not short and squat; a splendid example of moderate quality. One shade of soft buff full of lustre. Second, another magnificent pullet on same order; smooth lines and lustrous, level color; fails to winner in color of eye. Fourth, clear tail, but shorter and smaller; mention this to indicate that it takes more than wings and tail to win this class.

S. C. Black Orpington—John T. Ratcliffe, North Andover, Mass., 1-3 cock, 2-3-4 hen, 1-4 cl. M. W. Brown, Wakefield, Mass., 5 cock, 5 hen, 2 cl., 1-2 pl., 1 old pen. Hinks & Williams, Whitman, Mass., 1 hen. Wm. Wardwell, Stoneham, Mass., 3-5 cl.

Not a large class. First cock heavy in comb. First hen cleaner lines than used to win. Second, another big hen; fuller in fluff. First cockerel, well grown bird; lacks breast; full fluff. Cockerel 1405 would probably have won but was disqualified for stubbs. It would help visitors to understand better if all judges would so indicate on coop tag when a valuable bird must be ruled out. Judges know the law and it is always admirable when they have the will to enforce the law. First pullet attractive; such big, well formed pullets free from excess fluff will rejuvenate the breed.

S. C. White Orpingtons—B. M. Clough, Portland, Me., 2 cock, 2 hen, 3 cl., 3 pl., 2 young pen. W. H. & J. G. Henderson, London, Ont., Can., 1 cock, 1 hen, 1 cl., 2 pl., 1 old pen, 1 young pen. T. B. Farnam, Lanesboro, Mass., 2 cock, 4 hen, 2 cl., 5 pl. Wm. E. Bronke Plymouth, Mass., 3 hen. Ben Milward, Everett, Mass., 1-4 pl.

First cock, big, in nice feather; shows a trace of straw color. Second, white, nice body; trim in neck; more coach horse neck desirable. First hen, a beautiful specimen, white and in good condition. Others not in her class. First cockerel, good conformation; not white. Second, shows straw color and not finished in tail. First pullet, massive, good head and breadth of body; well set on legs. Second, another typical Orpington, making a great pair. Third, tight in tail.

Dark Cornish—Harry Butterick; Fitchburg, Mass., 4 cock, 4 young pen. Ernest B. Stansy, North Bennington, Vt., 2 cock, 2-3-4 hen, 2 old pen. Dr. J. Leslie Davis, Philadelphia, Pa., 1-5 cock, 1-5 hen, 1-3-4 cl., 1-3-5 pl., 1-3-4 old pen, 1-3-5 young pen. John M. Priske, Hudson, N. H., 3 cock, 2 cl. H. Hodgson, Waukesha, Wis., 5 cl. S. C. Tomlinson, Woodbury, Conn., 4 pl. Frank R. Willis, Louisville, Ky., 2 pl. F. H. Clement, Hemstead, N. Y., 5 old pen. C. C. Smith, Wilton, N. H., 2 young pen.

First cock out of condition when we reached him in this report. Second, practically no wing feathers in one wing; no secondaries in others. Third, strong boned bird, broad across shoulders, well set on legs; good wings; top color free from purple. Fourth cock, good bird, smaller. Fifth appears to have main tail feathers absent. First hen, good set, well set on legs; rich ground color, beautifully penciled. Second, well fronted hen, narrowing down in stern better than winner; not quite as good color. Third,

No Valves
to stick
No Strainer
to clog
No Thermostat
to go wrong

Instantly generates a
hot blue flame with-
out priming or pre-
heating.

As simple
to operate
as a good
cook stove

AT LAST, a perfect, oil-burning brooder without valves to stick, strainer to clog, or thermostat to go wrong! At last a valveless brooder that generates a hot blue flame in a jiffy without priming or pre-heating.

The Wishbone Valveless ~ Blue Flame BROODER

is the dependable, oil-burning brooder that you have always longed for.

It has absolutely no valves—the flow of oil is governed by gravity from the 1-gallon reservoir through a big HALF-INCH FEED PIPE. It just CAN'T clog! You light a Wishbone, and except for occasionally refilling the large reservoir, you can forget it for weeks.

And the cost of Wishbones is lower than that of ordinary brooders!

You won't willingly buy another brooder if you really know the Wishbone's advantages. Put down the magazine and **WRITE FOR OUR**

DESCRIPTIVE BOOKLET with prices and sizes, NOW!

Dealers! Hatcheries!

This is a real chance for you to make profits and make friends. Sell your customers the Wishbone Valveless Brooder. It is causing amazement and bringing satisfaction all over the country. Thousands of inquiries are coming in monthly. Get our special dealer proposition and stock up with Wishbones.

American Incubator Mfg. Co.

225 Water Street New Brunswick, N. J.

This cut shows the brooder with part of canopy "P" cut away and burner "E" and chimney "H" cut in two. Also large unobstructed feedpipe "O" from tank "T" to burner, which allows a free flow of oil at all times. No valves to stick, no strainer to clog.

Profit \$5.73 per Leghorn

"Just a line to let you know how I made it last year with my 175 Everlay Brown Leghorn hens. Eggs sold \$575. Used at home \$68. Stock sold \$266. Total receipts, \$909. Cost of feed \$342. Other expenses \$44. Total expenses, \$386. Cash profit \$523. Value young stock, 300 pullets, \$450; 20 cockerels, \$40. Total profit, \$1,013. Profit per hen, \$5.73. J. D. Miller, Paducah, Ky."

"I won 1st cock, 1st cockerel on my Everlay strain Brown Leghorns at Missouri State Show in class 237, largest ever shown. Another feather in your cap! Mrs. G. McCollom, Unionville, Mo."

Build For the Future.

Eggs \$5; \$7.50 and \$10 per 15; guaranteed.

WILLIAM N. OTTO 5425 College Ave. INDIANAPOLIS, IND.

wide hen, short shanks. Good quality in hen class. First cockerel, big, massive bird; broad shoulders; heavy shanks that are not long. Second, a heavy, solid bird; very heavy bone for a cockerel; short, narrow back feather; bowed out little in left leg. Third, a rangier bird. Fourth, flat breast. Fifth, considerable purple in black top color. First pullet, splendid bone, not quite as wide in shoulders. Second fails to winner in lighter ground color. Third, more legs.

White Cornish—F. H. Howland, Worcester, Mass., 1-2 cock, 1-2-3 hen, 1-2 ckl., 2-3-4 pl., 1 old pen, 1 young pen. Myown Poultry Farm, Ellenville, N. Y., 3 cock, 4 hen. C. C. Smith, 4 ckl., 1 pl. L. J. Smith, Deep River, Conn., 3 ckl. Chas. E. Hollis, Hoosick Falls, N. Y., 2 old pen.

Class shows marked improvement in color, with type coming but more slowly.

White Laced Red Cornish—J. W. Williamson, Princeton, Ind., 1 cock, 1-3 hen. C. H. Smith, Warrenton, Va., 2-3 cock, 2-4-5 hen, 2-5 ckl., 3-4 pl. Wm. R. Emslie, Barre, Vt., 4 cock, 3 ckl., 5 pl. Ernest B. Stanley, North Bennington, Vt., 1-4 ckl., 1-2 pl., 1 young pen.

Best class ever cooped. Interest growing apace. Females are showing beautiful lacing, with males steadily improving. Breasts are a beauty section, color and lacing matching wing bows and backs perfectly in first, second hens and first pullet.

First and second pullets also have red necks laced with white, an important point. Third pullet has nothing more than type. Second cockerel, a narrow feathered fellow. Tendency of breeders seems to be not to breed too short and narrow a feather, approaching the Darks. Some will say "because they can't." Others will say "We want size and breadth combined with graceful lines; not sluggishness that goes with slow breeders and stock none too prolific." This is a growing issue. Cornish club is active, distributing Cornish literature to visitors all through the week.

Buff Cornish—J. W. Bloom, Altoona, Pa., 1-2 ckl., 1-2-3 pl., 1 young pen. Advancement in color, first cock and second pullet showing this advancement in color.

S. C. Brown Leghorn—Dorman & Anderson, Bridgeport, Conn., 1 cock, 3 hen, 1 pl. Lewis, Cliftondale, Mass., 3 cock, 4 hen, 3 ckl., 4 pl. 1 old pen. Harry W. Weeks, Framingham, Ctr., Mass., 2-4 cock, 1-2 hen, 1-2 ckl., 2-3 pl. Walter W. Smith, Wakefield, Mass., 4 ckl., 5 pl.

Many admirers of this beautiful variety. Class not as fast as last year. First cock, good all around bird. Back and tail of second join more abruptly. Third, a nice, striped bird, not so much quality in fourth. First hen, soft colored, big, good bodied hen. Second, not as smooth over wing bow. Third, grayer color. Fourth, in wrong class. First cockerel, heavy in comb. Second, smaller. Third, more angular in type. Fourth, darker ground color with some black in lower hackle. First, second pullets, nice pair. Third, grayer. Fourth, wrong class. Fifth, do not know what she is good for.

R. C. Brown Leghorn—Gus Stadler, Altoona, Pa., 3 cock, 3-4 hen, 1 ckl., 1 pl. N. B. Hartford, Rockland, Mass., 1 cock, 2 hen. W. D. Hobden, Lonsdale, R. I., 2-4 cock, 1-5 hen, 3-4 ckl., 2 pl. Walter W. Smith, 2 ckl., 5 pl. Wm. E. Blood, Townsend, Vt., 4 pl. Fred C. Mather, Brunswick, Me., 3 pl.

An assortment of different kinds. First cock and cockerel with some of the best of females the tops. In fact, the first pullet a rare specimen.

S. C. White Leghorn—Henry P. McKean, Jr., Beverly Farms, Mass., 1-2-3 cock, 1-5 hen, 1-2-3-4 ckl., 1-2-3-4 pl., 2 old pen, 2 young pen. Rogers White Leghorn Farm, Elgin, Ill., 4-5 cock, 3 hen, 5 ckl., 1 old pen, 1 young pen. John F. Chaponi, Kensington, Conn., 4 hen. Foster Bros., Pawtucket, R. I., 2 hen. Wm. Hulcup Amherst, Mass., 5 pl. Robert A. Barnard, 3 old pen. Geo. A. Davidson, West Millbury, Mass., 4 old pen.

The best class seen in Boston since Dan Young and Geo. Kerr of Mac Alpine Farm came into Boston show. Favorable comment on judging. No puffed saddles, such as threatened to become an issue in Eastern shows. Good heads, nice type, pure white color throughout winners. First cock could stand little better furnish of tail, and trifle finer texture of feather would not be amiss on first hen. First cockerel, beautiful head; nice back and tail; in good condition. Second, another well turned White Leghorn male, with nice breath of feather; not quite as smooth texture, of comb as winner. First, 2nd, 3rd, 4th pullets in a row, and a fine lot; but feather same length, and backs, nice bodied, clean yellow shanks. Rogers travels a thousand miles; reaches Boston in zero weather; puts down two pens, that are beautifully matched and wins 1st old pen, 1st young pen. It takes courage to start your horses on the fast tracks of the grand circuit of the east; moreover, it takes quality to stand up under the loss of bloom incident to shipping and still win out. Great credit goes to the west. Hats off to the man who did it.

R. C. White Leghorns—J. M. Chase, Wallkill, N. Y., 1 cock, 1 hen; 1-2-3 ckl., 2 pl. H. H. Lyon, Morrisville, Vt., 4-5 ckl., 1-3 pl. Small entry, with 1st cock, hen, cockerel and pullet of good quality.

S. C. Buff Leghorn—Monmouth Poultry Farm, Frenau, N. J., 1-4 cock, 1-2 hen, 2-4 ckl., 1-2 pl., 1 old pen, 1 young pen. Hikori Orchard, Apopau, R. I., 3 cock, 3 hen, 5 pl. Pine Top Farm, Weston, Mass., 2 cock, 5 hen, 3 pl. Wendell Dean, Waltham, Mass., 4 hen, 4 pl. 2 young pen. Mrs. A. P. W. Heath, Stonington, Conn., 1-3-5 ckl. Homer N. Simpson, Suffern, N. Y., 2 old pen. Strong class. First and 4th cocks two birds unplaced at Chicago which we referred to as two best cocks in class. First, 2nd hens, typical Leghorns; good color. First and third cockerels, uncommonly large Buff cockerels. Second another good male. First pullet, White Leghorn type and level, soft color. Second, not as good in shank color; close runner up.

Black Leghorns—John A. Davis, Campello, Mass., 1 hen, 4 ckl., 1 pl. Jessie B. Spencer, Canton, Mass., 1-2-3 ckl., 2-3-4 pl. Still a little more type needed.

Silver Leghorn—Myown Poultry Farm, 1 cock, 1 hen. Only fair.

Silver Penciled Leghorns—Oak Hill Poultry Farm, Montello, Mass., 1 cock, 1 hen, 1 ckl., 1 pl. Archie A. Ashley, Medford, Mass., 2 ckl. Penciling on 1st pullet something of an attraction.

**Use This
Feed**

Raise Every CHICK!

← **Here's the Food that Starts 'em Right**
The First 8 Weeks is the most critical time in the life of

any chick. We guarantee **Quisenberry Quality Buttermilk Starting Food** to eliminate more bowel trouble, to insure more certain and rapid growth, to prevent more loss, to put more vitality in the chicks, and to produce better results in starting and raising young chicks than *any starting food ever made*, regardless of make or price. This guarantee backs every sack. Don't experiment. Start your chicks on **Quisenberry Buttermilk Starting Food**.

FREE DRINKING FOUNTAIN

For one month only, White Enameled Chick Drinking Fountain will be given FREE with each sack of Quisenberry's Buttermilk Starting Food. Fits any Mason Jar. Keeps water pure and clean. Chicks cannot become wet and chilled. This Starting Food is for sale by all dealers. This offer is good with any dealer to whom you present the coupon.

A Feed Hopper Included in this Free Offer

For thirty days we authorized every dealer to give each purchaser a hopper free with each sack of our Laying Mash. Call at your nearest dealer and get your FREE HOPPER.

**See your dealer
at once and get
started right.**

QUISENBERY QUALITY

BUTTERMILK STARTER

You will marvel at the results. If your chicks are weak from poor incubation or lack of vitality because of poor breeding stock, this Starting Food will bring them right out of the kinks.

Start them right and the rest is easy. One sack will start a large flock. They will grow and feather twice as fast if you use Quisenberry's Starting Food. Makes chick raising easy.

Big Hatches of strong, healthy chicks are guaranteed to all those who use Quisenberry's Buttermilk Laying Mash. If you use this Laying Mash as directed, we not only guarantee you **more eggs** than you can get by using any other feed, but we guarantee that you will have **bigger hatches**, less death in the shell, and fewer weak chicks. Contains the proper elements that store vitality in the hen, fills the eggs with meat and vigor, increases fertility, and insures big hatches of husky chicks. **Free Hopper with Every Sack.**

White Leghorns" remarkable book tells how to mate, judge, feed, cull, prepare for show, sell and advertise, etc. Given free with 3 year subscription to Leghorn World at \$1.00. Send dollar bill today.

THE LEGHORN WORLD, 6131 Bremer Ave., Waverly, Iowa

Black Minorcas—John McKinzie, Milton, Mass. 2-3 cock, 5 hen, 4-5 chl, 5 pl. Calvin J. Gardner, Allentown, Pa. 1 cock, 1-4 hen, 1-2 chl. 1-2 pl. Jas. H. Hillens, Keene, N. H. 2-5 hen, 3 pl. Chas. H. Hodgate, Fall River, Mass. 3 chl. 4 pl.

An exhibit especially worthy of mention. Few ordinary birds in the class, with 1st, 2nd cocks, hens, cockerels and pullets, big, well finished, long bodied, good stationed, beautiful green black specimens. Good size throughout these winners.

R. C. Black Minorca—Walter S. Adams, Pt. Chester, N. Y. 1 cock, 4 hen, Mrs. E. A. Washburn, Taunton, Mass. 1-2 hen, 1-2 chl. 1-2 pl. Wendell Phillips, Woonsocket, R. I. 3-5 hen, 3-5 chl. 3-4 pl. A. H. Chase, Berwick, Me. 4 chl.

Best class seen in some years. Large size, length of bodies, good heads and strong bone all through. Do not know when we have seen such females as 1st, 2nd hens and pullets. First cockerel, big rangy fellow with good head.

White Minorca—Fred L. Baker, Hudson, Mass. 1 chl. 1 pl.

S. C. Buff Minorca—P. J. Van Dael, Malden, Mass. 1 chl.

R. C. Buff Minorca—P. J. Van Dael, Malden, Mass. 1-2-3 cock, 1-2-3-4 hen, 1-2-3-4 chl. 1-2-3-4 pl. 1 young pen. What appears to be too much Orpington blood, with rangy Minorca qualities still needed.

Blud Andalusian—John McCourtie, Winchester, Ont., Can. 1 cock, J. E. Bliss, Clinton, Conn. 2 cock, 3 hen, 3-4-5 chl. 3-5 pl. Harold E. Pedley, Bristol, R. I. 4 hen, E. D. Bird, Greenwich, Conn. 1-2 hen, 2 chl. 2-4 pl. L. D. Steadman & Son, Westerly, R. I. 1 chl. 1 pl.

First cockerel a blue bird; large, upstanding. First cock, another good male. First pullet, nicely laced.

S. C. Anconas—Geo. F. Williams, Waban, Mass. 5 cock, Leroy L. Lambert, Apopka, Fla. 1-2-3 cock, 2-3 hen, 1 pl. 2 young pen. Robt. B. Rich, Worcester, Mass. 3 cock, 2 pl. C. E. Johnson, Ligonier, Pa. 4 cock, 1 young pen, John W. Byram, Ashaway, R. I. 1 cock, 5 hen, Dr. N. A. DeWitt, Stoneham, Mass. 4 hen, 4-5 pl. 3 young pen. Jos. H. Wheatley, Pawtucket, R. I. 1 hen, Wm. R. Speck, Utica, N. Y. 3 chl. 3 pl. A. S. Troja, Utica, N. Y. 1-4 chl. Maurice C. Peters, No. Bennington, Vt. 2 chl. Isaac Jackson, Attleboro, Mass. 5 chl.

Strongest Ancona classes in both combs ever shown at Boston. First S. C. cock, good head, sound color, nicely finished tail. Females show mottling and rich black ground color. First hen, good type and mottling. First cockerel, sound color. For tipping on backle and saddle combined with nice style, 2nd S. C. cockerel fills the bill. Not many show such mottling on top. First and 2nd pullets have size, sheen and type.

R. C. Anconas—Leo, M. French, 1-2-3-5 cock, 1-2-3-4 hen, 1-3-5 chl. 1-2-4 pl. 1-2 old pen, 2-5 young pen. John R. Rogerson, West Medway, Mass. 4 cock, 5 hen, 3 pl. 4 young pen, Chas. H. Curtis, West Medway, Mass. 2 chl. 5 pl. Geo. W. Day, Lexington, Mass. 4 chl. Maurice C. Peters, 1 young pen, H. E. Keeler, Whittinsville, Mass. 3 young pen.

A decidedly good class of Rose Combs. Marked improvement here. Some good cocks in winners. First and 2nd hens are well tipped. First cockerel, nice profile, good head, well finished plumage. Second, larger, more breadth and substance. Pullets, again nice type and color.

W. C. Black Polish—Edward S. Stein, Buckland, Conn. 1 cock, 2 hen. Mrs. Mary McLeod, Lexington, Mass. 2 cock, 2 hen, 1-2 chl. 1 pl. Good size and bodies here, with nice crests.

Silver Polish—Hiram W. Schriver, Groton, Conn. 1-2 cock, 1-2-3-4 hen, 1-2-3 chl. 1-2-5 pl. A. Mowll, So. Manchester, Conn. 4 cock, 5 hen, Idlewhile Farm, Sayville, N. Y. 3-4 pl. First hen especially well laced with good type and substance. First cock, well laced bird of good substance.

White Polish—Idlewhile Farm 1 cock, 1-2 hen, 3-5 pl. 1 old pen, Lewis W. Johnson, Closter, N. Y. 1 chl. 1-2-4 pl. First cock and first hen pair of magnificent birds.

Bearded Silver Polish—Pastime Farm, Allentown, Pa. 1-2-3-4 cock, 1-2-3-4 hen, 1-2-3-4 chl. 1-2-3-4 pl. 1 young pen. Here is outstanding quality with size, substance of body and lacing, especially in first cock and hen.

Bearded Buff Laced Polish—Edward S. Stein, 1-2 cock, 1-2-3 hen, 1 pl. 1 pen. Females are surely attractive and make a beauty breed when seen in such quality as 1st, 2nd, 3rd hens.

Black Hamburgs—John Lowell, Chestnut Hill, Mass. 2 cock, 2 chl. 3 pl. E. P. Saltonstall, Chestnut Hill, Mass. 1-4 cock, 3-4 hen, 1-3 chl. 1-5 pl. E. A. Kühlen, Everett, Mass. 3 cock, 1 hen, 2 pl. Lyman & Storor, Waltham, Mass. 2-4 hen, 1 young pen. Mrs. Ralph Lowell, Dedham, Mass. 4-5 chl. Adrian Christoffelo, Everett, Mass. 4 pl.

First cockerel a big fellow; lobe about like a silver dollar; nice comb with straight leader; an upstanding fellow with graceful lines; magnificent broad feathers grown away out, cover tail. First cock, another very broad feathered bird, with head as fresh as a cockerel; deep green color. Rich deep sheen on 1st and 2nd pullets. 1st and 2nd feathers long and curving; and with 1st and 2nd hens have good size, big lobes, fine combs. Such quality is enough to discourage breeders from attempting to breed better ones.

Silver Spangled Hamburg—John Lowell, 2-5 cock, 2-3-4 hen, 1-2-5 pl. 1 young pen, Dr. J. S. Wolfe, Bloomfield, N. J. 1-3-4 cock, 1 hen, 2 chl. Robt. Treat Paine, 10 State St., Boston, Mass. 5 hen, 1-3-4-5 chl. 3-4 pl.

Largest and best class of S. S. Hamburgs in the country; nothing else like it. First and 2nd pullet, as big as good size White Leghorn, large spangles all over. First hen necessarily of same quality. First cockerel, spangled on every feather from head over neck and saddle to tail. Other winners on same order, with close decisions necessary. Very little rust in cock class. This class could be split up and provide winners for all the big winter shows of U. S.

Golden Spangled Hamburg—John Lowell, all prizes.

Golden Penciled Hamburg—Edwin W. Dwight, 95 Milk St., Boston, Mass. 1-2 cock, 1-2 hen, 2 chl. 1-2 pl. Isaac Sprague, Jr., Wellesley, Hills, Mass. 3 hen, 1 chl. Strong class; First hen a marvel;

GREIDER'S FINE CATALOG

of fine bred poultry for 1922; all choicest breeds illustrated and described; information on poultry, how to make hens lay, grow chicks—all facts. Low price on breeding stock and hatching eggs. 30 years in business. This book only 10c. Send today.

B. H. GREIDER, Box 101 RHEMS, PA.

beautiful, clear cut black penciling on rich ground color.

Silver Penciled Hamburg—Isaac Sprague, Jr., 1 cock, 1-2 hen, 1 chl. 1-2 pl. 1 pen. John Lowell, 3 hen. Not as good females as some years ago; looks like single mating.

White Hamburg—Edwin W. Dwight, 1-2 cock, 1-2 hen, 1-2 chl. 1 pl. First cock especially attractive.

Silver Campine—Chas. H. Curtis, West Medway, Mass. 2 chl. Mrs. Calvin Austin, Dunstable, Mass. 1 chl. 1 pl. 1 pen.

A light entry. Homestead Campine farm stayed out of competition with the hope of stimulating new breeders to show. One year is perhaps not enough. We will not take the edge off the birds that were entered in competition by commenting on the beautiful pen of ten pullets that the Homestead farm had on display.

Golden Campine—Wm. A. Castle, Worcester, Mass. 1 cock, 1 hen.

Buttercup—C. Sydney Cook, West Newton, Mass. 1 cock, 1-3-4 hen, 1 chl. 1-2-4-5 pl. 1 young pen. Dr. Rufus J. Howe, Worcester, Mass. 2-3-4 cock, 2 hen, 3-4 chl. Wm. J. Burke, Worcester, Mass. 2-4 chl. P. J. Darby, West Newton, Mass. 3 pl.

A consistent display, not swelled in numbers by wasters. First cockerel, a well built rich colored, well finished bird. Females show correct makings. Nice size, type and color in 1st pullet. Class as a whole more uniform in color with markings well set.

Salmon Faverolle—L. E. Tyler, Brocton, Mass., 1 cock, 1 hen, 1 chl., 1 pl.

Four grand specimens. Males free from red. Beautiful muffs and beards on hen and pullet. Good size and type in all four birds.

Lakenvelder—Burleigh A. Jones, Lakeport, N. H., 1-2 chl.

Speckled Sussex—Geo. A. Mole, Lenox, Mass., 1 cock, 1 hen, 4 chl., 5 pl. L. H. Lincoln, Ions Brooks, N. S. Can., 2 cock, 2 hen, 2-3 chl., 4 pl. Jas. Wm. Doherty, West Roxbury, Mass., 1 chl., 2 pl., 1 young pen. Dwight D. Elliott, Winchester, Mass., 1-3 pl.

First cock, small. Second, orange top color. First hen, big, attractive markings. First cockerel, nice. Second, poor. First pullet, good size and type; neat white tips; black bar needs a little strengthening. Why do not Sussex men with one of the oldest and best of all the English breeds ask that their birds be cooped in the English class?

S. C. Rhode Island Whites—O. G. L. Lewis, Paoli, Pa., 4 cock, 3-5 hen, 2-5 chl., 3 pl. Liberty Hall Poultry Farm, Hartford, Conn., 3 cock. F. W. Cumpstone, Waterford, Conn., 1 cock, 1-2-4 hen, 1-4 chl., 1-2-4-5 pl., 1 young pen. Dominion Poultry Yards, London, Ont., Can., 2 cock. A. J. Cedergren, Brockton, Mass., 3 chl.

R. C. Rhode Island Whites—Nathan H. Hartwell, Bourneville, Mass., 4 cock, 1 hen, 2 old pen, 2 young pen. Dominion Poultry Yards, 5 cock. Stewart & Byble, Ossining, N. Y., 1 cock, 5 hen, 2 chl., 5 pl., 1 old pen. A. J. Cedergren, 2-3 cock, 2-4 hen, 3 chl., 3 young pen. H. B. Plummer, East Kingstown, N. H., 3 hen. F. W. Cumpstone, 1 chl., 1-2 pl., 1 young pen. F. V. Raymond, Bridgeport, Conn., 4-5 chl. James Pyne, Brockton, Mass., 3-4 pl.

Seem to be many of these birds cooped. Some of the Rose Combs are rather too short in body. First Single Comb cockerel attractive, and can be shaped either like a Red or a White Rock, depending on how you pose him. Understand one breeder of Rose Comb Whites in Rhode Island has been using White Wyandotte males last two years and selling chicks as utility White Wyandottes. It remains true that the long Red type is practical, having a good bread basket in front and egg capacity behind. R. I. Reds came forward in the face of pointed criticisms and tremendous pressure, and these plain looking white chickens numbered 114 at Boston notwithstanding that no breeder of major rank has encouraged them or will scarcely recognize them as a breed. Rose Combs here or elsewhere outnumbered the Single Combs.

The Male.

There is something that has not been made as plain as it should be, and I fear it is going to be misleading. I stated in my recent article on Partridge Wyandottes that "in adding new blood do it through the female." I had reference to those who have A No. 1 stock. Furthermore, I made the statement because in parti-colored birds that are penciled, one can have a very good looking male, and, not knowing what is back of him in the way of breeding, he might ruin this whole flock. Therefore we want to use the female for the injection of new blood as we can see what she really is from a breeding as well as standard viewpoint. But, now, in the case one has just ordinary stock and wants to improve them, he can get the best results by going to a reliable breeder and getting a good male. That would do the most good, as the male is one-half of the pen, and if there are ten females in the pen that he wants to improve, a good male from any reliable breeder will give the best results. If such a breeder brought in the new blood from the female side to improve his stock, he would have only one good bird in the pen, and if the male is no good, he would make no headway.

Ohio. Chas. E. Kraner.

Indiana Agricultural College reports that they have received an average of seven inquiries a day for poultry house plans since September 1. That is a good index of the increasing interest in modern poultry practice.

Funk's International Strain S.C.W. Leghorns Win Again at ILLINOIS STATE SHOW

in heavy laying classes. First, second and third cock; first, second and third cockerel; first, second and third hen; second, third and fourth pullet.

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

Many agricultural products are depressed and are selling at prices below cost of production in many sections of the country. But apples and eggs are bringing big prices over the north and east. Apples and eggs are a mighty good combination and one which every poultry grower purchasing acreage should seriously consider. Apples of quality are selling at prices which bring a big profit to the grower. So it is with eggs. An apple orchard is an ideal place for fowls and chicks and the growing stock.

* * *

I am writing you to get your opinion on a bulb farming proposition, gladiolus, tuberoses, dahlias and cannas. I have raised quite a number of these flowers, but never offered them for sale, but I am thinking of doing so in addition to my poultry. Would you advise planting in large or small quantities. I am thinking of moving to Neosho in the "Ozark Play Ground" country. Missouri. R. M. Williams.

The growing of such bulbs and plants as you name and the sale of same is highly specialized and is in the hands, commercially, of a comparatively few people. I would not advise you to take up this proposition until you had arranged with some dealer in St. Louis or elsewhere, or some nurseryman to take a given amount of stock annually, and in a contract running for a long period.

* * *

I have an acre of ground on which I am going to build in the near future and want to plant some fruit on it. I want some quinces, apples, early and late peaches, cherries, white and red plums. What I am figuring on is just one or two trees of each kind of all the varieties that I can comfortably plant, that will come in good for home use, in the limited space I have. E. G. Smith. West Virginia.

You can plant considerable fruit trees on an acre of ground. In apples, plant Henry Clay, Yellow Transparent, Duchess, Wealthy, Golden Delicious, Delicious and Stayman Winesap. These ripen in order named. Orange quince is best. You will find Stark Early Elberta a wonderful peach. Plant the Awe Elberta, J. H. Hale and Krummel. You will, by so planting, have peaches over the entire season. Early Richmond and Montmorency are the best cherries. The Omaha, Terry and America plums will surely meet your requirements.

* * *

Would you please give me information in regard to cutting and starting Concord grapes. I have an abundance to cut and start, but I am not familiar with the method. I am told to cut 3 buds on a stem and put in bundles of 100 or 300 and dig a trench and place the cuttings in the trench, tops down, and cover to a depth of 2 to 4 inches and as time goes on start to uncover gradually. What next and how? Give me your method, please. I am trying to make a go of poultry and fruit in northwestern Arkansas. F. S. Boyce. Arkansas.

Your method of handling grape cutting is all right. You should, however, bury the cutting at least one foot deep,

Then cover with some litter to prevent frequent freezing and thawing. In the spring plant in rows, cuttings about 8 to 12 inches apart, with rows wide enough to admit of thorough and frequent cultivation. The following spring plant the young vines where you wish them to fruit.

* * *

I would like to know what apple tree for family uses are best adapted for this climate. The Ozarks run through our county, (Pope.) What peach is best?

Which Leghorns would be best for me to start with to sell stock and eggs from, English or American? Are the English easier to confine than American. Last year I hatched a few Leghorns in March, they laid in the summer and then went through a light molt and it was 5 or 6 weeks before they laid again. What month is the best to hatch Leghorns for layers? Frank H. Staubitz. Missouri.

The Delicious, King David and Black Ben make a winning combination for your section. The American White Leghorn is the most beautiful and useful White Leghorn in all the world. It is superior in every way to the English Leghorn. It is better to hatch your Leghorns in April if you would get the most eggs from the pullets during the following winter season.

* * *

I have bought four acres of what was a part of Camp Taylor, Ky., and want to raise white Leghorns and Light Brahmas; would like to put out some fruit trees, peach, apple, pear and cherry. What kind would do the best in this climate? Thos. W. Beal. Kentucky.

The Henry Clay early apple, earliest of all apples, is a native of Kentucky and a valuable apple, either for home use or commercial growing. Follow these with Duchess and Wealthy in order named. For winter plant Delicious and Golden Delicious.

* * *

I intend to buy a 40-acre farm near Iola or Yates Center, Kas., and raise poultry for market and eggs, keep a few good cows, a few hogs and raise the feed I need. Am thinking of doing some truck farming, but can not decide what kind of fruits or vegetables we should grow, as I have never seen that part of the state and do not know what it is. What do you think about it? I have the intention of buying a small farm there, but some of my friends here are trying to talk me out of it. They say Kansas is no good. Would you advise me to move there? I have a wife and 3 small girls. How about the markets there? My wife thinks Marion, South Dakota, is better. Which would you prefer? At present I am farming a 120-acre farm and pay \$14 per acre rent, which I can't make on this farm. I have my stock machinery and tools paid for and a few thousand dollars at interest. What should I do, because I cannot make ends meet by keeping on renting here for the rent is too high. We haven't so very much experience in poultry except what we raised on the farm, about 850 chicks, this year, and have good luck with them, and we are interested most in poultry at present.

Iowa.

Joseph Hebers.

Here is a letter full to overflowing with human interest and human interest is the most interesting thing in the

Used for feed, milk or water

They Save Chicks—

They Raise Chicks—

They Save Labor—

They Save Feed—

They Increase Profits—

CONKEY-NORWICH CHICK FEEDERS

THE thousands of users of these perfect chick feeders often express wonder at the marvelous results they give. The explanation is simple:—

Chicks are most susceptible to bowel disorders, which are due to intestinal germs. Droppings of one sick chick in food or water supply infect the whole brood and heavy loss is sure to follow.

Conkey-Norwich Chick Feeders *positively prevent all contamination* and the healthy chicks remain healthy—and grow.

For this single reason alone it will pay you to use Conkey-Norwich Chick Feeders. But consider additional advantages:—Large feeding space—no

crowding—no chicks hung or stuck in openings—no drowning in milk or water. Always clean to handle because chicks cannot roost on wire guard. Feed, water or milk always available, yet always protected and none wasted. Easy to fill and clean. Rain guard permits use on open range. Simple—practical—inexpensive—durable—made of heavy galvanized metal—highest quality workmanship.

Conkey-Norwich Chick Feeders are used and strongly recommended by such authorities as Prof. T. E. Quisenberry, Prof. Harry R. Lewis, Mr. U. R. Fishel, Pennsylvania Poultry Farms and a host of others.

Order a supply of these feeders *now*, have them ready when your first brood is hatched. An early-season test will show you how to grow more chicks this year. Get the Conkey-Norwich from your local dealer or order direct. See prices below. Descriptive circular mailed free on request.

Name.....

Address

world. I wish I was wise enough to solve the life problem for this man and his wife. I wish I could, but I cannot. I believe, Mr. Hebers, you will make a great and far-reaching mistake to buy land in Kansas or elsewhere without thoroughly understanding conditions. A man with wife and three children should be very cautious as to making an investment in a permanent home. It is evident that you are floundering in the sea of doubt and inexperience and indecision. You and your wife should give this matter far more serious consideration than you evidently have given this matter. It means much to you all, involving as it does the welfare and happiness of you all. Decide just what sort of farming you wish to engage in and then go to the section adapted to this character of farming and thoroughly investigate conditions—land values, social conditions, market facilities, etc. Guard carefully the money you have on interest. Do not allow this to be lost in any bad investment.

* * *

Am thinking of starting in the poultry, bee and fruit business on a small place west of this city. Soil is a gravelly sand near a small lake and comparatively level. Seems to be a good locality for fruit. Will set out about an acre of cherries (100 trees) early Richmond, Mont Mouncey for sour and Black Tartarian and some other kinds for sweet. Have I made a good selection, and what other kind of sweet cherry would you suggest? Will raise small fruits and there is a young apple orchard of perhaps 200 trees in bearing on the place.

Have been let out of a corporation on account of age and feel that the above proposition is about the only chance I have of making good. What is your opinion—

Michigan. Chas. E. Richmond.

You will find that poultry, fruit and bees make a very profitable combination if you will give careful attention to all the required details. The location you have selected is a very favorable one. The water of the lake will be of service in holding back early bloom. The Windsor select cherry will be a fitting companion for Black Tartarian. They will polonize one another's bloom and thus give you added fruit. You ought to tackle the proposition with a determination to "make good." I feel confident you will do so.

* * *

Please tell me how best to send eggs for hatching to Germany. How old should eggs be to give good results in hatching?

New York. Henry Neiss.

Consult the American Express Company in your city. The company will give you full and detailed information, telling you just how to make the shipment. The eggs should not be over seven days old. In fact, they should be as fresh as possible. Shipping eggs for hatching across the Atlantic has never proven satisfactory.

* * *

I have bought a small home consisting of 62-3 acres in northeastern Missouri, Clark county, about 45 miles southwest of Fort Madison, Ia. I expect to raise chickens and to put out a small family orchard in the spring, consisting of apples, cherries, plums, peaches, pears, grapes, raspberries, blackberries, gooseberries, strawberries, currants, rhubarb. Will you please inform me as to what varieties, and how many of each I will need. I want my apples to rotate from the earliest variety to late winter. I have decided on the "Golden Delicious" and "Stayman Winesap," but am undecided on the other varieties. What size or age trees

Your Money Back

WE GUARANTEE that, if you will divide an orchard, your worst or best, in two parts equal in general condition, and for three years spray one part with Scalecide according to our directions and the other part with lime-sulphur, giving the same summer treatment to both parts, the parts sprayed with Scalecide will be better than the part sprayed with lime-sulphur—in the judgment of three disinterested fruit growers—or we will refund the money you have paid for the Scalecide.

Scalecide controls scale, fire blight canker pear psylla and aphids—and it does more; it has an invigorating effect upon trees and foliage, insuring plumper fruit spurs and a better chance for fruit the following year. Write today for information and price. Address Dept. 21.

BRED-TO-LAY SINGLE COMB White Leghorns EXCLUSIVELY

Hatching eggs from high producing females mated with selected males whose dams laid 200 to 270 eggs in one year, at prices you can afford to pay.

SILVER GROVE POULTRY FARM R. R. MARION, IND.

would be best to buy. The catalog recommends to buy from 4 to 7-foot trees, but does not state age. H. W. Sassey.

Iowa.

You have made a splendid selection of winter apples. Inasmuch as you wish to cover the entire apple season you should plant Henry Clay, Yellow Transparent, Duchess and Wealthy, also. This will give you apples from extremely early until very late. In cherries plant Early Richmond and Montmorency. You will find Omaha, Terry, Wyant and Surprise best of all plums for your planting. I advise you not to plant peaches except in a very limited way. You will not get a peach crop once in three years. You might plant a tree or two of Eureka, Mayflower, Early Elberta and J. H. Hale. The Keiffer, Seckle and Lincoln pears will give you satisfaction. It is best to plant the Garber pear with the Keiffer as the Garber polonizes the bloom of the Keiffer. The Moor's Early, Wonder, Virginia and Concord grapes will give you abundant crops and are hardy varieties. Royal Purple, Cuthbert and Cumberland are the best raspberries, while Monsea is best blackberry for your planting. The Dewdrop, Haveland, Gibson and Sample are best strawberries. You certainly should plant some Red Cross and Fay currants and Oregon Champion gooseberry. Victoria is a splendid rhubarb.

I advise you to plant two-year-old apple trees. Yearling trees in other fruits are all right. Also yearling stocks in grapes and other small fruits. The number of such trees and vines to be planted depends upon your liking for the fruits and your market for same.

* * *

I am a general and dairy farmer in northern Wisconsin. I want to sell here and engage in the poultry and fruit business. Am writing you as to a good location. I have had no experiences with fruit and poultry, but am well posted on the theory of the same, and am willing to watch practical men and take their advice. I have a small poultry flock and am quite successful in getting eggs, but believe I could do much better with better hens for mine or just common stock. I want to get a fruit farm and raise poultry and keep a few cows. Where would you advise me to locate? I can buy small fruit farms along Michigan's west shore, with buildings in good condition; good soil and location for about \$10,000 a forty with perhaps 25 to 30 acres of fruit, apples and peaches, in fairly good condition, while in the west everything is away up. Now would you advise me to buy a fruit farm or buy a good location and plant young trees and do you think the east and middle west fruit sections are as good as the western ones. C. V. Porter.

Wisconsin.

I never like to advise a man to go into the commercial fruit and poultry business who has had no experience in these lines of business. It is a dangerous thing to do for any man. You are evidently a success as a dairy and general farmer. Why not stick to this line of farming and "leave well enough alone?" Were I buying a fruit farm my personal choice would be an orchard in the east—New York, Pennsylvania or Virginia. The advantages there are many. The best market in the world is at our door. The soil and climate are adapted to fruit growing. There will always be profitable apple orchards and men will be happy and prosperous there, but the east affords the better advantage to the fruit grower.

Planet Jr. hoes quicker and cleaner

A Planet Jr. wheel hoe makes light work of the kitchen garden. There's no vicious chopping and stabbing at tender, growing plants when you use this No. 12 Planet Jr. Double and Single Wheel Hoe Combined. Not only does it hoe closer to the row than you can safely work with the old hand hoe, but it does much more—and better—work than you can do in the old way. No. 12 straddles and hoes both sides of a row at once, sliding easily along as you walk. The sharp hoes clip weeds clean off below the surface, and leave a fine protective mulch. So easy to handle, a woman or boy can easily do the garden work, saving

man labor for other more pressing farm work.

Berries and Poultry

INTENSIVE and diversified farming makes for success in both small fruits and the poultry business. Baldwin's Fruit Growers' Guide is the best book yet published for farmers who specialize in poultry and berry growing. It gives you information on berry culture in a concise, practical form, handsomely illustrated, describing the standard varieties and everbearing strawberries, raspberries, blackberries, dewberries and grapes. It tells you how to get the biggest crop of the most delicious and finest fruit with a small outlay and little care and attention. Baldwin's experience of a third of a century and Baldwin's supremacy in the berry plant business is your guarantee of success. Poultry, eggs, luscious fruits and fresh vegetables constitute a large part of the table supply. Berries grown for market make a profitable business for the poultryman, as they come in the quieter season.

POULTRY, GARDEN AND FRUITS

make a safe and paying combination. Plant Baldwin's Berry Plants and produce healthy food. We have made a lot of changes and improvements in our Big Berry Plant Business, but we have never changed our policy of square dealing since our business was established a third of a century ago. Ours is a live-and-help-to-live policy. This principle was established by my father, by and through which we hope to hand it down to our growing up sons as untarnished as we found it. It is more than a business with us. It is a life, a service. We treat every order received through the mails just as we would treat you personally if you drove to our packing house for your plants. We sell plants by their true names, free from disease, freshly dug from our new ground for your order. Heavily rooted. Packed and shipped in the most approved manner to reach you in good condition at planting time. We have millions of plants, but the sure way to get them is to order early. Late orders may be too late. Get our Berry Book, a valuable Fruit Growers' Guide. Save a day. Write tonight. O. A. D. BALDWIN, R. R. 14 Bridgman, Mich.

Success with Strawberries

Largely depends upon the supply of animal fertilizers in the soil. No one is more favorably situated for growing large crops of the finest berries than the poultryman. Poultry and small fruits go well together. You need more money than eggs or broilers will bring in. Nothing will turn your fertilizer and labor into dollars as readily as strawberries and other small fruits. Select an acre or so of good land, fertilize it with the poultry manure, set it to strawberries. You will be surprised at the yields you will get. You can sell them to your neighbors and the town folks at good prices. See how readily you get the \$500 to \$1,000 from a small plot of ground.

Our business is to show you how to do it and sell you the plants. Send 50 cents for our 112 page book, "Farmer on the Strawberry," which amount may be deducted from your first order of \$10 or more. Write today for our beautifully illustrated 43 page catalogue and let us talk it over these long wintry evenings. The catalogue is free. Address

S. C. RHODE ISLAND RED COCKERELS

A lot of good dark red cockerels for sale. All of them grandsons of males that won first prize at Madison Square Garden. Every bird a pure OWEN Farms strain. Cockerels at \$5.00 and \$10.00 each. Our mating list now ready. Aug. D. Arnold, Box 777, Dillsburg, Pa.

SILVER CAMPINES

GREEN SHEEN
STRAIN

I have the largest plant devoted to the raising of exhibition and high record Silver Campines in the United States. My birds have been linebred on my farm over a series of years, housed in open front houses, and are fully acclimated, hardy and vigorous. I have had 69 males placed under ribbons at the Coliseum Show in last ten years. During the same period, I have had 160 females placed under ribbons. This record is without equal in the history of the great Chicago show. It is a part of Campine history.

Write me for information. Your absolute satisfaction is guaranteed.

Again Champions at the Great
Chicago Coliseum Show
Dec. 6 to 11, 1921, where I won

Cock	Hens	Cockerels	Pullets	Old Pen	Young Pen
3	2	2	3	1	1

My birds were the admiration of many judges and breeders, and were recognized as superior to all former exhibits. This is the tenth consecutive time that my birds have been the champions of the great Chicago show. Breeding pens now mated. Mating list ready for mailing. My birds are single mated and exhibition birds are mated together. No trick back of these birds.

Campines are fast growers, plump at all ages, heavy layers of large, white shelled eggs and eat less than Leghorns.

DR. B. H. MANSEL Box 202 QUAKERTOWN, PENNA.

Will you please give me your opinion of Placer County, California, particularly around Auburn and Penryn, as a location for a fruit and poultry farm. H. Nelson.

Iowa.

The county you name is a favorable location for fruit and poultry.

* * *

I want to engage in fruit growing. Am undecided between apple orchard near Georgetown, Delaware, and Glade City, Florida. What do you advise? Harry Kretchner.

Iowa.

I advise you to first make up your mind what kind of fruit you wish to produce. I think Delaware today affords great advantages for the man who wishes to produce early apples. I think it the best location for early apple production in all the United States. You can raise every sub-tropical fruit in Florida.

Early Molting Orpingtons.

The discarding of early molters as breeders will spell ruin if practiced by Buff Orpington breeders. For a number of years we have been told by the professors of our agricultural colleges that the early molters should be discarded from the flock, but in each case you will find that they were Leghorn faddists.

If one of our laying Buff Orpington hens should become broody in June and be allowed to set and rear a brood it is practically a sure thing that she will have a nice new coat of feathers before October and yet she may have been broody just once during the year. She will have a much better chance to produce that wonderful layer than if she had been broken up in June and forced or allowed to lay all summer, then too, I have had hens who have not stopped to molt but have gradually grown new feathers while producing eggs regularly. This shows unusual stamina and ability to perform.

When we take these two conditions into consideration it can be readily seen that the discarding of the hen who has new feathers in October would be a great mistake if practiced by Buff Orpington breeders. It is a matter of official record that my Lady Egg-a-Day gradually grew a new coat of feathers while making her marvelous world's record, laying 343 eggs in 365 days, ending October 31, 1921. She laid on the way home from the contest and laid the next day, but I kept changing her around until I slowed her down. There was a great satisfaction in knowing she had grown her new feathers and would not be thrown into a heavy, severe jolt.

There is so much dependent upon the strain of birds that one breeds that after you have the strain of the breed you like then look for early layers, and if your pullets hatched in April do not lay before October 15, then there is something wrong either with your strain or with your method of growing and developing your young stock. If you can get your pullets to lay at 6 months of age without forcing and can cut the broodiness down in your flock to where an individual is broody not more than twice in one year then you are in line for eggs that spell profit. It is an easy matter to identify the pullet that lays at five to six months of age and it is equally easy to know the number of times a female has been broody by putting a celluloid band on her leg each time you break her up from broodiness or each time you set her on eggs. I. Brooks Clarke.

"950" CHICK RAISER Trade Mark IT'S BAKED AND MEDICATED

Would you feed a new born calf hay and ear corn, or a day old pig, corn? Then why feed baby chicks raw chick feed, and expect to raise a large per cent of them. It can't be done. Thousands of chicks die annually because of feeding raw chick feed, causing indigestion, and then diarrhea.

"950" CHICK RAISER, is a scientific discovery of the H. M. SPAHR BREEDING ESTATE. For years we made the fatal mistake of feeding raw indigestible feed and killed thousands of our valuable chicks. For several years since feeding "950" CHICK RAISER, which is baked and medicated, our mortality loss has averaged 5 per cent. Nine hundred and fifty raised out of a thousand. "950" CHICK RAISER, is a baby chick feed that is easily digested and will "SAVE THE BABY CHICKS." Stop losing baby chicks, feed "950" CHICK RAISER. ORDER TODAY.. SPECIAL INTRODUCTORY PRICE.

1 large size can "950" CHICK RAISER,	.75 postpaid
2 large size cans "950" CHICK RAISER,	\$1.25 postpaid
4 large size cans "950" CHICK RAISER,	\$2.25 postpaid
6 large size cans "950" CHICK RAISER,	\$3.00 postpaid

Money back, if it fails to raise a higher per cent of chicks than any other chick feed on the market. Our formula for baby chick scratch feed, easily made at home, and our entire system for successfully raising baby chicks given absolutely FREE with every order for "950" CHICK RAISER. ORDER TODAY, and "SAVE THE BABY CHICKS."

C. Sydney Cook, Jr., 71 Valentine St., West Newton, Mass.

An Interesting Discovery

Did you ever consider why 62% is a good average hatch with an incubator while hens will hatch 90 to 96% out of every hundred fertile eggs? May be you have been blaming your incubator. But why haven't you had bigger and better hatches? Most modern incubators have been highly perfected. They control temperature, moisture, ventilation, turning and cooling better than can be done by the hen, herself. And yet, in spite of this accurate control, incubators hatch an average of but 62% while hens get 90% or more. Poultrymen have long known that some secret of Nature remained to be discovered.

After many years of experimenting this closely guarded secret of Mother Nature has been discovered. There is nothing in any incubator corresponding to the beating of the hen's heart as she broods her eggs! Heat control, moisture and ventilation have been made well-nigh perfect, but the incubator chamber is as still as death.

Everyone knows something of the power of vibration. Troops crossing a bridge always break step lest the mighty rhythm imparted to the great structure actually destroy it. The sounding board of a piano vibrates in unison with the strings, thereby multiplying many times the volume of sound.

In the same way the ceaseless beat of the hen's heart causes similar pulsations in the eggs. As a result, the heart of the embryo chick beats stronger, better nourishes the forming parts, and thus makes a bigger, healthier, more vigorous chick. Moreover, incubator users know that there is no difficulty in developing the germ of life into a fully matured chick. The real difficulty is in getting the chick out of the shell.

It is a fact that light taps will so weaken a surface that breakage much more easily occurs. The gentle throb of the hen's heart against the shell does just that, and makes it easier for the peep to find its way to the outer world.

The knowledge and observation of these facts lead logically to the invention of the "PULS-HART—The Heart of the Incubator." It may be readily installed in any incubator and transmits, first to the tray, and through the tray to the eggs, pulsations exactly corresponding to the beating of the hen's heart.

With the PULS-HART on your present incubator you will hatch as large a percentage of fertile eggs as with hen-hatching, and as vigorous chicks. Perhaps you have a discarded incubator in the cellar or attic which needs only the PULS-HART to become a most satisfactory hatching machine.

The hatching season is upon us. Make this the most successful one you ever had. The cost of this little device, ready for use, is only \$4.85, sent parcel post insured. Send money order to the Puls-Hart Company, Dept. 5, 44 Whitehall Street, New York City, and they will promptly mail you a PULS-HART postpaid. Order today. The extra chicks from your first hatch will more than repay you.—Advertisement.

First, Get the Birds to Feed.

I want to call your attention to an article in your journal recently which I saw copied in the Sunday issue of the St. Louis Globe Democrat of December 25, in which the writer was harping on dry mash feeding for fowls. He said it was conceded by many poultryman that one could get more eggs by feeding a moist mash, but that it was impossible for a man to feed a moist mash to several hundred hens—simply could not be done.

I never feed a dry mash. I make fire wood of all dry mash hoppers wherever I go to work. I then make some troughs and feed a moist mash, and I feed it to flocks of 500 to 800 birds that are together in one house. You should see the difference in the yield of eggs. I have \$100 that I will donate to charity if I cannot get more eggs from a lot of hens I feed on moist mash than any man living can get from the same number of hens fed on dry mash.

Any White Leghorn commercial Poultry egg farm can be made to go if built properly and managed right. But it has got to be built so thousands of good chicks can be raised each year. No plant can be made to live long unless the chicks can be raised. That is the foundation on which the business must be built. Most all the writings you read these days are on "feeding for eggs." It makes no difference how well you know how to feed for eggs, if you have not got the hens to feed. This brooding business and rearing good pullets from the chicks are where nine-tenths of all poultrymen fall down.

G. E. Stillwagon.

Mo.

Speckled Sussex and Double Mating.

"Speckled Sussex are entirely different and much prettier than I had supposed." This is a remark heard at a recent poultry show after a gentleman had seen a display of this breed that had been bred according to Standard requirements.

Many people have an entirely wrong impression of the Speckled Sussex, believing that it is impossible to breed a satisfactory number of good specimens in a season. This is a mistaken idea. It might seem strange but it is a fact that the Speckled Sussex will produce as many good saleable exhibition birds as any of the other parti-colored varieties.

Speckled Sussex can be bred to Standard with one mating and the variety does not require double mating to obtain Standard males and Standard females. I have always been opposed to double mating in any variety. It should not be necessary, and if the Standard description does not make it possible to breed males and females from one mating then the Standard is not only artificial but inimical to the interests of the variety.

The double mating system in any variety should not be tolerated and it is up to the revision committee to so word the Standard on all varieties so this is not necessary. Speckled Sussex can be bred with a single mating and that is one of the reasons why this variety is so rapidly coming to the front.

There is still one change that can be made in the Standard that would benefit this variety, and that is to allow a little more white in the tails and wings of the

Science Discovers Greatest Lice Killer

Changes Old Methods. No Dusting or Spraying. Birds Delouse Themselves. Gives Lasting Relief.

A recent discovery promises to revolutionize all the methods accepted up to now for keeping poultry free from lice and mites. This wonderful lice killer keeps the birds always lice free without the poultry raiser doing any work. It is the simplest, easiest, surest and best method ever discovered.

Credit for this marvelous discovery goes to Chas. M. Hick, a Chicago chemist. Mr. Hick is already favorably known to the poultry world as the inventor of the famous Hick's Egg-Lay Tablets that make the hens lay.

Hick's Licekill which is the name of this sensational lice killer is a liquid that is added to the drinking water (or the feed can be soaked in a solution of it). The medicine taken into the system of the bird comes out through the pores and every louse or mite dies or leaves the body. It does not injure the flavor of the eggs or meat and is harmless. A few days treatment at the start and then a little in the drinking water one or two days a month.

So confident is Mr. Hick that this wonderful liquid will rid your flock of every louse or mite that he is offering every reader of this paper the opportunity of trying it out without any risk. Send no money, just your name and address to Chas. M. Hick & Co., 1018 So. Wabash Ave., Dept. 211, Chicago, Ill., and a full size \$1.00 bottle of this supreme lice remover will be sent you. Furthermore, as an exceptional offer, Mr. Hick will send you, at no additional cost, a regular \$1.00 box of Hick's Egg-Lay Tablets used by thousands of poultry men. On delivery deposit with the postman \$1.00 and postage. If after a two weeks trial you are not absolutely satisfied, write Mr. Hick and your money will be immediately refunded.

Jackson Specialty Co., 3324 Fifth Ave., Dept. 42 Chicago

males. It is absolutely necessary to have a liberal amount of white in these two sections to produce the beautiful speckling in the females. If the revision committee will take this little advice it will be appreciated by the breeders of the variety.

The Speckled Sussex when bred right, that is to say, when the males and the females are uniform in ground color, which is a rich mahogany color, there is nothing more attractive in the yard or in the show room. The breast of the male should correspond with the breast and back and saddle and there is no reason why such a mating should not produce equally good males and females.

In addition to the attractive color scheme, the egg production and meat market qualifications of this variety should appeal to every fancier who desires something that will attract attention in the show, produce a large amount of eggs at all seasons and give him the best of fowl for table purposes.

Wise. E. H. Hoffman.

Success With Partridge Wyandottes.

I am a breeder of Partridge Wyandottes, and think they are as good a breed as is possible in an all around chicken. For eggs and beauty, they cannot be beat. I find most any breed of poultry is a paying proposition if handled right.

Every fellow for his breed. Of course, I am speaking of pure-bred poultry, not scrubs, as there is not much money in the scrub.

Too many people have the idea, that all that is necessary is a big feed of corn and the pen will do the rest. Well, rest is about all they will do.

First, hatch my chicks as early as possible, that is, as early as I can take care of them. I prefer to hatch in the months of March and April, and if taken care of the right way, I have them laying before cold weather sets in the next fall.

Do not buy a cheap incubator and expect good, strong, healthy chicks, or you will be disappointed. Get a good one to start with or use old mother hen as she cannot be beat. After your hatch comes off, then look out, or your trouble will start, unless you know how to start the chicks.

I do not feed until they are at least forty-eight hours old. I feed only oat meal for the first few days, then a good chick feed and still feed a little oat meal along with a little charcoal and grit of some kind and give them plenty of fresh water at all times.

Get them on the ground as soon as possible and they will do better. After they get big enough to eat a little larger sized feed, I feed plenty of wheat, as I think wheat is as good a feed as you can get for poultry. I also feed a good grade of growing mash after the first ten days. Keep it before them at all times. One main thing is a clean coop and runway, as a chicken will not grow in filth.

I have pullets laying at five months old and wanting to set at seven months. After you have raised your flock up and ready for winter, first place them in a good house. Do not crowd them. Keep the house clean and admit plenty of fresh air and sunshine. Give them a scratch room. Keep plenty of good,

Dr. LeGear Says:—

One egg in winter is worth two in summer.

The hen that pays is the hen that lays IN WINTER. In winter a hen consumes most of her energy to keep herself alive and warm. She hasn't enough of it left to lay eggs. She needs help.

Dr. LeGear's Poultry Prescription

counteracts winter conditions by supplying the energy needed. It is a tonic, appetizer and regulator which helps hens lay, aids digestion and assimilation, tones up the system, wards off disease and keeps the whole flock healthy and vigorous.

Get it from your dealer today and start now—right now—to get winter eggs. Satisfaction or money back.

25c-50c-\$1.00 pkgs., 25-lb. pails, \$2.50, except Rocky Mountain States and West.

Not A Poison**

Marvelous French Discovery

Rats are your enemies. They destroy your buildings, eat your grain, kill your poultry, start fires and spread disease in every community. You need no longer suffer these losses—You can now in a week's time, easily kill every rat, mouse or gopher with Rat Virus, the great French discovery. Our triple strength virus is the most powerful concentrated deadly virus known, the only sure, safe rodent destroyer.

Triple Strength Virus is absolutely safe to use anywhere—positively not a poison. No danger to chickens, horses, cattle, hogs or dogs. Harmless to children or grown persons. Affects only rodents.

Triple Strength Virus is prepared in a laboratory licensed and inspected by the U. S. Dept. of Agriculture. Triple Strength Virus is tested on rats, mice and gophers in this laboratory before shipment—it cannot fail.

Rats Die Outside

Triple Strength Rat Virus is easy to use. Simple directions show how. A single rat eating the virus gets sick with a contagious plague disease that affects and kills all rats and mice in the immediate vicinity. Rats flee because they become infected with a plague that affects the heart, blood vessels, and lungs, destroying the blood corpuscles and causing suffocation. The rats rush outside where they get fresh air and water. When the diseased rats get outside, they never get back for the disease is then so far gone it kills them. No odor, no dead rats to handle, no live rats to kill.

Special Introductory Offer

We want to prove to you our claim that Triple Strength Rat Virus is the most potent, most powerful—yet non-poisonous and absolutely safe—rat virus on the market. It is a TRIPLE STRENGTH Virus. Contains more living rat virus germs than any other rat killer made and will go one-third to one-half farther. To introduce this powerful Triple Strength Rat Virus, we will make every reader of this paper—for a short time only—a special offer of a regular \$2.50 bottle for only \$1.00 postpaid. This \$2.50 bottle Triple Strength Rat Virus is enough to clear a big poultry house, barn or yard of rats and mice.

Money Back Guarantee

Your money back if it fails. Take no chances this year with traps or rat poisons. Only Triple Strength Rat Virus will positively kill rats, mice and gophers and be absolutely safe and sure. Give it according to directions—if after 30 days' trial you find any rats or mice—we will refund your money without question. Send \$1 bill today sure.

If not convenient to send \$1 today—just send your name and address, a postal will do—pay postman \$1 and a few cents postage on arrival for regular \$2.50 bottle. Remember it costs you nothing if it does not do all we claim.

clean straw in it and feed their grain in the straw, making them work for their feed as exercise is what they need. Keep a good laying mash before them at all times and plenty of water, grit and charcoal; and feed green feed of some kind. Too many people think, all they need is corn. Corn is all right, if fed right. I feed corn once a day and prefer it for the evening, as it helps to keep them warm in the cold winter nights.

Chicken House Styles Change.

By T. S. Townsley

Styles in poultry houses may not change as frequently as do styles in women's clothes, but anyone who believes that poultry-keeping methods are standardized and that no developments are taking place, has only to observe the different types of poultry houses found on farms throughout the country to be convinced of the fact that styles change with regard to chicken houses.

The houses of oldest type now commonly found, representing the ideas of style which prevailed 30 years ago, show a narrow, shed-roofed building with comparatively little arrangement for light and with less attention to ventilation. The common notion at that period appears to have been that the primary consideration in winter was to keep the hens warm, and the houses were built tight with the object in view of protecting the hens from the outside temperature and conserving the heat inside the building. A few houses yet remain that were actually plastered on the inside in an effort to keep the hens warm so the inmates would lay during the winter months, and occasionally a house is seen with the remnants of a chimney indicating that artificial heat was sometimes added to increase the temperature inside the building.

Some years later the open-front fashion began to gain favor among poultry keepers, but flock owners as a whole were not nearly so ready to accept this innovation as were the young women to bow to Dame Fashion's decree in adopting peek-a-boo waists. On many poultry plants a compromise was made with the open front style, by building a scratching shed on the front of the house which provided the open air features during the day, while the dark, tightly closed roosting quarters were continued. Many of these buildings are still in use. Probably as a consequence of the open-front agitation, with the subsequent development of the scratching shed idea, the half monitor type of house came into more or less popular favor, with windows in the high gable front to throw sunlight on the roosts, while the low open-front provided the fresh air desired by the open-air enthusiasts. Many of these poultry houses are found, and in some sections this type of house is the prevailing favorite even at the present time.

A study of the various poultry house types indicates that a developing knowledge of the requirements for satisfactory housing conditions for laying stock have been of chief importance in producing the various changes. Thus the narrow, tightly closed house

DAY-OLD CHIX - DUX

Thomas A. Edison and Luther Burbanks are wizards in their particular lines. Whatever they produce or are the means of producing, the public accepts as being supreme in the matter of perfection.

To the same extent, Walter A. Hogan was a Poultry Wizard. His discovery of the means by which HEREDITY COULD BE CONTROLLED, revolutionized the Poultry Industry. We have used his method of SELECTIVE MATING for more than sixteen years; improving the efficiency of each succeeding generation; and the poultry public is fast admitting the supremacy of birds bred in this manner.

December 13, 1921.

W. R. Curtiss Co.,
Gentlemen: Please send prices on day-old chicks up to 4,000 for delivery this coming season. You will be interested to learn that pullets raised from the thousand chicks purchased of you last May the 25th are doing excellently, far better than I had hoped. Yours truly, Holland Poultry Farm.
St. Catharines, Ont.

CURTISS UT CLOVER

Equally effective as a stimulant for heavy egg production; increased fertility; strong healthy germs and the consequent production of young chix of exceptional vigor and vitality.

January 7th, 1922.

W. R. Curtiss Co.,
Dear Sirs: Received the Cut-Clover and thank you for prompt shipment. I am feeding it to a pen of Fisher's White Rock pullets that had just started to lay and will say that it certainly stimulates egg production all right. I feed it mixed in the dry mash and once daily in the wet mash. It is the best substitute for a hen's natural green food I have ever used and the birds like it. Will order another supply shortly. Yours very truly, F. A. Murphy,
Binghamton, N. Y.

gradually gave way to the scratching shed type, which lead to the development of the half monitor style, because investigations and practical experience proved that the poor ventilation provided in the tight walled house caused lack of thrift and poor health in the flock. The once popular, half-monitor style of house also has certain fundamental defects which have given rise to the development of a still more satisfactory housing plan. Chief among the defects of the half-monitor type is the unsatisfactory temperature condition. This house is unusually cold in winter, due to the large amount of waste space over the roosting quarters, and is exceedingly hot in summer on account of the large amount of glass and roof exposed to the direct rays of the sun.

With the introduction of dropping boards, so that a separate scratching shed was no longer needed, the style in poultry houses again turned to the shed type building, which is one of the simplest to build and has always been in more or less popular favor. The chief defect of the shed type house with open front ventilation has been that roofing problems make it impracticable to build the shed type house wide enough to provide satisfactory open front ventilation without bringing the birds into too close contact with outside temperatures. About ten years ago an innovation in shed type houses, which was designed to overcome the difficulties of open front ventilation in a building of this type, was introduced by the Missouri State Poultry Experiment Station in the form of their so-called "Fool-proof" front. In this house the ventilation was secured through a system of shutters which admitted air but kept out the storms and tended to a certain extent to protect the birds from intense cold. The "Fool-proof" front proved an immediately popular innovation in poultry house buildings, and has been very widely adopted, not only by poultry keepers in Missouri but in all parts of the United States. The theory upon which this type of ventilation was fostered was particularly appealing because it apparently provided the necessary fresh air without subjecting the birds to extreme cold or requiring the care of an attendant to adjust the ventilators in case of storm.

The chief defects of the "Fool-proof" type of house were that it did not provide sufficient light and that the shutter front interfered to a certain extent with the ventilation. A common complaint from owners of "Fool-proof" houses has been that they were inclined to be damp during the winter months and that birds were frequently subject to roup when roosting in them, indicating that the slat front ventilators do not work as well as the theory of their construction would lead one to expect.

The problem of keeping the roosting quarters away from the open front to prevent damage from extreme cold without interfering with the ventilation, which could not be well accomplished in the shed type house on account of the limitations in width due to roofing difficulties, lead to the development of the unequal span or Combination-roof type of house. In this style of building the usual plan

was to make the north slope of the roof the desired width for a convenient span, usually 10,12 or 14 feet, and then join this up at the gable with a south span which was approximately half as wide as the north span. In some cases, however, this arrangement was reversed with the long span being turned to the south and the short span to the north. This type of house has several advantages in economy of material, minimum amount of air space to warm, and pleasing architectural appearance. Yet it has never become exceedingly popular among poultry keepers, probably due to the difficulty of cutting the rafters for a roof of this type so that they will fit, as a carpenter of no mean ability is needed to figure out the angle where the rafters of these spans join.

The most recent distinct innovation in poultry house construction has been the introduction of the straw-loft type, gable-roof building designed and advocated by Professor H. L. Kempster of the Missouri Agricultural Experiment Station. This house as originally planned was built square and offered the advantages of admitting light from all sides and having the straw loft to keep the house warm in winter and cool in summer. This last feature has made this type of house particularly popular and has resulted in it being built in many parts of the county. A majority of the poultry houses being built in Missouri at the present time are of the straw-loft, gable-roof style and reports from other states indicate that the popularity of this house is gaining rapidly there. A recent announcement from the Agricultural Extension Service at Purdue University called particular attention to an all day poultry field meeting to be held on a farm where a straw loft poultry house is being built and also mentioned the fact that a revised housing bulletin being issued by the Purdue Poultry Department included plans for the straw loft house.

The original straw loft poultry house built by Professor H. L. Kempster on the grounds of the Missouri College of Agriculture was 20 feet square, but the present styles in houses of this type, unlike the styles in ladies skirts, show the tendency to be longer and wider. Many of the new houses being built 36 feet wide by 36 feet long and some are even as large as 50 feet wide and 60 feet long to accommodate 1,000 birds in one house. A feature of the large type gable roof houses which bids fair to make them increasingly popular is arrangement for feed storage in a part of the loft space and provision for mash hoppers to be arranged so that the feed can be shoveled directly from a mixing platform in the loft into the hoppers.

The material used in poultry house construction also shows evolution. Poultry houses built ten or twenty years ago are almost universally frame while at the present time a considerable proportion are being built of hollow tile or concrete. Probably the most substantial and satisfactory type of poultry house being built at the present time is the large size, gable-roofed houses with hollow tile walls and fire-proof asbestos roofing.

Time to Feed Heavily.

February is a month when all flocks should be fed heavily on well balanced rations to bring the hens into early spring production. By January 1st most of the pullets should have been mature and ready to lay and the late molting hens should have been through the molt so that if the hens are properly fed egg production ought to pick up rapidly during February and reach its maximum in March or April. The proper feeding schedule for the late winter months is to give the hens all the grain they will clean up about 4 o'clock in the afternoon and then keep the mash hopper constantly open throughout the day so that they will have a chance to eat large quantities of mash. If the birds are inclined to stand around idle during the day it is advisable to scatter a small amount of wheat, oats or kafir in the straw in the morning to keep them interested in scratching. In some cases it is also advisable to give a very light feed of grain at noon to stimulate activity. Care should be used, however, in the morning and noon feed to see that the hens are not given enough grain to satisfy their appetites so they will not consume large quantities of mash. A satisfactory mash for winter feeding can be mixed by each poultry keeper by purchasing 200 pounds of bran, 200 pounds of shorts, and 100 pounds of tankage or commercial meat scrap and mixing this all together. This quantity of mash material should last 100 hens about two months.—T. S. Townsley.

Poultry Tonic.

Have you ever been a tired business man? Is your work indoors in a stuffy office? Does your mind insist upon dwelling on business matters to the exclusion of everything else? Are you feeling just as well and bright and vigorous as you used to do before making a living in some big city which took up most of your time? In other words, do you need and require some relaxation which is not too strenuous but which will take your mind off business care?

If your answer be "Yes," Mr. Witness, try our Poultry Tonic—the breeding of fancy poultry.

It matters not whether you have a back lot or a big farm, so long as you can make room enough for a few birds of high quality. If you once take the plunge you will reap the reward. An ancient and oft-repeated idea was that the requisites for starting a flock of prize winners were thirteen eggs from a reliable breeder. The prescription was to set these eggs under a hen and there would break forth thirteen prize winners at the Garden. Let the man who believes this try the experiment and he will be convinced that there is an art in breeding fancy poultry that will interest the best brain and tax the intellect of the most intelligent man.

Sample the poultry tonic which is contained in the endeavor to produce a blue ribbon winner. If you are in earnest and have any love for living things the attempt will divert your mind, will relax your thought and will put new life and energy into your tired body. This sort of poultry tonic is guaranteed to make over the most weary business man in less than one year.—The Chicken Fancier.

❖ 1922 ❖

MADISON SQUARE GARDEN

Sheppard's "Famous" ANCONAS

The great national thrift bird—have just recorded their 15th consecutive victory at Madison Square Garden Show, where, on January 25th-29th, 1922, they won gloriously for H. Cecil Sheppard as follows:

ROSE COMB

Cock—1, 3, 5.
Hen—2, 3, 4, 5.
Cockerel—1, 2, 3.
Pullet—3, 4, 5.
Old Pen—1, 2.
Young Pen—1, 2.
Special for Best Display in Rose Combs.

SINGLE COMB

Cock—1, 2, 3, 5.
Hen—1, 2.
Cockerel—1, 2, 3, 4, 5.
Pullet—1, 2.
Old Pen—1, 2.
Young Pen—1, 2.
Special for Best Display in Single Combs.

The income from hens is not half what it should be, because there are so many poor layers in thousands of poultry houses. Concentrate on winners! Concentrate on Sheppard's "Famous" Anconas—that not only win the best prizes—but hold the world's egg-laying records for flock in the hands of amateurs and also record for single bird.

If you are wise you will use the Automatic Draft Regulator on your brooder stove—

A Sure Way to Bigger Profits.

The Automatic Draft Regulator is the tireless watcher over the draft of your brooder stove, allows just sufficient draft to keep your fire burning evenly and keeping the heat under the hover at just the right temperature, without the possibility of a "runaway" fire in a gale or of gas "backing up" during calm weather. Can be fitted on your smoke pipe in two minutes and will require no further attention. Full instructions sent with each Regulator. Read testimonial below, also recommended by the Editor of one of the leading Poultry Journals.

Aurora, New York.

Dear Sirs: We are pleased to advise that the Automatic Draft Regulator, manufactured by you, one of which we installed on each of the smoke pipes of all our coal-burning brooders the past season, proved to be all our claim for them. They are great coal savers, but that is the least important of their many good qualities. They tend to maintain a more even temperature in the brooder house through all weather conditions, by checking the excessive draft on the fire during strong winds, especially those from the South. Every coal burning brooder stove smoke pipe should be equipped with one of these devices. We wish you all the success that you deserve for placing this automatic draft regulator before the poultryman of the country, as it fills a long felt want.

America's Five Greatest Poultrymen Use the Chicago Brooder

Successful, money-making poultrymen use and recommend the Chicago Brooder. They must have results. They must raise all healthy chicks. They must have a brooder that gives no trouble, requires the least attention, costs the least to operate. That's why they use the Chicago Brooder.

Positive Automatic Control

The Chicago Brooder is positively automatic. Burns evenly. No wick, no smoke, no gas or dangerous vapors. No trouble, no adjustments necessary. Automatic oil control positively will not fail. Always a uniform heat. Safe and dependable day and night. Produces better and healthier chicks that develop into prolific winter layers. Take no chances—order a Chicago Brooder today on thirty days trial—our money-back guarantee protects you. It's the greatest brooder on the market today. It has stood every test and is guaranteed to give satisfaction or money refunded.

TEN REASONS WHY YOU SHOULD BUY THE CHICAGO BROODER

1. Automatic Regulator Endorsed by Leading Engineers.
2. Requires Absolutely No Attention.
3. One Filling Will Last from Ten to Twenty Days.
4. Finest American Standard Burners.
5. Produces Twice the Heat of Any Other Oil Brooder.
6. Tank Capacity 5 and 10 Gallons.
7. Better Quality of Material.
8. Has Every Brooding Perfection.
9. Lowest Possible Operating Cost.
10. Lowest Priced Brooder Today.

Big FREE Catalog RADFORD BARRED ROCKS
SHOWS BIGGER PROFIT - BETTER BIRDS

For eggs—for meat—for show qualities—Radford Barred Plymouth Rocks stand at the top. Radford Barred Rocks are bred for size, early maturity, vigor—combined with great merit as layers and show birds. Radford Barred Rocks won ten out of twelve Firsts competed for at the Milwaukee National November 1921, and all of our matings contain the same rich quality and blood lines. For the back lotter,—for the farmer—for the poultry man Radford Barred Rocks are the birds that satisfy.

Big New Illustrated Catalog Free

It tells all you want to know about Barred Rocks. How we mate to produce winners, all about double matings, history of breed, etc. It tells about Radford Farms. It gives full information about eggs for hatching—about our 100% fertility guarantee—about baby chicks—and all beautifully illustrated. Use coupon and send for your copy today.

COCHRANE CO-OPERATIVE POULTRY FARMS, 3148 Sutton Ave., Maplewood, Mo.

Kretsinger's Supreme S. C. Anconas

Win another big victory at Illinois State Show at Freeport, Ill. First cock, 1st cockerel, 2d, 3d, 4th, 5th hens, and 1st, 2d, 3d, 4th pullets. My 1st pullet was considered by the judge as a very fine bird. This victory on top of my heavy laying strain of Anconas makes one of the greatest developments of combined superior qualities in any one strain. Eggs and chicks at proper prices. Catalog free.

B. R. KRETSINGER

EGAN, ILLINOIS

Classified Advertisements

UNDER this heading ads will be inserted for fifteen cents per word each month for less than three months, or **thirty-six cents per word for three months.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of \$1.50 per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers, mention AMERICAN POULTRY JOURNAL. All copy for Classified Ads must reach us by the 17th of month preceding the date of issue. These Rates Void After May 20th, 1922.

Keeline White Leghorns

Kansas City and Omaha Winners 1921—Four of a possible six first prizes in a class of over 300 White Leghorns at Omaha Thanksgiving week was won by my birds. At Kansas City my first pen showed all the fancy qualities so much sought for and were judged by utility judging teams from six states as the most wonderful egg producers. 100 Great Utility Cockerels—Exhibition Bred—have been carefully selected and will be shipped on approval at \$10.00 each. Can furnish cocks, cockerels or fancy females fitted to show and win anywhere at \$25.00 for males and \$10 for females. Mated pens of 1 male and 4 females that will produce winners and layers. Special price this month only \$50. Hatching eggs from best matings, \$3.00, \$5.00 and \$10.00 per 15.

Nation-Wide Shortage Of Fruit Trees

The U. S. Census figures prove that the number of fruit trees (especially apple and peach) suffered a great decrease during the last 10 year period. Over a 50 per cent decrease in many states — like Missouri, Illinois, etc.

That means that the farmers and fruit growers of America must plant hundreds of thousands more fruit trees. The shrewd men are doing it. Our business in Fall, 1921, leaped far ahead of our highest expectations. Right now we're short on many of the popular varieties.

Not only our nurseries, but every nursery in America, is sure to sell every tree in stock. The wise man will **ORDER IMMEDIATELY!** That is the only way to insure that you will **GET** the trees you want to plant this Spring.

We are paying \$16,000.00 out of our pocket to give you this **WARNING.** We feel that we owe it to our millions of customers to frankly tell everyone that the men who delay their tree orders, won't get their trees this year. Profit by this information—**ACT AT ONCE.**

Plant the Trees that Bore Crops in 1921 Despite 3 Frosts and 2 Freezes

Stark's Golden Delicious apples were borne on trees in 30 different states in 1921. In most states the Spring of 1921 was the worst for fruit in the memory of the oldest inhabitants.

Stark's Golden Delicious

—Stark Delicious—Stark King David and a few others (all varieties recommended by us) bore in 1921. The famous 3-fruit-bud-blooming habit of Stark's Golden Delicious make it a frost dodger.

For instance, D. Armentrout, De Witt, Iowa, writes: "My 2-yr.-old Stark's Golden Delicious tree bore 13 apples, after going through the terrific freezes and frosts of

last May, which killed all my crop prospects on all my other fruit trees."

Write and get full facts regarding this remarkable apple. **Send Your Name and Address on the Coupon**—or a postcard—for **FREE** copy of our great, big 72-page "Prize Fruits" 4-color book.

Also ask for our **NEW, FREE 64-page STARK SEED CATALOG**—and our **FREE "Landscaping Plans" Book.**

30 Prizes Out of 30 Offered

Sweepstake Championship Male and Female and Every Special Prize—This is the crowning achievement of their unexampled record at New York for more than 30 victorious years. At the last five Garden Shows—1917, 1918, 1919, 1920, 1921—THE IMPERIAL "RINGLETS" won 27 First Prizes out of 27 offered.—Every Bird Bred on My Farm.

The competition at these shows was stronger in quality than at all the other shows of America combined—a fact that every breeder knows only too well.

Supreme at Madison Square Garden Is Supreme Everywhere

IMPERIAL "RINGLET" EGGS

During the past ten years the matings on my farm have done more to improve the Barred Rocks of America than all the other matings of the whole country combined.

You want eggs to produce the Silver Cup and Blue Ribbon winners for next season's shows. No other Barred Rock eggs have ever produced the extreme high quality birds as my Imperial "Ringlets." Hundreds of old customers order eggs every year—these eggs have brought them rich rewards in Silver Cups and First Prizes, and proved the foundation for many a money-making business.

My Imperial "Ringlet" eggs will place you in position to win at next season's shows. You may raise a single chick worth hundreds of dollars—hundreds of my customers have done this. **MY MATINGS ARE UNEQUALED IN AMERICA.** No such magnificent color and barring can be found on any living birds—as layers they stand pre-eminent.

My Eggs Are the Best Money Can Buy — They Produce First Prize Birds

Mr. E. B. Thompson, Amenia, New York.

Winchester, Indiana, January 3, 1922.

Dear Sir—I hatched 22 chicks out of the last "RINGLET" eggs you sent me and 12 chicks from the first eggs. I showed some of the older ones at our recent show and won First Prize on cockerel, First and Second on pullets, First on breeding pen and sweepstakes championship for the best male bird of any breed in the whole show.

Yours very truly,

W. O. HENDRICKSON.

Grand Exhibition and Breeding Birds for Sale of This Richest First Prize Sweepstakes New York Blood. Elegant Catalog Mailed Upon Request.

EGGS!

"Out of 15 Aristocrat Eggs at \$15 received from you last April I hatched ten chicks. At the largest state show of Michigan I entered nine of them and in a class of 58 Cockerels won 2nd, 3rd, 4th and 5th Cockerel, and in a class of 42 Pullets I won 1st, 2nd and 3rd Pullet," thus comes the glorious tidings from G. E. Severance, of Michigan, under date of February 3rd, 1922. (Experienced exhibitors will realize that these are some of the largest classes of Barred Rocks ever encountered in *any* showroom.) And then Mr. Severance continues: "One of these winning Aristocrat pullets *began laying at the age of 4 months, 12 days*. I sold two of the cockerels for \$65, keeping the two best ones. My birds won for me cash money \$54. Thus you see, Mr. Holtermann, these ten Aristocrats have already netted me \$119 cash, and I have the eight best birds still on hand. Of course I will want some more eggs, etc."

Did you ever hear of any single setting of eggs in Barred Rocks—or in any other kind of chickens—producing four winning cockerels in a class of 58, and also the four highest winning pullets in a class of 42? Think this over!

THE GREAT NATIONAL BARRED ROCK CLUB SHOW, (the greatest of all the great ones) Chicago Coliseum, Chicago National, the "Heart of America," N. Y. Palace, Guelph, New Orleans, The "Tri-State," Dallas, Cleveland, Detroit, St. Louis, Los Angeles, Brooklyn, San Francisco, Winnipeg, Pittsburgh, Minneapolis, Indianapolis, Boston, etc., etc—Yea, all States of the Union, all Countries of North America, all Continents of the World, HAIL THE ARISTOCRATS AS WINNERS.

Holtermann's Aristocrat

REMEMBER

Aristocrat Eggs are producing the real winners in thousands of the showrooms throughout the world.

It is to your interest to know that the very same male birds and females (**the same identical cock birds and hens**) which produced these great winners for **Mr. Severance**, which produced in fact the greatest of all Aristocrat prizewinners last season, are again mated up in my yards right now. Naturally they will produce such quality again for this season. These are **tested** breeders, breeding birds which have been tried out, proven and have made good. And my customers positively get eggs from **every female** in my matings. (Read this paragraph again.)

W. D. Holtermann, Fancier

EGGS!

"The Aristocrat Barred Rocks are supreme as showbirds in the biggest and best shows anywhere in the United States! This I will say as an exhibitor of Barred Rocks for the past thirty-three years."

The above is the direct and simple statement of A. C. Braunsdorf, State Director of the Kansas Poultry Federation. And then he continues in his letter of November 7th, 1921: "*They are not only the greatest showbirds but are also the best layers of any Barred Rocks that I have ever bred* and I have been breeding Barred Rocks for the past thirty-three years."

THERE IT IS AGAIN, that great, that incomparable combination of the Aristocrat Barred Rocks—

Great Showbirds—Great Layers—Great Market Fowls

The greatest Money Making combination that you can possibly get.

OUR BEAUTIFUL ARISTOCRAT SHOWBIRDS ARE WONDER LAYERS—361 eggs from molt to molt, 291 eggs in a calendar year, 285 eggs in 12 months, 284 eggs in 365 days, 262 eggs in 11 months, 250 eggs in 10 months, 260 eggs in 270 consecutive days—from individual Aristocrats—such ringing messages come from State after State, from Province after Province, from Country after Country—from "India's Coral Strand," as well as from "Greenland's Icy Mountains."

Barred Rock Eggs

The eggs from these Grand Producing Matings are \$15 per 15; \$25 per 30; \$40 per 50; \$75 per 100; \$300 per 500 and \$500 per 1000.

Do you know that birds valued at \$250 and \$500 each were produced last season out of these very same males and females? My customers get their eggs from just these producing mating. **Think it over!**

A REQUEST: Please have your order booked at once and give me as much time to fill it as you possibly can. The demand for Aristocrat eggs is so very great that I must kindly ask this of my friends. Telegraphed bookings direct from this ad, with \$5 as deposit, will be accepted.

Send for your **FREE COPY** of Aristocrat egg booklet and "**How to Make Money with Aristocrats.**" These contain overwhelming evidence and proofs.

Keeler's Wh. Wyandottes
"THE WORLD'S GREATEST STRAIN"

The Aristocrats of the White Wyandotte World

Persistent winners for over a quarter of a century at America's best shows. Persistent layers. Lay 200 to 288 eggs a year and begin to do it at six months of age or sooner. Quick maturity, heavy laying, and show room quality make KEELER'S WHITE WYANDOTTES IDEAL. They fill every requirement of the man or woman who desires to keep poultry for pleasure and profit.

Eggs for Hatching from 24 Superior Matings

Every mating headed by a Chicago winner or superior son of a Chicago winner. We are in a position to furnish you eggs from the 24 best matings of White Wyandottes for 1922. All of the most vigorous, heavy laying, quick maturing and finest show birds reared the past three years are in these matings. Our 1922 illustrated art catalogue of AMERICA'S FINEST WHITE WYANDOTTES, describing these matings is waiting for you, and your wisest act before buying stock or eggs is to send for this catalogue.

QUALITY EGGS—\$5.00 per 15; \$9.50 per 30; \$14.00 REXALL BRED-TO-LAY STOCK—\$8.00 per 15; per 50; \$25.00 per 100. \$15.00 per 30; \$22.50 per 50; \$40.00 per 100.

SPECIAL EXHIBITION MATINGS—\$10.00 and \$15.00 per 15 straight.

Choice fully developed cockerels from my Chicago winners, \$10.00, \$15.00, \$25.00, \$35.00 and \$50.00 each. Select carefully mated pens, male and four females, \$35.00, \$50.00, \$75.00 and \$100.00.

BYERS' ORPINGTONS

At Chicago Coliseum Past 38 Months

76 of my Orpingtons stood under First Prize Ribbons; 117 of my Orpingtons stood under other Ribbons; 193 of my Orpingtons stood under Ribbons; I won 13 out of a possible 16 Firsts on Pens; I have never lost but one Special for Best Display in Buffs, in Whites or in Blacks at this premier Exhibition—Chicago Coliseum, in past 38 Months.

If you would own this kind, buy into the Strain that produces them.

Spring Stock Prices

Highest possible outstanding quality (such as contained in my 'Champion Exhibition Matings') Males \$100 Each; Pens \$250, Matings of 8 Females and Male \$400.

Big, snappy Standard Breeding Cockerels \$7, \$10, \$15 and \$25.

Standard Breeding Pens \$50 and \$75.

Prompt Stock shipments.

EGGS

From Champion Exhibition Matings, \$15 per 15, \$28 per 30, \$45 per 50, \$85 per 100.

(If you are not satisfied next winter with your investment in these finest Champion Exhibition Mating Eggs, I will send you free a bird or birds of a value equal to your entire outlay for these eggs).

EGGS

From Special Matings of Champion Blood, \$5 per 15, \$9 per 30, \$14 per 50, \$25 per 100. My eggs are packed for carriage any distance without damage; they are shipped prepaid and all infertile eggs are replaced free. Mating Folder ready.

Own Byers Orpingtons yourself. Share their outstanding excellence with my thousands of other successful customers everywhere.

Here are samples of thousands of testimonials in my files:—

Dear Mr. Byers: California, Jan. 4, 1922.
Your Strain wins at Oakland State Show. Note this: Whites, 1st Cock, 1st and 3rd Hen, 1st and 5th Cockerel. Blacks, 1st and 2nd Cock, 1st 2nd, 3rd Hen, 1st, 2nd, 4th and 5th Cockerel, 1st, 2nd and 4th Pullet, 1st Yard. Great win.
Yours truly, J. E. S.

Dear Mr. Byers: Connecticut, Feb. 12, 1922.
I grew to maturity 7 Pullets and 4 Cockerels from the Champion Exhibition Mating Eggs bought from you last spring. With six of these birds I won last month at Madison Square Garden, New York, Third Young Pen and Fifth Cockerel.
Thankfully yours,
E. H. W.

Dear Sir: Georgia, Feb. 1, 1922.
This morning I have 12 fine chicks from the 15 Champion Exhibition Mating Buff Orpington Eggs. I am sure your perfect packing method is partially responsible for this splendid hatch.
Yours truly, J. R. B.

Dear Sir: Florida, Feb. 14, 1922.

At our recent 2,400 bird show I won, with birds hatched from your Champion Exhibition Mating Eggs, the following: Gold Medal, Silver Cup, Best Bird in Show, Four Firsts, Four Seconds, Three Thirds and One Fourth. This is truly remarkable and a revelation to exhibitors of all varieties.
Very truly yours, L. B. M.

Dear Byers: Illinois, Jan. 28, 1922.

Pullets arrived in fine shape and are laying splendidly. I want to take this opportunity to thank you for the way you have handled all my orders and for the wonderful value I have received. I am convinced absolutely that all you say in your literature is true and that your business is run on strictly square lines.

Respectfully yours,

J. C. B.

Costs Nothing to Try List all the objects you find in picture beginning with "S." You need not buy any Reefer's Yeast Tablets to win a prize. Open to everybody. Largest and nearest correct list wins first prize of \$50 even if you buy nothing. But look to right! See how you can win \$5000, \$2500, or one of the other 103 biggest cash prizes. \$50 or \$5000, which do you want? Start now. Contest is for the purpose of introducing the latest scientific aid to—

BEAUTY—Health—Vim—Vigor

The world has just waked up to Nature's own beauty and health secret. Vitamines, lacking in modern diet, help to produce sparkling eyes, a clear skin, the radiant charm of perfect health.

Reefer's Yeast Tablets

—embody all 3 necessary vitamins. Help to build up vitality, strength, endurance, induce youthful natural complexion. A food. Has all the elements your body needs to derive the proper nourishment from the food you eat. Send for some today.

E.J. Reefer

Dept. A6023
9th & Spruce Sts.
Philadelphia,
Pa.

**Observe
These
Rules:**

Copyright 1922,
by E. J. Reefer

1. The contest is open to every man, woman, girl or boy living in America, except employees or relatives of employees of E. J. Reefer, 9th and Spruce Sts.
2. You must use only one side of paper. You must number your list of objects in regular order—1, 2, 3, etc. Your full name and address must be written on each page in the upper right hand corner. Use a separate sheet for anything you may wish to write outside of your list of names and your name and address.
3. English words only will be accepted as they appear in the English dictionary. Obsolete words will not be counted. Both the singular and the plural of a word will not count; either one of them may be used.
4. Compounds or words which are made up of two or more complete English words cannot be used.
5. The same spelling of a word will be counted only once even though it is used for different articles or objects, or parts of them. Each article or object can be given only under one name.
6. Two or more people may co-operate in answering the puzzle. However only one prize will be given to any one household. No prizes will be awarded to more than one of any combination outside of the family where a number—two or more—have worked together.
7. If a contestant sends more than one list under the same name, an assumed name, or a pre-married name, then all lists of such contestant will be

Win the \$5000 Prize!

A one package order for Reefer's Yeast Tablets qualifies your list for first prize of \$500. A two package order qualifies you for \$1500. But if you have ordered five \$1.00 packages and your list is largest and nearest correct, you win \$5000. Study the Prize List.

105 Prizes

	If no Reefer's Yeast Tablets are ordered	If one \$1 pkg. Reefer's Yeast Tablets is ordered	If two \$1 pkgs. Reefer's Yeast Tablets are ordered	If five \$1 pkgs. Reefer's Yeast Tablets are ordered
1st prize	\$50	\$750	\$1500	\$5000
2nd prize	35	375	750	2500
3rd prize	25	200	400	1250
4th prize	25	125	250	600
5th prize	25	75	150	400
6th to 55th prizes, each	2	4	8	25
56th to 105th prizes, each	1	2	4	10

disqualified. If more than one list is sent by any group or by any members of the same group who have co-operated in the preparation of such lists, then all lists of such contestants will be disqualified.

8. All answers must be received through the mail by E. J. Reefer, 9th and Spruce Streets, Philadelphia, Pa., and must be post-marked by Post Office closing time, April 10th, 1922.

9. The first prize will be awarded for the answer containing the largest and most nearly correct list of the names of visible objects and articles beginning with "S" shown in the picture. No other consideration, such as neatness, style or handwriting will have any bearing in making the decision.

10. The full amount of any of the prizes will be awarded to each contestant in the event of ties.

11. The decision will be made by three judges entirely independent of and having no connection with E. J. Reefer. They will judge the answers submitted and award the prizes at the end of the contest. Participation in the contest carries with it the acceptance of the decision of the judges as final and conclusive.

12. All answers will receive full consideration whether or not "Reefer's Yeast Tablets" is purchased. At the close of the contest, when all lists have been graded, the names of the prize winners will be announced and the list of words will be sent upon request to any participant who sends us a stamped, addressed envelope.

MARCY FARMS, Box A, Matawan, New Jersey

KILL LICE THE BEST AND SURE WAY

Protect your fowls from the powerful and insidious lice and mites that suck the life-blood of your birds.

These parasites allowed to run rampant in a hen house will suck more blood, more vitality over night than fowls can replace by the assimilation of large quantities of food during the day—think this over.

Extra care must be taken that not only the birds are kept clean, but every crack and crevice as well.

Licecil

Kills Lice

No dusting—No dipping—No painting—Just hang up the bottle

—and in a few days your entire flock and hen house will be rid of every louse and mite. Licecil leaves the bottle in powerful evaporating vapors which descend in a misty form, penetrating feathers, cracks, and crevices everywhere. Lice and mites have no lungs. They breathe through the pores of the body. The vapors from Licecil will quickly kill them. They cannot stand the odor of Licecil, and its presence in your hen house will rid you of these pests.

How to Use Licecil

Simply put a few drops in the nest and on the roosts, hang the uncovered bottle in coop or hen house. The powerful evaporating vapors which leave the bottle descending in mist form penetrate cracks, crevices, everywhere. Lice, mites, chiggers, roaches, bed bugs, ants, etc., will be destroyed by Licecil vapors. Will not injure chicks.

GIVE IT A FAIR TRIAL

If you prefer to fight poultry pests in the old way—it is certainly your privilege to do so. But your own best interest, and the success others are having, will lead you to give Licecil a fair, honest trial at the earliest opportunity.

1 Bottle, \$1.00; 3 Bottles, \$2.50; 12 Bottles, \$9.00—All Postpaid.

The Schwalge Sectional Incubator

"Four In One" 800-Egg Section

**Price
NOW
\$138**

**Sold Direct--Maker to User
No Middlemen
No Agents**

Our FOUR IN ONE has gained a reputation as the most practical Incubator for any poultryman—large or small. It is a (BABY) MAMMOTH. Has FOUR independent egg chambers IN ONE and heated with one heater. A hatch can be taken off every week, if desired.

To this FOUR IN ONE additional sections can be added within a few minutes. Can be enlarged to 9,600 egg capacity. Will hatch duck and goose eggs as well as hen eggs. Shipped with legs removed and will easily go through 2-ft. door sideways.

43 Prize Winning Birds

at the recent Chicago Coliseum Poultry Show, had been hatched in SCHWALGE Incubators, proving that the leading poultrymen use the SCHWALGE.

Note these advantages: Each egg chamber is a separate unit, holding 200 eggs—in two egg trays for convenient handling. Trays may be arranged for PEDIGREE HATCHING, if desired. Any chamber not in use may be shut off by means of a stop-off damper, thus saving oil.

Pure Radiation Heat. The heat travels through 4-inch heating tubes, giving a large heating surface and causing a mild heat. Positively no bad air can enter the egg chamber through these tubes. Most Uniform Temperature. The heat to the differ-

ent chambers is controlled before it reaches the chamber (not afterward), which insures the most uniform temperature to all egg chambers. Efficient Ventilating System, independent of heating arrangement and easily regulated. Makes the chicks strong and healthy.

Moisture Generator for dry climates or high altitudes. Water is dropped on hot tube inside the chamber and evaporates.

High-Grade Construction. Sound lumber, 28-gauge, galvanized iron and a liberal amount of fire-proof asbestos is used in the construction of the Schwalge Machine. Packed well to hold the temperature very steady.

Low Price—SAVE 35%

Four single machines of other makes, giving the same capacity, will cost you from \$210 to \$240. Our "Four In One," giving the same capacity with many other advantages, sells for \$138, and gives you the best the market affords in incubators. Price now within the reach of even the smaller poultry raisers. Same quality, same superior efficiency, same big profit-making possibilities. We urge you to fill out coupon and mail at once for full particulars. It will pay you well.

9600-Egg Machine (12 "Four In One" Sections)

Wyckoff's S. C. White Leghorns

AMERICA'S BUSINESS HEN

Remember that we are the originators, and for over 40 years specialty breeders of the justly celebrated WYCKOFF STRAIN of S. C. White Leghorns, the most prolific strain of poultry in America today. Place your orders at headquarters and make no mistake.

SPECIAL ATTENTION is directed to the fact that, almost without exception, the most successful Leghorn egg farms in the country, and those making the highest records at the greatest laying competitions in the world have been proven to be of Wyckoff foundation.

EGGS FOR HATCHING

from the most carefully selected matings. Our breeding matings for 1922 are made up with the most exceptional lot of carefully selected stock in the country, barring none. Every egg furnished will be from a grand lot of special selected birds, representing our highest quality stock in every particular. For size, strength, vigor and laying qualities, together with the true Leghorn type, they are unequalled. **POSITIVELY NO SECOND GRADE OR IMMATURE BIRDS MATED, AND NO ORDERS FILLED WITH EGGS FROM "FARMED-OUT" STOCK OR OTHER BOUGHT UP JUNK. WE ARE BREEDERS, NOT HUCKSTERS.** Place your order for some of the eggs from this famous high grade stock, and get in line with the most profitable era ever known in the poultry business. Send for free catalog giving prices and descriptions, with numerous photographic illustrations showing type of the birds and sections of this most completely equipped plant.

C. H. WYCKOFF & SON, Aurora, Cayuga County, New York

Your old incubator deserves this thermometer

Not just a thermometer but the incubator thermometer which is preferred by the most successful chick producers. That's the time tested

Tycos Incubator Thermometer

Get the old machine out now—clean it, disinfect it—see that it's in good working order long before it's time to set the eggs. It deserves a fair chance to do good work for you.

It will hold the temperature where you set it, but you must set it right to get the big hatches. If your thermometer is inaccurate and registers 103° when the heat is 101° or 105° (as thousands do) you won't get the big hatches or good chicks.

But the *Tycos* tells the truth. It keeps you and the machine right. Made by instrument experts with extreme care, tested and retested, and adopted by leading incubator companies and poultrymen as the standard. Ask your dealer or send to us direct. Price 90c and 5c postage for No. 5774, style shown.

You'll be interested in "Thermometer Facts"—sent FREE on request. Write for it.

Taylor Instrument Companies
Rochester, N. Y.

There's a *Tycos* or Taylor Temperature Instrument for every Purpose.

Feeding Little Chicks the Jamesway

Jamesway Poultry Book

A mine of interesting and valuable information about the new Jamesway type of poultry house; Jamesway ventilation; and Jamesway money makers for poultry raisers, such as dry mash feeders, waterers, metal nests, grain sprouters, etc.

The Jamesway is solving the worst problems in chicken raising and bids fair to revolutionize the poultry industry in many sections of the country.

It saves great amounts of expensive feeds that are now being wasted; increases the egg yield and makes handling the poultry easy, pleasant and profitable.

And the cost of the Jamesway is surprisingly small.

Why not write us now about your poultry problems; say how many hens you keep and what kind; what sort of chicken house you have and what troubles, if any, you have with it, such as too much moisture, foul air or the like. Perhaps we can offer helpful suggestions.

The first weeks are the critical weeks—give your chicks the right start in life!

Upon the growth and vitality your chicks develop in these first weeks depends largely what they will do for you next winter.

The Jamesway little chick hopper keeps the chicks' feed clean and sweet—and you know that cleanliness is the best preventive of white diarrhoea.

It provides an abundance of feed all the time—insures against hungry chicks. And it prevents waste of feed!

Chicks can't get in and scratch around the feed and waste it. Feed saver pan below catches all feed thrown out; feeder lifts out; roof can be tilted up and back and feed saver pan emptied back into the hopper.

The feed saved will go far toward paying for this feeder in one season.

36 in. long; 18 in. high; 18 in. wide; holds $\frac{7}{8}$ bushel of mash, accommodating 100 to 200 chicks. Wood base furnished with feeder without extra cost. Built to last a lifetime.

If there is no dealer in your town handling Jamesway poultry equipment, write for price.

Jamesway Poultry Book No. 1, giving details of other items of Jamesway equipment for the poultry house sent upon request.

Owen Farms MATING LIST for 1922 IS READY My Pre-eminent Matings of S.C.R.I. Reds and Buff Orpingtons

are far and away the best I have ever made. Each mating is carefully described and priced in this complete 80 page list. You can visualize the matings, almost as well as if you were here, by reading the careful word pictures or descriptions. Write and ask for your copy, if it has not already reached you. No breeder of Reds or Buffs is so strong that one or more settings from Owen Farms' superb matings will not better his or her flock in one or more sections.

Owen Farms' Reds

Are better than any other strain in—

*Average type
Perfection of head points
Bone, size and vigor
Soundness of fiery red undercolor
Laying qualities*

Are equal to any other strain in—

*Richness of natural color
Evenness of natural color
Black markings in wing and tail
Richness of natural breast and fluff
Richness of solid clean hackles*

What Else Do You Need for Your Reds?

Owen Farms' Buffs

Are better than any other strain in—

*Bone, size and vigor
Perfection of head points
Smoothness of surface color
Soundness of undercolor
Laying qualities*

Are equal to any other strain in—

Genuine Orpington type.

What Else Do You Need for Your Buffs?

My Reds and Buffs

have made crashing victories at Madison Square Garden, Boston, Chicago, Syracuse and other leading shows. Mating list tells the story. You should read it before you place your egg order for 1922.

No. 3

FOOD VALUES FOR GROWING CHICKS

THE writer recently attended a meeting of local poultrymen and the topic for discussion was the care of growing chicks. It developed into sort of experience meeting and each member told in turn how he raised his fowls. One said he raised his chicks like mother did by feeding corn meal and water, and boasted that he succeeded in keeping most of them alive. He claimed merit for this diet because his chicks did not die. Another said his chicks were permitted to run with the adult fowls and he thought they were "doing pretty well," which was evidence in support of his system of poultry husbandry. The writer tried to convince them that the test of a method was not simply how many lived but how well they grew and what kind of fowls they developed into. An inspection of the flocks of these men would probably have found the chicks composed largely of runts of various sizes, and perhaps many of them but partly covered with feathers. Chicks should be so kept that they develop uniformly. It should not be simply a survival of the fittest but each one should have a chance. Such cases of poultry keeping may to some of my readers seem rare ones and much out of the ordinary, but an inspection of the smaller flocks kept in the back yards will reveal that such cases are not uncommon.

Scientists have discovered that the three great vitamins or elements that sustain life are found in the leaf of the plant, the yolk of the egg and in milk. This being true we feed eggs, milk and vegetables to our children. To our chicks we cannot afford to long maintain a diet of eggs at sixty cents a dozen but we can feed plenty of green feed and keep milk before the chicks a good part of the time. Many of the best foods for chicks are the cheapest. The writer has had remarkable success in developing his White Leghorns into large husky fowls with luxuriant plumage, and attributes this success to the diet given the fowls. The best is none too good.

Starting the Baby Chicks

For starting baby chicks there is nothing quite as good as stale whole wheat bread moistened with sweet milk. Dry the bread, pulverize it and then moisten it with milk until it becomes crumbly. Do not make it sloppy. Feed five times a day on trays and after the birds have eaten all they want take the trays away until feeding time again. If you have a few well bred ones that you want to really grow, try this method. Those who have a large number must resort to

By W. H. WAGERS

Warmth and sleep are the first requirements of a little chick—
The first feed—How to feed to produce pure white plumage.

some of the commercial starting foods. They are very good.

After five or six days a mixture of fine grains should be added to the diet, and fed in clean litter to give the chicks exercise, at all times remembering that the best part of this scratch feed is the exercise the chicks get,

hence it should be fed sparingly. We feed but little grain to our growing fowls. A little green feed in the form of lettuce leaves, Swiss chard, fine cut clover or sprouted oats chopped fine should be introduced after a week or so and this green element in the diet should never be neglected until maturity. The more green feed you give your fowls, if it is the proper kind, the faster they will grow. Green food develops large healthy bodies and promotes feather growth. Fine cut lawn clippings are excellent.

In the fall, after the fowls are pretty well matured, we find it pays to feed plenty of cabbage, but lawn clippings, chard or lettuce is much better for the first three or four months. It takes three or four weeks to get a chick started right and during that time you should stick to the bread and milk diet. After that period you may use a good buttermilk mash and give the fowls plenty of sour milk to drink. If you want to rush them you may moisten the mash a little with the milk, but no matter how well they have been fed they will always be ready for some nice green food. Do not neglect it.

The writer always has a supply of green feed for his chicks if he has to mow all the lawns in his community. If the fowls have plenty of range where they have access to a patch of alfalfa or clover they will help themselves to the greens, but unless they have range of this kind it is best to assist them in finding some nice juicy greens. A good mash, plenty of milk and lots of green feed will insure large healthy fowls. This method will produce big husky males and females that lay plenty of large white eggs. You must not expect nice large eggs from small stunted females.

Influence of Feed on Color.

The writer is a firm believer in the food value of oats. We believe that oats are generally undervalued as a diet for chickens. After the youngsters are well started we feed no grains except a mixture of hulled oats, wheat and cracked white corn. Take no chances on yellow corn fed to white birds unless you are fattening them for the butcher. Yellow corn will make White Leghorns fat, their skin as yellow as gold and their plumage to match the skin. Of course considerable yellow corn may be fed with other grains without serious harm, but a diet of yellow

(Continued on page 372)

Starting the chicks. Rape is growing in the large yard in the rear to provide green food when the chicks are older. Morning dew on the heavy green stuff would result in wetting and chilling baby chicks, so they are first started in a nursery runway, and later turned onto fresh ground in the main yard.

Madison Square Garden's Premier Poultry Show

APPROXIMATELY twenty thousand people paid \$1.10, including war tax, to see the poultry show held in Madison Square Garden, New York City, January 25 to 29, inclusive. The show closed Sunday night, January 29. The attendance was running ahead of last year up until Saturday afternoon when a snow storm came up. Two ticket sellers had been kept busy behind their windows at the entrance to the Garden, and time and again there were lines of people before each window. Then nature laid a white blanket over the city, and the stream of people slowed down, with the result that the total admissions for the week were about 3,000 less than a year ago. The snow, however, gave work to 17,000 men in the metropolis, and cost the city \$1,000,000 to shovel it off the sidewalks and out of the streets.

Madison Square Garden Show, Inc., is a company that includes some men that would be pretty expensive to hire. But, they work with the greatest enthusiasm for the Garden poultry show. Harvey Wood has charge of the publicity. This year he invited the editors of the New York City papers to a banquet at the Waldorf-Astoria. Oscar, the most famous chef in the world, prepared the dinner. We understand that it costs \$500 for his services alone. Flowers and music and food probably amounted to \$250 more. Members of the Garden Poultry Show, Inc., attended the banquet, and the city editors learned that the premier show of America was being staged in their city. They took the hint and all through the week the New York daily papers, both morning and evening, were full of news about the poultry exhibition.

As a further instance of the way they put this great show "across" with the public: An actress playing at a theatre on Forty-fifth Street, near Broadway, has a home on Long Island, where she breeds poultry, and where she plans to spend all her time after she retires from her profession. The Garden show procured three boxes at this theatre one evening. Twelve or more prominent poultrymen were invited to step into taxicabs and go up to see the performance. They occupied the boxes. At the close of the performance, when the whole troupe was on the stage, just before the curtain was to be rung down for the last time, Professor F. H. Stoneburn came out from between the wings, and, standing in the center of the stage, he addressed the audience, saying: "It may interest you to know that for sixteen years one of those who has taken part in the performance this evening has been breeding poultry on her farm on Long Island. She has this year won a first prize at Madison Square Garden. Several prominent poultrymen from different states have attended the theatre tonight." Then turning to the lady on the stage, he added: "In behalf of the Garden management, I beg to present to you this bouquet of flowers." The audience applauded, and the next day the press agent of the Garden show had another big story for the daily papers.

By FRANK L. PLATT

New York City holds another wonderful poultry exhibition—Enormous crowds of people visit the show—E. B. Thompson does not exhibit—Awards and comment on the classes.

Winter. Breeders were showing pens for the honor of a Garden win. That is a good illustration of the wonderful prestige of a ribbon won at New York, of the tremendous importance of a Garden win. There was a total of 2966 birds in the single classes, and 331 pens, making a total of 4621 specimens of poultry in competition.

A Glimpse of the Garden.

The Garden looked newer this year. The old floor had been supplanted by a cement floor. The old dingy skylights in the roof had been cleaned, and clear top light came down on the birds in all parts of the hall. The Garden, however, is not big enough to single tier the birds, and the light in the under coops of the double tiers is not as good as in those show rooms where all the birds are penned on one level. Secretary Orr had part of the portable balconies left down, with the result that a number of seats at the end of the arena were available for guests who desired to sit down and rest. Altogether, with the chairs, and cement floor, and cement railing, and bright skylight, it looked a little like a new Garden. As one breeder put it, "A new Garden but the same old guard are here." We did not see the new faces that characterized the Boston show this year. The great amphitheatre was filled with the same old gladiators and war horses whose noses have been burned with powder in the past battles; and competition was the keenest of any show ever held in America.

Secretary Orr remarked that it was the smoothest running show that they had held, yet he said that it had been the hardest for him because of the insistent demands for concession space. The lower level is now used, and a number of booths were put up there. All waterfowl and turkeys were cooped on the lower level. The educational program under the auspices of the United States Department of Agriculture, co-operating with the State Agricultural Colleges of New York and New Jersey, was given downstairs. The crowds seemed to be as big downstairs as upstairs.

While all those who wanted space at the Garden could not be accommodated, a number of those who had displays reported splendid sales. One brooder manufacturer stated that he had sold about \$3,000 worth of hovers during the show. The poultry journals did a good business. American Poultry Journal's booth was at the foot of the main aisles, and Mr. Galligher, in charge, who is so well known to patrons of the Garden show, was busier than usual writing new subscriptions and renewing old ones.

Some Notable Exhibits.

A beautiful silver cup, known as the Crawford Memorial (Continued on page 374)

Peggy Wood, youngest exhibitor at the Garden Show, and her White Cochon.

Everything In Ship-Shape For Spring Work

AMONG the many requests for information I receive from poultry keepers, one of the most frequent requests is to tell just what I do in the early spring breeding season. First of all comes an unpleasant subject,—lice. In the majority of cases, telling a man his chickens are suffering from lice is just as likely to make him your enemy for life as it is to tell a woman her house has bed bugs in it—for both are offsprings of filth. A life-long friend of mine had me call at his plant to advise him what was wrong with his flock. He described the symptoms as almost total lack of eggs and droopy, sick looking chickens. One glance was enough to know it was lice, and lice alone, and I told him so. A more indignant man you never saw, and I was politely told that I knew as much about chickens as I did of Sanscript and that he cared for no further advice from me. Evidently after I had left, however, he examined his flock, for it was only a few days later that he came around asking my advice as to getting rid of those very lice he had so strenuously denied.

We all know a chicken must be contented before it will lay the maximum number of eggs. Now suppose that you, in your own person, was so covered with one kind of lice all day that caused a continual itching of the body all over, and with a swarm of another kind of lice all night that sucked your blood to such an extent as to seriously impair your vital forces, would you be contented? Hardly, and that is just how it is with a chicken.

When we consider the question of lice we must remember there are quite a number of kinds of lice. For the purposes of this article we will classify them into two kinds and call them the "day" louse and the "night" louse. This is, of course, not a correct description, for the day, or body louse, is with the chicken both day and night. But for the purpose desired, it answers very well and we will so describe it.

The day, or body, louse lives on the body of the chicken until the swarms become so great that they overflow into and all around the coop itself. It lives on the oils and the filth attached to the body and feathers of the chicken and the excretements of the flock. It causes continual itching to the body of the chicken and gives it no rest. If not controlled, the numbers become so great and the itching and annoyance so severe that the chickens will pluck out most of their own feathers in an attempt to get rid of the torture.

The so-called night louse is different. It spends only the night on the body of the chicken, filling up with a hearty meal of the chicken's blood which it obtains by puncturing the skin and sucking the blood, then retiring before morning to secluded places in the pen itself to rest until another night arrives for another meal.

So that we can readily see that if we want to kill the day louse we must attack it on the body of the chicken itself, while for the night louse we must begin the fight in the pen proper. Neither your pen nor your chickens should have either kind, for the prevalence of lice shows beyond the possibility of a doubt that you have been neglectful of your chicken plant and have not kept it thoroughly clean. And once lice are well established, it is some job to get rid of them. On the other hand, if once rid of the pests, just a little care will prevent them for all time. And you can get rid of them and you should.

"That does not interest me,—my chickens have no lice," I can almost hear many of the readers say in their own minds. Don't be too sure,—make sure. Pick up several of your chickens and examine them carefully along the back, under the wings and especially around the vent. Push back their feathers the wrong way. If you don't have good eyesight, put your glasses on. One must remember that a louse isn't the size of an elephant.

By **ALFRED B. GARNER**

Spade up the runs—Eggs from the good layers will hatch as well as those from the poorer layers —Get the incubator going—Lice.

If you see little seeming specks performing acrobatic stunts among the feathers, put it down as a sure thing that your chickens have body lice. Then when night comes, put blocks of wood around the floor or in the nests for several nights and have one end of the blocks resting on a piece of thin cardboard so the space is just enough for a louse to get under. In the morning put your glasses on again and examine the under side of the blocks. That will tell you whether or not you have the so-called night louse—the dangerous blood suckers. If you have either of them, get rid of them at once. It will not be an easy job if they are well established, but it can be done and you should do it. I will tell you how I advise my friends to do it.

First of all, for the night louse. Take out all the nests and clean them thoroughly. Take out all the roosts and every other movable article in the coop and clean them in the same manner. When the coop is bare, clean that and clean it thoroughly by scraping off every bit of adhering filth. If you don't want to do this thoroughly, don't begin it at all, for a half done job in this case is just labor wasted. It must be positively and absolutely clean. Then with a sprayer, if you have a sprayer, souse the coop well with one of the standard disinfectants and louse killers. If you have no sprayer, use a good wide paint or white-wash brush. And don't forget, you won't find these species of louse out in the parts of the coop that you can see, but in the dark cracks and crannies that you can't see. You can't go over that part of the coop open to your view and chop them up with a hatchet or hit them with a sledge hammer nor drown them in a flood of the spraying fluid, for they hide in the darkest and most inaccessible places they can find during the day and you must reach them there or all your work is of no avail.

If you have no standard disinfectant and louse killer, use plain every day coal oil. But either way, you must get into every crook and cranny and to its furthestmost end. Then do exactly the same things with the nests, roosts, and all the articles you have removed from the coop, before you put them back again. This should answer for the night louse for a time. But you have not yet possibly destroyed all their eggs, and in the course of from two to four weeks these eggs will have hatched and a new generation of the night louse have arisen. Then you must do the same thing over again. If you do this the second week after the first operation you will then have most likely destroyed the new generation before they have reached the age when they, too, will have laid eggs.

Once you have them cleaned out, a little care and absolute cleanliness and a succeeding cleaning as above every spring and fall should keep your plant free of the pest. Another thing I advise. After you have the plant absolutely free of the pest, buy yourself louse proof perch supports. These are manufactured as both wall brackets and as upright supports and cost from 65 cents to 75 cents a pair. These perch supports are made of cast iron. About midway in the length of the support is cast, as a part of the support, an iron cup. Slightly above the cup is a cover extending out beyond the width of the cup itself. Holes must be bored in the wooden perch or roost for this support. The support keeps the perch or roost from touching the coop proper. The cast iron cups are kept filled with coal oil, the cup above preventing dirt and dust from filling up the cup. The louse crawls from its hiding place in the coop up this perch support toward the roost, but never reaches the roost itself, for it cannot pass the coal oil filled cup as long as kept filled with the coal oil. It is a positive preventive of the blood sucking louse and a good investment.

Healthy Land Underlies Healthy Poultry

POULTRY raising is an industry. It has grown to such proportions that it is a very considerable part of our American agriculture. People demand eggs and poultry products as a necessary parts of their daily diets. The population continues to increase. The poultry industry must keep pace. In many sections of the country poultry farming has developed in a commercial form, and taken on the aspects of an intensive production. But wherever poultry is being kept the tendency seems to be to limit the acreage or area over which the chickens are ranged, and to confine the poultry manipulations to small plots of ground.

Poultry keeping lends itself to development in areas of limited extent. That has always been an advantage cited for poultry raising. Thousands of people are raising hens today because it is possible to do so on the small plot of land that is within their reach. And all this is true. The unit of production in poultry farming is small, then hen. She doesn't require very much room. But—this tendency, this practise, this method of using land thus intensively in the rearing of poultry and in the handling of it brings with it certain difficulties, certain hindrances, certain persistent problems that arise again and again.

The system is not necessarily wrong. Poultry will always be kept in rather intensive ways. However, if there is something that is bound to develop because of that intensive management it is well to think about it and plan accordingly. In this article the writer would call attention to some of the persistent problems that seem to him to be confronting poultry raisers in our country today. And the first such problem has to do with the land, meaning by this term, in broad sense, the environment over which fowls run.

If one takes the time to visit the poultry flocks in his vicinity he will find in the majority of cases that the fowls, both baby chicks, growing chicks, and adult birds, are being kept on the same area of ground, more or less exactly, year after year. Of course, this applies less truly on the general farm where the poultry flock is given free range at all times. But even in such cases very often the same ground is used as a result of stationary coops and runways for chicks. On many commercial poultry farms, and in many suburban poultry yards, little change of yards, rotation of crops, or changing of soil has been thought possible. The consequence has been that the poultry has been reared and kept on the same areas year after year. The time has come on many poultry establishments where the effects of this is being felt, and in many other instances the time is not far off. No system of poultry keeping can be permanent and continuously successful which does not take into due consideration the soil, the land. In poultry raising, as in practically all branches of agriculture, the soil stands out as the fundamental basis of operation, the foundation on which profitable production must be built.

What Is Happening to the Soil?

In the above paragraphs it has been emphasized that the area of the land devoted to the poultry flocks is a cause for consideration. Why is it? What is happening to the soil that is being used year after year for the chickens? If unnoticed, or not cared for, is its condition going to cause serious results or injury? It certainly is!

By **W. C. THOMPSON**

Fowls live on the ground—Dangers to health when the soil becomes contaminated—Nature demands a balance between plant and animal life.

For purpose of illustration, let us look at that peculiar family of soil bacteria which, in the presence of sulphur, water, etc., form acid. They thrive and continue to form acid until the surrounding environment reaches a point of something like five per cent acidity, after which time the bacteria cease their vigorous

development and growth and their increase is arrested by the acid which they have themselves been instrumental in forming. Then, the acidity reaches a point wherein further growth is well nigh impossible.

In our system of poultry keeping, we must avoid "reaching a point of acidity which will inhibit further growth." In other words, we must handle our flocks and particularly the soil, or land, devoted to chickens so as to avoid its reaching a condition wherein further successful poultry culture is impractical or impossible. It is not difficult to understand that the constant use of the land through several years might be dangerous. But, why is it? Is there some really serious way in which the much-used soil is becoming inhibitive to future successful poultry production?

From the writer's observation, there are certain concrete things happening to soils, or land, which has kept poultry in successive years. It should be thoroughly understood that what I am about to mention has been avoided by careful management in many instances, but not in all, unfortunately.

First, there are certain internal parasites that infest chickens, worms that gain entrance to the bodies of the birds, and live there and grow and deplete the vitality of the fowls, and finally ruin their health and strength. Some of these worms are the round worms of the intestine, probably several kinds. Others are tape worms. And there may be still other worms. In many rather widely distributed

A poultry house in Vineland, N. J. These Leghorn hens are ranged over a sandy soil that is regularly limed and plowed to keep down contamination. Clean, healthy soil is essential to continued profits with poultry.

poultry raising sections in New Jersey and elsewhere, with which the writer is familiar, these worm infestations have developed during the past two years to scourges that have taken their toll in hundreds of flocks, and destroyed profits to the extent of many thousands of dollars. Our most complete knowledge of these worms is, at best, scant and our methods of attack and control are as yet quite incomplete and probably inadequate. From the meager knowledge that we have, however, certain signs command our attention.

In the case of the round worms it is probably true that the eggs of these worms are given off in immense numbers with the droppings of infested birds. These pollute surface soil, and are taken in, finally, by other birds, with food materials. Ranges, where young chicks are being fed for growth and development, become polluted with the eggs of these worms. Runs where adult fowls range become likewise polluted. When once the worms get onto the place they seem to spread quickly to all soils over which the poultry ranges, either young or old. In the case of the tape worms intermediate hosts, such as earth worms, flies, and many insects, aid in spreading the infestation. The fowls take in the eggs. They are incubated in the digestive tracts of the fowls and finally hatch. This process takes many days, probably something like thirty or forty, and then another series of days must elapse while the worms develop. Therefore, it may be a considerable time after the eggs have been swallowed before the actual effects of the

(Continued on page 361)

The Little Chicks Need Care and Protection

MANY of us can remember the old-time chick-raising contest. It was staged on the home grounds. Representing our side was mother. Father sometimes served as chairman of the advisory board. There was a mother hen of just any variety of no breed at all and her brood. Last and least was a peek-a-boo arrangement of slats, strips and staves, termed "coop"—survivor of former struggles.

The other contestant was the Champion Nature, assisted by the rat, the hawk, and their subterranean and aerial kind.

Perhaps the Champion Nature would hand out a sudden shower and one or more chicks would go down for the third time unless

This frequently occurred in the old days.

mother got there promptly with an old carpet to shove the brood to safety and to envelope the coop.

Now we see why that style of coop was used. It was to make the contest more spirited—more exciting.

The champion had many tricks up-sleeve. Sometimes mother would win a trick; sometimes one more chick would be missing.

If Nature was generous mother was allowed to win through to goal with several of her fowls which in course of time became layers and non-layers in accordance with certain laws of sex and of fecundity.

The "winter eggs" were laid in the fall of the following year and put down in a jar of salt for the winter fries and scrambles.

Now-a-days chicks are being raised less and less as "Nature intended," and therefore with less risk and danger and more profit.

This is especially true of the back-lot poultry plant. A lack of ground or range, a desire for peace with the neighbors and a proper regard for city ordinances have contributed to steadily better methods of poultry keeping.

A confinement method of brooding and growing chicks is here described and illustrated.

The writer's method of brooding as followed on his own small plot of ground eliminates any interference by Nature, and, in addition, the chicks are safe from hawks and those carriers of disease, the rats, sparrows and pigeons.

Like many back-lotters we have houses built for other purposes, but remodeled into poultry houses. But the ideal house plans are adaptable to other shapes and sizes. The house is 8x10, of the open front type, with a storm hood, (see sketch). The sash has eight lights, or two fours fastened together, a simpler arrangement than that of four sash, to open and close.

In the spring the glass sash are unhooked and stored until late fall. The house is kept as airy as possible at all times. In the center of the front is the ventilating opening; a screen of open weave burlap tacked to both sides of a light frame covers this opening only on zero nights and during high winds.

A tight board floor covers two-thirds of the floor space. The front third is a dirt scratch pen filled in a trifle above the outside ground level to keep the dirt reasonably dry during wet weather. The scratch pen is divided by a wire partition into two sections.

To avoid contamination and to keep the pens in a sanitary condition, the dirt is frequently turned over and sowed

By C. E. ASBROOK

Heavy Losses of chicks result from unnecessary exposure—The need of brood coops—A good arrangement suggested for the back-lot poultry keeper.

general yard or to an outside covered run which may be used to double the capacity of the pens for large broods.

If there is not a rat-proof foundation under the house the pen doors are closed at night against any rat that might dig into the pens.

For a larger two-story house we are building this season, the pens will be wired off from floor to ceiling.

The dropping board, (which by the way is made to slide forward nearer the openings during hot weather) is put in as it holds some of the warmed air around the brooders.

In the fall the nests are put in and the brooder house becomes a busy "egg factory."

We use portable oil burning brooders, although the coal burning stove with hover or even hens confined to small coops would be just as satisfactory.

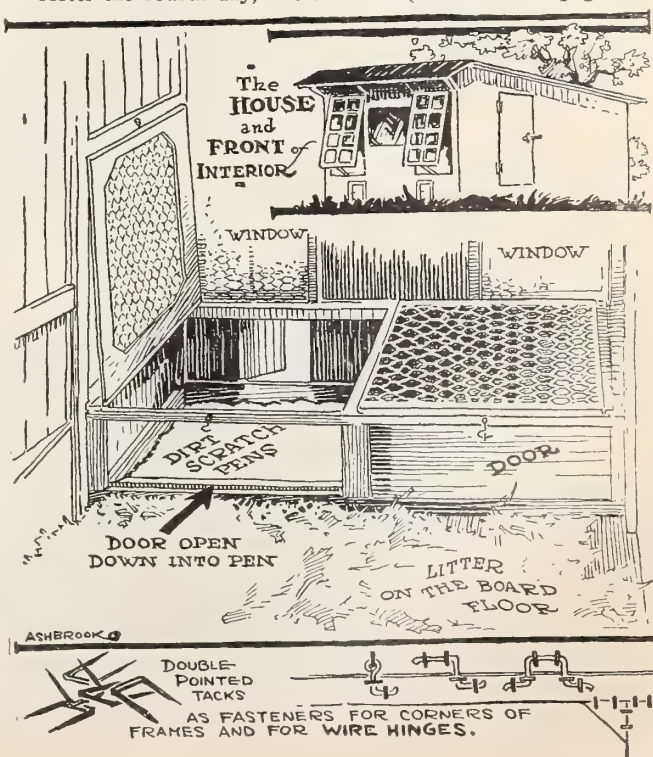

With us the fireless brooder is known as "the shiver." The fireless is a satisfactory "mother" only when enough chicks are inside to create the necessary warmth. One or two chicks slipping into a fireless hover to warm up will find only disappointment and chill. A chilled chick is a sick one and a menace to the family of which he is a member.

Our feeding schedule is very simple. After the chicks are seventy-two hours old they are given a little water (with the chill taken out) and a little sand. Then a commercial growing mash is set out in chick hoppers and thereafter kept before the chicks at all times. The commercial dry mash is much more finely blended than the home ground and home mixed and is fed, therefore, until the eighth week, when it is replaced by the home mixed formula.

After the fourth day, fine cracked (Continued on page 360)

After building a brood coop, no admittance is allowed to wind, rain and snow.

What Is The Most Profitable Breed To Keep?

THE discussion of whether the Leghorn vs. the Wyandotte on one hand, or the Ancona vs. the Plymouth Rock on the other, is the more profitable kind of breed or breeds to keep on a commercial scale, has raged in a mild form from coast to coast, with the advantages first triumphantly gained by one side, only to be lost by an avalanche of figures from the camp of the enemy. I am given to write about this interesting phase of modern poultry keeping in this country, because I think there must be some explanation why certain breeds are more popular commercially than others. I have not a feather to pick with anyone in this connection. In years past I have upheld the Leghorn above all comers, and then have had occasion to reverse my opinion at certain times. I am a great believer in the fitness of all of our more popular breeds as we have them today. I believe many of them are the outcome of economic necessity, and I further believe that they are fulfilling their mission fairly well—extremely well in many instances, with room for considerable improvement in others. But when one breeder breaks forth in print, even if it is in an advertisement, and claims every advantage for his breed, quoting lowest up-keep cost, highest price for eggs, smallest housing room required, largest returns on table and breeding stock, we may be led to believe that there is something amiss. In any case, the ever-interesting query: "which is the most profitable breed for me to keep," is received each year many times in the offices of the American Poultry Journal, so that an analysis of what may be classed as disadvantages and what constitute advantages will not be out of place here, especially at this time of the year when many contemplate entering the poultry business.

Let us divide, to make discussion easier, the main elements that go to make up the production costs of all kinds of domestic poultry, as well as their various main sources of income.

1. Amount of feed consumed.
2. Amount of housing required.
3. Labor involved.
4. Investment.
5. Amount received for table eggs.
6. Amount received for chicks and hatching eggs.
7. Amount received for breeding stock.
8. Amount received for carcass.
9. Fertility and hatchability of eggs.
10. Market conditions.
11. Climatic conditions.
12. Demand.

It will be noted that the cost elements are first considered, followed by sources of income.

In this article we will simply consider the two main branches of popular domestic fowls as bred in this country, namely, the lighter, such as the Leghorns, Anconas, Campines, and the dual-purpose or heavier, including the great Plymouth Rock, Wyandotte and Red families. The Orpingtons may be fairly classed with these, although they hover between them and the Asiatics. These breeds constitute the vast majority of the pure breeds that are kept, and grade specimens of these breeds make up a large part of the poultry kept in our country.

In order for us to arrive at some sort of definite conclusion as to the relative merits and potential profits of any and all of these breeds, we will take up our headings in detail, so that we may know what our position in the matter may be:

Amount of Feed Consumed

We have pretty accurate figures regarding this. We find, and expected to do so, that the Leghorns and their kind consume somewhat less feed than heavier breeds. This is natural. A two-horse-power engine requires more steam

By **HARRY G. FORSTER**

Leghorns require less house room and less feed—The larger breeds have a greater meat value—The beginner should study his conditions before deciding on a breed.

to make it go than one of one horse-power capacity. While this comparison does not hold mathematically good for chickens, there is some similarity, at least. A 7 pound hen requires more bodily heat, has a greater amount of blood to replenish, and is of larger bone structure than a 4 pounder. Hence, the difference in feed required. From what figures I can gather, and from a chart of comparative amounts, feed consumed between Leghorns and Rhode Island Reds, I should say that the heavier breeds require between 25% and 33⅓% more feed than Leghorns. This is not excessive. Let us keep it in mind, however.

Amount of Housing Required

Whether we allow three or four square feet of floor space per bird for the average flock of Leghorns, we will find by experience that the Plymouth Rocks will take about a foot more. What else is to be expected? Doesn't a seven pound lady require more scratching, exercising, and roosting room than a four pounder? If, therefore, we have a house large enough to accommodate 100 Leghorns, we cannot expect to place more than about 70 of the heavier kinds there and still allow them the same comparative freedom. Multiply this by ten for a commercial farm of medium size, and a considerable expense has been added to the housing bill, we find. Another item to remember.

Labor Involved

We cannot say that a flock of Reds requires more time expended upon it than a flock of Leghorns, of course. But we do find that if we require greater housing space for the larger varieties there are more steps to take, more actual labor involved. How much that may be it is hard to determine, but there is a difference. I doubt whether it is an item of much consequence. A few extra steps each day, a pail or so extra of water, a longer mash trough, or a little extra feed given to a flock of Reds does not cost very much more than for the same number of Leghorns. However, commercially speaking, where every cost counts, we may at least give it a little thought.

Investment

If we require additional housing room for a given number of birds of the heavier variety over that of a lighter, naturally our capital investment is bound to be somewhat heavier. If 1000 Leghorns require a \$1,500 laying house, the same number of Reds would require, I should say, one costing perhaps \$2,000. More room, more lumber, more labor, more money spent. The brooder equipment would be about the same, as chicks of any variety should have about the same heating equipment, and then when growing on range, the same acreage in which to develop.

Fertility and Hatchability of Eggs.

How about it? I think most will admit the fact that the lighter, more active varieties show the higher percentage of fertility, especially in the early part of the breeding season. I speak commercially and in general, realizing that we can prove all sorts of exceptions to prove the rule against this or anything else. As to the hatchability of the eggs, I think that all the better bred dual-purpose fowls show about as high a percentage as the lighter. But at that, it takes more hatching eggs to secure the desired chicks. Why do hatcheries and commercial poultry establishments quote lower prices on Leghorn chicks than on Wyandottes or Reds?

Now, so far the Leghorn enthusiast, reading these few lines, may be smiling to himself and thinking that he has won his case hands down. But after all, it isn't entirely what a product costs to produce, feed, house, hatch, and raise that counts—other things (Continued on page 354)

More Strong Chicks Are Wanted This Season

"SET five eggs for each pullet wanted." This is the advice of experts in poultry farm management and the figures are based upon the average results secured by a large number of poultry keepers under varying conditions. Poultry statisticians tell us that one pullet out of every five eggs is a reasonable expectation, but conditions must be favorable if even this ratio is realized. Records from poultry experiment stations and from commercial hatcheries and individual poultry keepers show that a 50 per cent hatch is somewhere near the average, and to raise 75 per cent of the chicks hatched is a creditable accomplishment. Of course, approximately half of the chicks raised will be cockerels, so that an average of one pullet from each five eggs appears to be a liberal estimate.

Since less than 40 chicks are raised out of the average setting of 100 eggs, we can say that chick raising as generally carried on is only 40 per cent efficient and there ought to be an opportunity for nearly 100 per cent improvement over present average conditions.

The annual loss from eggs which fail to hatch and from chicks that die before they reach maturity represents an enormous total for the United States. A recent publication from the Purdue Experiment Station contains the following statement: "The state of Indiana loses annually more than 5,000,000 dozen eggs and 30,000,000 chicks through its efforts to rear sufficient chickens to maintain the 17,000,000 hens on Indiana farms. These figures mean that one-half of all the eggs incubated fail to hatch and nearly one-half of all the chicks hatched die before reaching market size or maturity."

With the aid of modern brooding equipment combined with careful attention to the ration and feeding methods, a large number of poultry keepers have demonstrated that the losses in brooding can be reduced to a minimum when strong chicks are available at the beginning of the brooding period.

While enormous chick losses are still experienced by poultry keepers who are handicapped by lack of brooding equipment or by inefficient feeding methods, the biggest source of loss on well managed poultry farms and the place where the greatest chance for improvement lies, appears to be in the matter of the production and incubation of hatching eggs.

Vitality Must be Inborn.

There are several well recognized factors that affect the number and strength of the chicks hatched. The selection and care of the breeding stock rank first in importance in the matter of hatching a larger number of strong chicks. Vitality in poultry is quite largely a mat-

By T. S. TOWNSLEY

Chicken rearing is today only 40 per cent efficient—Factors that affect the number and strength of the chicks hatched—Influences that affect chicks after hatching.

ter of heredity, and in order to hatch strong chicks the breeding stock must be carefully selected from the standpoint of health and vigor. The females for the breeding pen ought to be selected with special regard to their good physical condition and laying ability. Mature hens are more desirable than pullets in the breeding flock because more can be judged about the producing ability of a bird that has been through one to three or more laying seasons than with the pullet that has just begun to lay. Particular attention should be paid to vigor in the male side of the breeding stock because the physical characteristics of the male will have an influence on a very large number of chicks. Vigorousness is indicated in the rooster by good physical development and spirited activity.

The good health of the breeding flock at the time the eggs are laid has an important influence on the number and kind of chicks hatched. The very best hatching results are usually obtained from farm flocks that are given absolutely free range, and the more closely the breeding stock is confined the poorer the hatches are likely to be. Perhaps the greatest difficulty in securing good fertility in hatching eggs comes from close confinement of the breeding stock. In so many cases the breeder who has a special breeding flock keeps them confined in a small pen so that the health of the birds is impaired and the fertility and hatchability of the eggs greatly weakened.

The way in which the eggs are handled from the time they are laid until incubation starts also is likely to have an influence on the number of chicks hatched and the strength of those that do hatch. Where the eggs are subjected to chilling many of the embryos will be killed and the eggs will show a high degree of infertility. On the other hand, if the eggs are kept too warm the embryos are likely to develop to such an extent that subsequent cooling will injure the hatchability. In order to keep the eggs in best condition for hatching they should be kept at a temperature of about 50 degrees in a well ventilated room.

Aside from the strength of the breeding stock, the most important causes of poor hatches are to be found in the conditions under which the eggs are incubated. An occasional perfect hatch is reported where eggs are set under hens, and under right conditions the hen is the most perfect

incubator yet devised. However, where hen hatching is practiced there are probably as many cases of poor hatches as are found with incubators. Much of the grief in hen hatching comes from the failure of the poultry keeper to provide a suitable nest for setting purposes. The ideal setting nest is one that is located on the ground and is sufficiently sheltered (Continued on p. 350)

Combination colony coop for setting hens and brooding chicks.

Four hens can be set in this combination coop.

Editorial

Great Poultry Breeders

WHO are the great breeders? They are greatest who embody in their birds the greatest number of the greatest ideas.

That is not easy of accomplishment. If we select for one point only we get ahead rapidly. The more points aimed at, the more complex is the problem. Great breeders know this, so they free their work as far as possible of minor details, balancing their breeding pen with a male that is strong in those small things in which the female is weak; and then breeding for those major characters which are to set their birds fundamentally ahead.

There is a breeder of Barred Rocks who, no doubt, has had light colored eyes and dark colored shanks to contend with, but he has selected his breeding birds to overcome these little things, and has gone ahead on the great program of breeding a straight bar on a feather that carried considerable surface barring.

There is a breeder of Rhode Island Reds who, no doubt, has had to contend with smut on the one hand, and wings free from black markings on the other. But, he balanced that excess and weakness in mating his birds in the breeding pen, and went ahead on his major program of breeding breasts and fluff as rich as the top color and breeding necks and backs that matched.

He also eliminated the short, narrow feathered birds. He wanted more of the web to show on the surface of his males' backs. Half of the Rocks and Reds are of a contrasting color on top of their backs because not enough surface of the individual feather shows.

Breeders achieve greatness because they observe and study these points which bear directly on the kind of a fowl they breed. First thing one knows, their birds are different. There is a distinctive character about them. Some people then say: "His birds show breeding"; and others add, "He has a strain."

First of all was a lofty conception of the ideal bird. Then followed a careful study of each available breeding bird. Then came the rearing of the broods, the breeder well knowing that the law of heredity is a fact, and what is bred into a flock will sooner or later show up. In these three things—first, the high ideal; second, the rigid selection; third, respect for ancestral lines—you have the rules of guidance for successful breeding.

It would be difficult to determine which is the more important factor, the ideal, the selection, or the line breeding. The three are indispensable, like the legs of a three-legged stool. Remove one leg and the stool falls over. Yet, if we were asked for the biggest word in the breeder's parlance we should say "selection." Man has no power over nature except the power of motion. He has no key to her secrets. He can only separate, select and mate. The rest is done by nature within the species.

A man's limits are reached when he puts two birds together. It is not within the range of his abilities to add so much as a single separate feather to the back of a hen. Indeed, he cannot make with his hands and add a filament to a feather. It is only for him to exercise his power of thought in conceiving of a worthy ideal, to exercise his power of motion in selecting the breeding birds, and then to respect ancestral heredity. Such is the unchangeable formula of all great breeders.

Oak Dale Farm Engages Harry M. Lamon

Harry M. Lamon, Senior poultryman, Bureau of Animal Industry, U. S. Department of Agriculture, has resigned his position as head of the poultry husbandry work of the Federal Government, March 1, 1922, to accept the position of poultry-

man and general superintendent of Oak Dale Farm, Minnesota. This is the largest White Leghorn breeding establishment in North America and offers a big job for a big man.

Mr. Lamon has been with the U. S. Department of Agriculture for twelve years. He went to Washington, April 18, 1910, and was put in charge of the poultry husbandry work of the Bureau, June 1, 1912. Since that time he has built at Beltsville, Maryland, the largest and finest poultry experiment station in the world. On that farm he has built up flocks of White Leghorns, White Wyandottes, Rhode Island Reds and Barred Plymouth Rocks that combine high production with Standardbred qualities. He has developed a new breed which has more meat properties than the White Leghorn, has red earlobes as a distinctive breed character, and lays white-shelled eggs. Upon order of the Secretary of Agriculture this breed has been named "Lamona" in honor of its originator.

During the past two years, Mr. Lamon has issued three new books, cloth bound, which merit a handy place in every poultryman's library. These are a book on "Practical Poultry Production," a volume on "The Mating and Breeding of Poultry," which includes the tried and true experiences of eighty experienced breeders, and lately has appeared his new work, a book on Turkeys. We understand that in addition, he has in course of preparation a book on Poultry Feeds and Feeding. Alfred R. Lee is the co-author of this latter contribution to poultry literature.

It would have been difficult for Oak Dale Farm to have found a better qualified man in all America. Mr. Lamon is not an agricultural college man. He got his poultry education before going to Washington from twenty years in overalls carrying the feed pail. His successor in the government work has not yet been announced.

It is a distinct loss to the breeding fraternity to lose Mr. Lamon from his official position of power in behalf of purebred poultry on the Government farm. One thing, the purebred breeders in this country should see to it that the fine studs of birds on the Beltsville farm are not allowed to slide by a successor who does not have the breeder's viewpoint. Nothing in this connection would be more gratifying than for Dr. Mohler, Chief of the Bureau of Animal Industry, to arrange with Mr. Lamon to make an annual pilgrimage to Beltsville, for at least the next two breeding seasons, to mate the birds there. The breeders of this country need the support of Standardbred quality bred for production values on the Government farm.

It will be the privilege of Mr. Lamon to employ his constructive methods of breeding on the fine Oak Dale stock, the foundation of which was the original flock of Dan W. Young, also the entire Owen Farm's stock. And, it will be his pleasure in this new position, to be able to share his success in breeding with any and all poultrymen in America.

State Colleges Should Take Notice

The initiative taken by Harry M. Lamon on the Government farm in combining Standard exhibition type with performance in the trapnest, was a progressive attitude that excited the interest of breeders generally, and has been followed by some of the state agricultural experiment stations. The opportunity to continue this line of work with the hope of receiving full credit in future for carrying out a noteworthy project along breeding lines is now within the grasp of the state institutions. The Government farm has lost its leadership.

In the December issue, 1920, we told of the progressive step taken by Professor W. C. Thompson of the New Jersey Agricultural Experiment Station, in introducing into the flock of White Leghorns at that Station's poultry plant, twelve Standardbred cockerels with egg pedigrees from the Government flock. We referred to this as a course that should be followed

by other agricultural colleges. This editorial was well received. Wm. C. Sanctuary, Professor of Poultry Husbandry at the Massachusetts Agricultural College, wrote: "You may be interested to know that the staff here decided to also co-operate with the Federal Government to the extent of bringing in eggs here directly from Washington, and to continue the pedigree work here." Unfortunately only stock, not eggs, seemed to be available, but that is unimportant. It is the attitude of Prof. Sanctuary and his associates toward the standard bird of the purebred breeder that is the fundamental thing. Ways are always found to get good quality, if a man once focuses his hopes on it.

Professor A. C. Smith, Minnesota Agricultural College, has called attention to the fact that that institution already had a number of birds of good breeding, including some blood from Mr. Lamon's flock. T. S. Townsley of Missouri wrote:

"I would like very much to have you visit the Missouri Poultry Experiment Station at Columbia and see the type of stock that Professor Kempster has developed on the Experiment Station farm here, and would especially like to have you go out into the state and see some of the flocks which have been developed from the stock Professor Kempster has sent out. I believe if you could see these birds that you would admit that the Missouri College of Agriculture has been doing some Standard-bred breeding along with her work in developing high laying strains. I may say at the present time Professor Kempster has sixty-five 200-egg White Leghorn hens ready for his breeding flock for next spring and that these birds are mated with cockerels of high Standard characteristics produced from the station flock here. In pen 1, where Professor Kempster has his best White Leghorn females, he has a White Leghorn cockerel that would not be disgraced in any show and would win in a majority of the shows held in Missouri. This cockerel was bred by Professor Kempster on the University farm and has the following pedigree:

"His dam laid 227 eggs her first year and 211 her second year. His dam's dam laid 222 eggs her first year, and his dam's granddam laid 185 eggs her third year. His dam's sire's dam laid 214 eggs in her pullet year. His sire's dam laid 218 eggs and his sire's dam's dam laid 202 eggs in her pullet year, while his sire's sire's dam laid 222 eggs in one year.

"During the fall of 1920 Professor Kempster furnished about 100 pedigreed 200-egg cockerels to head certified breeding flocks in Missouri. It has been my good fortune to handle the young stock produced on most of these farms, and I may say the improvement noted as a result of the influence of the male on the hens which have been carefully selected has been truly remarkable.

"I may say that Professor Kempster bought a White Leghorn male from the Government farm at Beltsville about four years ago and this is the only new blood that has been introduced into the University flock in a number of years. The bird secured from Washington was truly a good specimen of the breed, but was not better than dozens of the birds produced the same year on the University farm here."

It is gratifying to read of the sound and progressive work that is being carried on at the different agricultural colleges. The influence of these seats of learning is very great, the results of their experimental work is far-reaching. Following is another letter which we received from the University of Kentucky, written by J. Holmes Martin, in charge of Poultry Husbandry:

"I would like to call your attention to the fact that the University of Kentucky has been breeding for this combination of Standard qualities and egg production for the last two or three years. We entered birds in the exhibition classes of the open show last year and won the following premiums at Louisville.

"White Leghorns—First cock, first and fourth hen and first pullet.
"Anconas—Third cock.

"White Wyandottes—Third cock, fifth pullet.

"In the Cincinnati show, January, 1921, out of ten entries we won eight premiums as follows:

"White Leghorns—Fourth hen, fifth pullet.

"White Plymouth Rocks—First and fourth pullets, second cockerel.

"Anconas—Second cock.

"White Wyandottes—Fourth cock.

"Rhode Island Reds—First utility pullet.

"This winter we are entering twelve birds in the Cincinnati show. The White Wyandotte cock bird which won third at Louisville and fourth at Cincinnati is out of a 250-egg hen. We have some wonderful pullets from him this year which are starting off with splendid trap-nest records.

"Work with the Barred Plymouth Rocks is progressing very nicely and we have a number of pullets of that breed with excellent color that are on the road to big egg records."

Mr. Martin sent in connection with his letter, the photograph of a White Wyandotte cock that won second prize at the Cincinnati show, January, 1922. We reproduce the illustration of this bird on the following page. A son of this cock won third at Cincinnati as a cockerel. This cockerel was out of a 209 egg hen.

We also reproduce a half-tone likeness of the 209-egg White Wyandotte hen bred by Mr. Martin on the Kentucky College

plant. While this female is somewhat of a "utility" Wyandotte, lacking the finished lines of a Standard exhibition bird, we are not so much concerned about the quality of this hen. She is but a temporary expression of the breeding work at Lexington, limited by the limits of a chicken's span of life. What does impress us is the fundamental attitude of the College at Lexington toward the purebred fowl. With the end aimed for the combination of good standard type with production values, the quality of the individual birds will steadily advance.

We are also pleased to chronicle that the Kentucky College is entering in competition. This question of the State colleges competing with individual breeders has been thoroughly thrashed out by the cattle and swine men. At first, some of the breeders objected, but today they welcome the competition. They realize that the state experiment stations, supported by taxation, are the proper agencies to carry on experimental work with the breeds, doing breeding work along lines that the individual breeder can ill afford to do; and the cattle and swine men have come to fully appreciate that all of this work is done unselfishly for the single purpose of advancing their best interests. Therefore, they welcome the specimens of the state institutions being shown alongside of their own animals. Prizes are well distributed and the breeders continue to win their full share.

Standard Committee to Meet

Thos. F. Rigg, President of the American Poultry Association, has called a meeting of the Standard Revision Committee, whose duty is to revise the present 1915 edition of the Standard of Perfection, and prepare the text for the 1923 edition. Mr. Rigg's announcement follows:

"The Committee whose duty it is to prepare the text and illustrations for the 1923 edition of the American Standard of Perfection, will meet in the Lexington Hotel, Chicago, Illinois, March 4, 1922.

"The poultry press has been asked to send representatives to the meeting that the work of the committee may be given wide publicity. All specialty clubs have been asked to co-operate with the committee and to have an accredited representative present.

"I ask the co-operation of all fancier-breeders in our effort to serve well the interests of all concerned."

In asking the poultry press to attend and report this meeting, Mr. Rigg has acted wisely. The Standard of Perfection does not belong to the A. P. A.; it is not the Association's property to do with as it pleases. The Standard belongs to every breeder of Standardbred fowls; it is the rightful property of every breeder who has paid above market price for a fowl because that specimen represents Standard quality; the text and description of each breed belongs to those breeders who mate and select their birds along the lines laid down in the Standard; in short, the Standard belongs to those breeders who are loyal to it. The A. P. A. is only the custodian of the book, accepting the responsibility of correcting it and improving it in accordance with the work of the breeders. Therefore, the A. P. A. owes it to the breeders to give them full notice, through subsequent issues of the poultry press, of every proposed change in the text of the Standard. It is plainly Mr. Rigg's purpose to do this, as indicated by his invitation to the poultry press to send an accredited representative to the revision meeting. Then at the annual meeting of the A. P. A. in Knoxville, Tennessee, August, 1922, the breeders, being fully informed and forearmed, will be in position to vote, with full understanding, to accept or to reject each of the changes proposed by the Revision Committee.

Mr. Rigg asks for the Revision Committee the co-operation of all breeders and specialty clubs. In a letter addressed to the secretaries of the specialty clubs, he says:

"The Standard Revision Committee is desirous of meeting the demands of the fancier-breeders of all Standardbred fowls. As a matter of self-interest and for the good of all concerned it is incumbent upon all breeders and fanciers to make their wants known to this committee. We especially desire to have the united opinion of members of all specialty clubs.

"Club secretaries can give the committee valuable aid by placing in the hands of the committee the desires of their members. I sin-

cerely hope you will do this. Also that you will appear before the Committee in person that we may know in detail the desires of those whom you represent, as secretary of your club."

The specialty clubs occupy a very strong position theoretically in relation to the Standard Revision Committee. In setting forth the "Duties of the Committee on Standards," the laws of the A. P. A. specify:

"Where a Standard is submitted by an affiliated and truly representative specialty club, the Revision Committee shall not have the power to alter or change it, except that it shall adequately protect breed type, preserve uniformity of variety characteristics and shall edit the whole Standard so as to secure uniformity of technical forms and expressions. It is the intent of this section that the recognized and active specialty clubs of the United States and Canada shall be encouraged to prepare the Standards for their respective varieties or petition for any changes in the now existing Standards."

On the strength of this clause, the National S. C. White Leghorn Club is holding up the preparation of its own Club Standard, which the Club planned to issue and distribute. As the time is short until the March meeting of the Revision Committee, the White Leghorn Club is waiting to see if the Standard Committee will adopt the joint Leghorn club's recommendation as regards type, etc., and is also waiting to see what attitude the Standard Committee will assume toward the matter of subdividing the main Standard and issuing small breed sections at a nominal price; and the Leghorn Club is also waiting to see what position of leadership the Standard Revision Committee takes in the important matter of securing wider distribution for the Leghorn section of the Standard.

There should be but one Standard issued from only one source, for any breed, that there may be no confusion; and the responsibility of taking the initiative and satisfying the breeders, both in respect to the Standard text and illustrations, and then providing for wider dissemination of that printed Standard, rests with the Standard

Interior view of office of the American Poultry Association, Fort Wayne, Indiana. From left to right are Mrs. E. B. Campbell, Secretary, stenographer, Thomas F. Rigg, President.

Committee. The opportunity is theirs!

Because of the low state of the American Poultry Association finances, it was suggested to Mr. Rigg that he call the meeting of the Standard Committee at Knoxville, Tenn., just prior to the annual meeting of the Association, which is to be held the second week of August, at Knoxville. This plan was abandoned on account of article XXV in the laws of the Association, which provide that:

"Written notice specifying word for word the proposed changes shall be filed with the Secretary one hundred and twenty days before the date of the annual meeting at which the matter is to be considered."

Mr. Rigg interpreted this rule to apply to the changes that will be recommended by the Revision Committee, and as a result the meeting of the Committee has been called for Chicago this month. This will allow plenty of time for all interested to digest the changes which the Committee will make in existing Standards.

When the 1915 Standard was re-

vised, the Committee met in Indianapolis in July, 1913. The result was that the August 1st issues of the poultry press carried a review of the Committee's work, and those issues scarcely reached the breeders before the annual meeting of the American Poultry Association, which was to take final action on the Committee's work, was called to order in Atlantic City, N. J., Aug. 13th. The result was that the material for the new Standard was in such shape that the work was not concluded until the next year, at the A. P. A. meeting in Chicago, Aug., 1914.

The work is so planned this time that nothing should be held in abeyance, everything should be finished in due time, so the 1923 issue of the Standard may be authorized at the Knoxville meeting. The principle draw back to a consummation of the work, and publication of the book, will be a matter of finance.

It will be surprising news to many members to learn that the monies in the Standard reserve fund, on February 1, 1922, amounted to only \$494.23.

It was thought that every possible safeguard had been thrown around the Standard reserve fund. This is a separate fund, maintained for the exclusive purpose of meeting the expenses entailed in the revision and publication of Standards. The laws of the Association state that:

"Twenty per cent of the gross receipts from the sales of all standards shall be put in a reserve fund for the publication of Standards and under no circumstances shall any portion of this fund be used for any other purpose than the publication of Standards."

The Principle function of the A. P. A. is to make the Standard. The Standard of Perfection is its biggest asset. The Standard holds the A. P. A. together. The Standard is the A. P. A. Yet, after 7 years of sales of the 1915 edition only \$494.23 remain in the Standard reserve fund.

Pair of Purebred White Wyandottes owned by Kentucky College of Agriculture.

"The Layers Win and the Winners Lay"

Regal Dorcas Eggs Bring Success

EGGS SHIPPED 3000 MILES

Mr. John S. Martin,
Port Dover, Ont.

Dear Sir: Drain, Ore., Nov. 29, 1921.

Words cannot express my appreciation of the service you gave me last spring with the three settings of eggs I ordered from you. I hatched thirty chicks from eggs shipped close to 3,000 miles. I have now eleven pullets and eleven cockerels and if I had only hatched one cockerel like the one I have, which is the apple of my eye, I would have considered that I was more than paid for the amount I invested. I have no difficulty in separating them from the rest of my flock as you can see Regal type all over them. I certainly am very pleased and wish to thank you again and I wish to say that every time I can spare the money I am going to buy stock and eggs from your yards. Wishing you success, I remain,

Yours sincerely,

Jack Roach.

Record of 261

Dear Sir:

I am writing you to let you know the high egg record made by a Wyandotte pullet hatched from eggs bought from you in the Spring of 1920. This pullet's record for the year was 261. Every egg proved fertile and 75 per cent of eggs set hatched. She was from pen No. 26 and was hatched May 2nd and commenced to lay November 12th. I have some pullets bred from a cockerel from pen No. 34 that commenced laying at five months and ten days.

Yours truly,

Edward Backhaus.
Rochester, Mich., Dec. 8, 1921.

Vice President's Cup

Meadville, Pa., Dec. 14, 1921.

Dear Sir:

I am pleased to advise you that we won First Pullet and Vice President's Cup for best pullet in American class at Washington, D. C., November, 1921. She was sired by a cockerel I purchased from you last Spring. Please quote me price on a good hen to mate to my cock bird.

Yours sincerely,

J. Remler.

Rockville, Conn., Nov. 19, 1921.

Sweep at Detroit

Dear Sir:

I just got back from the Detroit show and had such mighty good luck I am going to tell you at once. I won as follows: 1st and 5th cockerels, 1st and 5th on pullets, 1st and 3rd young pen, 1st old pen. Got all specials including the grand sweepstakes over all classes.

Yours sincerely,

C. W. Case.

Regal Dorcas White Wyandottes are the Ideal Fowls Regal Matings for 1921

For years I have made it a practice to reserve my prize winners. With but few exceptions, my winners at Madison Square Garden, Boston, Syracuse and Kansas City are all in my breeding pens at Port Dover, as well as hundreds of others of the same breeding, and very close up to them in quality.

What Does this Mean to My Customers?

It means that my customers who send to me for eggs will get them from the very best lot of matings in America. No pens reserved. I have always sent our eggs from my best birds and this fact being generally

known, has done more to build up my business than anything else. What other breeder has sent out eggs that have produced First Prize winners at Madison Square Garden, Boston and Chicago?

For the season of 1922 my sixty-eight Exhibition and Dorcas Matings are the finest I have ever offered, and represent the result of years of careful breeding.

FREE—Send for 20 page catalog fully illustrated, telling all about the Regal Dorcas Strain and my matings for 1922.

Send 10 cents for a copy of the Regal White Wyandotte Book. The information it contains will be very useful to you.

EGGS for HATCHING

DORCAS MATINGS:

\$ 5.00 per 15 eggs.

15.00 per 50 eggs.

27.00 per 100 eggs.

SPECIAL MATINGS—

(Exhibition or Dorcas)

\$10.00 per 15 eggs.

Amenia, N. Y.

SEE MY ADVERTISEMENT ON THE BACK COVER PAGE

This is not enough to pay the expenses of the Standard Revision Committee at the forthcoming Chicago meeting. There are nine men on this Committee who are to come from widely separated places, Texas, New York, Canada, Washington, Missouri, Indiana, etc. Their railroad fare will amount to perhaps \$500. Then they will be in Chicago for at least ten days. During that time each man will receive a per diem of \$5 a day, and another \$5 a day or more for hotel bill. That will run up a bill of \$90 a day for the Committee. Ten days of this and \$500 for railroad fare makes a total item of \$1400. Where is the money to come from?

In addition to this, there will be artists to pay for illustrations. The charge will be something like \$100 for each variety to be illustrated.

With these charges taken care of, comes the cost of white paper, type setting, half-tones, press work and binding, which will run into several thousand dollars, and which expense must be incurred before a single copy of the 1923 Standard can possibly be published and sold. Where is the money coming from?

Let us go back and see where the money has gone. Something like \$16,000, roughly stated, has been spent on the Breed Standards. The magnificent Wyandotte Standard, which informs the reader how to build 'roosting coops,' how to mix 'a mash,' how to make a 'hen's nest,' how to use 'disinfectants,' how to make the 'walls and roof' of a poultry coop, this wonderful Wyandotte Standard is a part of the \$16,000, which money is gone. The Wyandotte book also tells how 'poultry keeping brings health' to the poultryman, it tell how to use 'condiments and laxatives,' how to 'compel exercise' and 'prevent diseases of the head,' how to lift a bird out of a 'shipping coop,' how to 'construct shipping coops,' etc. etc.

The Wyandotte book is a practical breed book. Was it given the title of "The Wyandotte Standard and Breed Book," so that the funds of the Standard reserve fund would be available for its publication? Are utility standards, production standards, and egg standards also to draw on the money in the Standard reserve fund?

Perhaps all of these things are good in their way; perhaps the advice in the Wyandotte Standard to the effect that when birds are shipped to shows "a small handful of oyster shells and grit should be supplied" in the shipping coop—is information well intended, yet the fact remains that the Standard funds should remain inviolate for the purpose of financing successive editions of the Standard of Perfection, the book that officially governs the judging of purebred fowl. It is a serious situation when the Standard reserve fund is depleted and the Standard is menaced.

The A. P. A. is not now bankrupt, but the Committee of Forty, with a new and ambitious program, opened the way to finish the job. We caution you that there are "inflationists" at the helm, and you are drifting closer and closer to the barren, bleak, rock-bound shore of reality.

**BABY CHICKS
OF QUALITY
AND MERIT**

OVIE'S BABY CHICKS MAKES PRODUCERS!

For years we have been building up utility heavy laying strains of exhibition quality so our customers will be assured of success. Our system of incubation produces the highest quality of youngsters for you to begin with.

25,000 Thrifty Chicks Weekly
from free range, carefully selected stock, hatched by experts in a real up-to-date hatchery. 12 leading money making breeds.

\$100 Value

Let us send you the Oliver for Free Trial. The coupon brings it.

If you agree that it is the finest typewriter, regardless of price, pay \$49.50 cash for it, or \$55 on installments—\$3 after trial, then \$4 per month.

If, after trying it, you wish to return it, we even refund the outgoing transportation charges. So the trial does not cost you a cent. Nor does it place you under obligations to buy.

Our new plan has been a tremendous success. We are selling more Olivers this way than ever before. Over 900,000 Olivers have been sold! Oliver popularity is increasing daily.

This, the Oliver 9, has all the latest improvements. It is noted for its sturdiness, speed and fine workmanship. It is handsomely finished in olive enamel and polished nickel. If any typewriter is worth \$100, it is this Oliver, for which we now ask only \$49.50, after its being priced for years at \$100.

Mail the coupon for EITHER a free trial Oliver or further information. Be your own salesman and save half. This is your great opportunity.

Canadian Price, \$79

The OLIVER Typewriter Company
1973 Oliver Typewriter Bldg., Chicago, Ill.

13c a day soon buys an Oliver Typewriter—latest model

Before you realize it you have this splendid Oliver paid for. And you get to use it right away—while you pay.

To begin with, you save \$50.50 on the price, for we now sell the standard \$100 Oliver for \$49.50 cash. Or you save \$45 if you pay the installment price of \$55. It is our latest and best model, the No. 9. The finest product of our factories.

We are able to make these great savings for you through the economies we learned during the war. We found that it was unnecessary to have great numbers of traveling salesmen and numerous expensive branch houses through the country. We were also able to discontinue many other superfluous sales methods.

You may buy direct from us, via coupon. We even send the Oliver for five days free trial, so that you may act as your own salesman. You may use it as if it were your own. You can be the sole judge, with no one to influence you.

Now \$49.50

This coupon brings you a Free Trial Oliver without your paying in advance. Decide yourself. Save half.

Or this coupon brings further information.

Check which you wish.

THE OLIVER TYPEWRITER COMPANY,
1973 Oliver Typewriter Bldg., Chicago, Ill.

☐ Ship me a new Oliver No. 9 Typewriter for five days' free inspection. If I keep it I will pay \$55 as follows: \$3 at the end of trial period and then at the rate of \$4 per month. The title to remain in you until fully paid for. If I make cash settlement at end of trial period I am to deduct ten per cent and remit to you \$49.50. If I decide not to keep it, I will ship it back at your expense at the end of five days.

Putnam Home Made Brooder

**Costs Only
\$4.96**

**with Brooder Heater
In Successful Use for Years**

YOU can make a better brooder than you can buy. A 14-year-old boy can do it in an hour with no tools but saw and hammer. Your brooder complete with Putnam Brooder Heater, ready to receive the baby chicks, need not cost you more than \$4.96.

This home-made brooder will care for from 25 to 60 chicks. You can make as many brooders as your plant demands. Naturally, chicks do better in small flocks.

The Putnam Brooder can be operated anywhere—in the house, in an open shed, or a roof can be provided and the brooder set out of doors. The hover is so constructed that the chicks find the exact temperature they need. The hover can be adjusted to suit any season, February to July.

The Putnam Brooder Heater is constructed on the principle of an open fire-place. It carries out the foul air and draws in fresh, invigorating air, providing continuous ventilation. Heat is radiated *from above* upon the backs of the chicks, just as with the mother hen.

The Brooder Heater is made of brass and heavily galvanized iron. It is practically indestructible.

The Putnam Home-Made Brooder is easy to clean. You simply lift out the hover and the heater. The floor of the Brooder is even with the ground; the chicks have no steps or inclines to learn. They don't get lost or cold.

The heater holds one quart of oil and burns ten days without refilling or trimming; needs no other attention. Every other brooder must be filled and trimmed every day.

HOW TO ORDER

I sell the Putnam Brooder Heater only. The price is \$4.75. Within every Brooder Heater are easy-to-follow directions for making the Home-Made Brooder. Your dealer should have the Putnam Brooder Heater in stock. Ask him for it. If

he doesn't have it, send me \$4.75 each for as many as you need. I will ship postpaid. In ordering please give dealer's name.

GUARANTEE

I guarantee the Putnam Brooder Heater to give satisfaction or it may be returned in good order within thirty days and the money paid for it will be refunded.

Plans for building Brooder and testimonials from satisfied users sent free on request.

I. PUTNAM

Route 305-B

Elmira, New York

Are you going to continue to operate under the present "broad" constitution, and allow yourselves to be lead in the old paths? We hope that you will read the letter of Joseph Dagle, which we print editorially in this issue. What Mr. Dagle says is strongly said, yet it is a strength that rises from sincerity of purpose, from mature and sober judgment.

Mr. Dagle calls for a breeders' organization. He says that the money of the A. P. A. comes from the breeders. He is right, as the following gross receipts of the A. P. A. for the month of January, 1922, clearly demonstrate:

RECEIPTS

Membership fees, ann. life, life in..	\$422.50
Sale of Standards	1,134.76
Sale of Breed Books	221.62
Sale of Show Supplies	1,557.90
Sale of Emblems	9.44
Dues, Annual	57.00

\$3,403.00

Balance First and Hamilton Bank, Dec. 31, 1921	300.00
---	--------

Total\$3,703.22

It is easy enough to ask Tom Rigg to give an accounting. The accounting will be forthcoming, too. But do not blame him.

The man to blame is the man who wrote into the constitution that the Standard reserve fund was to be used for the publication of "Standards," instead of to be used only for the publication of the Standard of Perfection.

The man to blame is the man who wants to "broaden" the functions of the A. P. A., not realizing that the great purpose of the A. P. A. should be to issue the Standard of Perfection to which all purebred poultry is bred and then secure the widest possible distribution for that Standard. This program, which calls for doing the Standard job well; this program carried out with singleness of purpose, will depend on the A. P. A. becoming a breeder's organization, with a breeders viewpoint. The keynote for such a return to the ideals of the organization's founders, was sounded by Ed. L. Hayes, organizer for the A. P. A., at the recent Madison Square Garden show, in the following words:

"It is the duty of the American Poultry Association, as an organization, to render a service to its members, a service founded upon the ideal of those men, such as Felch, Drevenstedt, Thompson, Hewes, Pape, Young and hundreds of others, whose only thoughts are centered upon making the American Poultry Association a breeders' organization for the promotion of the purebred poultry industry.

"No one will dispute the statement that the A. P. A. has been a constructive force in the breeding of purebred poultry, that it has made the poultry industry of today over a billion dollar industry by affording a purebred foundation on which an industry could be built. Let us continue to make this billion dollar industry a reality by standing for the principles of Standardbred poultry as established by the organizers of the American Poultry Association many years ago.

Let us hope that the Standard Revision Committee, assisted by the various specialty clubs, will have the courage and conviction to give us a Standard of Perfection that will serve as a memorial to those men who have spent their lives and fortunes perfecting the various breeds of poultry which we now have.

"Let the officers of the American Poultry Association, who are vested with the constitutional authority, have the courage to serve the membership with a strong and firm hand, so

At Last—No More Mites No More Lice

One of the biggest problems that has confronted poultry raisers in the past is how they could keep their fowls free from mites and lice. Countless remedies and methods have been recommended and used, such as sprays, disinfectants, powders, etc., but all of these various things have proven only partially effective. Besides, they require a great deal of time and attention,—annoying both to the poultry raiser and his fowls.

Probably no other thing that the poultry raiser has to contend with means as much in the way of lost profits through reduced egg production, hindered growth, quality of meat, etc., as these blood-sucking, profit-reducing pests—mites and lice.

CORONA Mite and LiceProof PERCH

will solve this question for you, once and for all. Mites and lice cannot live where Corona perches are used. Mites feed on the fowls while they are on the roost, swarming over their bodies, sucking themselves full of blood, then go back to some secluded crack or crevice to await the next meal. That's where the Corona Perch gets them. The minute lice or mites crawl under a Corona Perch they are "a goner." Corona Perches have a galvanized trough underneath filled with oil. This oil soaks up through the wood so that the underneath part of the roost is always moist with oil,—sure death to mites and lice. The oil is poured into the reservoir through an opening in the top of perch; 30 minutes a year is all the time or labor required to keep roosts filled with oil—just a few minutes two or three times a year—that's all, and the question of lice and mites will not trouble you in the least, because you won't have any. Hundreds of poultry raisers who are using these Perches tell us that it is impossible to find a single mite or louse in their poultry houses. Rev. Morgan Peters says: "I have had Corona Perches installed in my chicken coop after I had given up all hope of ever becoming master of this vermin. These Perches brought immediate relief to my flock and death to the last mite. It truly does the work while chickens are enjoying their night's rest."

Corona Perches come in standard lengths, five feet long. They can be installed in any poultry house. They are very inexpensive, and pay for themselves over and over the first season. They will last a life time, as there is nothing about them to wear out or get out of order.

Write for Free Book and Prices

Fill out and mail coupon today. Tell us how many fowls you have and we will send you our lowest price on Perches needed for your flock. We will also send you a book describing Corona Perches in detail. This book is also filled with much other valuable information for poultry raisers. Don't delay,—whether you have a dozen fowls or a thousand, you cannot afford to be without Corona Perches. They pay for themselves in a few weeks. If they don't completely rid your fowls of mites and lice, you get your money back. We also manufacture Corona Wool Fat Compound for horses and cows, and Corona Balm for household use—products that are well known throughout United States and Canada.

that every breeder will know that the fundamental principles upon which this Association was organized, are being strictly lived up to, and that those principles are guiding us like a beacon light set up by the early breeders of Standard poultry. Then will all of us have respect for the organization of which we hear so much said, and see so many articles written about.

"When that time comes, we, the breeders, will respect the officers and the organizers of the organization who are working for the advancement of Standardbred poultry, and we shall respect them because we shall know that the interests of the breeders are their interests."

Such is the eloquent appeal which springs from loyalty to the traditions of the past. Call Ed. Hayes, and A. F. Rolf, and all the other men of the younger generation, radical, if you choose, but remember the future is theirs, and does not the present need more of their new mind, fresh spirit and generous impulse? Does hope not lie in the younger men and the new leadership which they must assume?

Barred Rock Club Votes.

At the late Chicago Coliseum show, the American Barred Plymouth Rock Club held its annual meeting. Of the 35 members attending, 15 stood up and were counted on the proposition to submit to the entire membership of the club the matter of recognizing and standardizing Light and Dark varieties of Barred Plymouth Rocks. Of the 15 members voting in that meeting, 7 voted against submitting the proposition to the membership by a mail ballot, and 8 voted in favor of letting the entire membership settle the issue.

Accordingly, a vote of the entire membership of the club has been taken. The vote stands: 302 in favor of Light and Dark Barred Plymouth Rocks; 77 not in favor of two sub-varieties.

In suggesting the hazardous possibilities of a popular vote on a technical issue, Henry P. Schwab, in the leading editorial in Everybody's Poultry Magazine, February issue, said:

"The club membership, like that of every specialty club, consists mainly of new breeders of the variety. At the Chicago meeting of the Club in December, 1921, 464 new members were elected, of which, no doubt, the great majority are breeding Barred Rocks for their first or second year; and to ask these new members to vote on a question of great import, to regulate for now, and time to come, questions with which they are not fully familiar, and where experience is lacking, is, to say the least, a gross injustice to such beginners and new breeders.

"To us, it seems that certain old breeders who, for several reasons, have not been able to produce the modern quality in Barred beauties, whose lines are not Standard, and who breed to extremes, take this means to have their extreme dark, rusty-brown males and their light-necked, ill-shaped, pullet breeders Standardized, to prolong their life, increase their business and gain profit by pawning them off on new and unsuspecting breeders."

We believe, and have stated in these columns, that the question of dividing the variety is closely linked with an understanding of the variety. Those who are familiar with the most modern type and color of barring that is today being produced, are a unit in opposing the dual standard for Barred Plymouth Rocks. Unfortunately, many breeders, particularly new breeders, have not had an opportunity to see

HATCH 'EM

IN A

Buffalo Incubator

the "Perfect Hatcher"

Save yourself the trouble and disappointment of poor hatches this season by using BUFFALO INCUBATORS—the machines that, because of their dependability, have become known as the "perfect hatcher." Whether you want a small or large capacity machine there is a BUFFALO that will exactly meet your requirements—furnished in 60, 120, 240 or 360 egg sizes.

The BUFFALO is the perfect hatcher because it has the two things necessary to successful incubation—diffusive heat and correct ventilation, producing that mellow warmth found only in BUFFALO INCUBATORS. The constant and uniform heat in this "perfect" machine is accomplished by my patented sensitive and accurate regulator. The regulator was patented by me in 1895 and has never been equaled—my later improvements have increased its efficiency and ease of operation.

The BUFFALO is built of materials that insure years and years of service—it will not swell or warp out of shape—it is constructed under my personal supervision and built according to specifications that years of continued service have proven correct. We have hundreds of testimonials like the following:

New Hampshire University has increased this season's orders from eleven to TWENTY-ONE No. 3 Buffalos. Prof. Richardson writes that each student is permitted to run the Buffalo through two hatches; and many of them wish to buy and take home this proved "perfect hatcher."

February 10, 1922.

One customer to whom we sold a No. 3 Buffalo says we can figure with him for eight more. He has his Buffalo working beside a No. 3 Standard Cypher and has had a chance to prove the efficiency of the Buffalo, so this sale is as good as closed.

Delta Hardware Co., Delta, Ohio

Mr. Louis Behns of Cullom, Ill., started with Buffalos and buys more every year. His second order this season (in today, Feb. 14), is for another Buffalo coal burning Brooder Stove.

February 1922.

* Please ship another No. 2 Buffalo. I have been using a large Buffalo for twelve years and it is still giving me the best hatches of all I have run, which includes about all on the market.

Frank C. Patten, Oneida, N. Y.

Send your name and address and get free catalog describing in detail the many superior features of BUFFALO equipment. You'll find this season a profitable one if you decide to Hatch 'Em and Rear 'Em with BUFFALO equipment.

After you have hatched your chicks in a BUFFALO INCUBATOR you can further insure your profits if you

REAR 'EM

the best type and color of barring. Moreover, not enough has been said and written about the modern straight, clean barred bird.

There is a feeling among the progressive Eastern breeders that they have gone too long without speaking through the poultry press. While they have talked frankly with those whom they have met in the poultry shows, or with visitors who have visited their yards, they have left the large majority of interested breeders to come in contact with the outside world through the writings of enthusiastic but mediocre breeders and judges.

For two years, Newton Cosh, competent judge and student-breeder of Barred Plymouth Rocks, has planned to write an article on the variety for the Journal. The proposition to divide the variety into two sub-varieties, Light Barred Plymouth Rocks and Dark Barred Plymouth Rocks, crystallized that intention into a determination to speak forth. During the New York show he remarked: "We eastern breeders have kept still too long." We replied: "Newton, if you will stay over a day after the close of the show we will get together for the purpose of printing what you have to say in the Journal."

Such was the preliminary that led up to the following discourse on the variety by Mr. Cosh. Few men are as well qualified to speak on the subject. It was of Mr. Cosh, the judge of the Barred Rocks at the Garden, that E. B. Thompson remarked some years ago: "No man has been quicker to see and appreciate the refinements that I have made in my birds from year to year." As judge of the Barred Rocks at the Chicago National show, Mr. Cosh has done more to advance the quality of the variety in the hands of the average western breeder than any other single influence working in the western shows. We mention this that the new breeder may know that what Mr. Cosh says in the following interview is pure gold and not merely yellow rust that incrusts upon baser metals. We wish that we could print more such articles as he here makes possible, but in twenty years of reading poultry papers we remember few contributions that have seemed to take out of their author's system so comprehensive a statement on a breed.

Mr. Cosh said:

"I am interested in the discussion of light and dark Barred Plymouth Rocks. I have bred Barred Plymouth Rocks for twenty-five years. I have judged, during the past seven years, the state Barred Rock meets in sixteen different states, as well as the leading shows in the United States and Canada. These have been big classes, where the best breeders were exhibiting, and the shows have paid extra to get a Barred Rock specialist to judge the classes. In other words, I have judged Barred Rocks where ever good birds are grown, and I presume that I have handled more good Barred Rocks than any chicken judge in the world.

"After all this long experience and wide opportunity for observation, I say without qualification, that the proposition to divide the Barred Rocks into two varieties is an experiment that I cannot approve. The proposition to divide the variety may appear plausible to a great many people. There are some attractive arguments in favor of the proposed division. There are, however, sound arguments why it should not be done, and I will set forth to you these reasons, based on my long experience as a breeder and judge.

Save Your Chicks

The old fashioned brooder is responsible for the great loss of young chicks and for many fires each season. If you have electricity you can save this loss and all worry with the

J. F. GREGORY, Dept. 58, LEBANON, MO.

"Every breeder knows that the variety now comprises pullet bred and cockerel bred birds. These actually exist. Therefore, a division of the variety would primarily affect the classification at the shows.

"Why do we show chickens? The answer is, beauty. That is what would attract us to any chicken, just as it would to a horse, an automobile, or a house in which to live. Now, when you put breeding birds in the show room you lose an element of attractiveness and beauty.

"The standard is drawn up to make the Barred Rock class one of the most beautiful and harmonious classes in the show room; exhibition males and the females match in shade of color. We have developed this uniformity and smoothness of color to a remarkable extent when compared to past years when single mating was more generally advocated.

"There is no reason why we should now take the cockerel breeding female and pullet breeding male, which are employed to produce our Standard exhibition males and females, and elevate them to a high rank as exhibition birds. Therefore, I believe that regular 1st and 2nd prizes should not be awarded on these breeding classes.

"As an illustration of the confusion that arises from a multiple classification that includes breeding classes, I may cite that at the last Trenton, N. J., fair, there were 8 pens of Barred Rocks and each pen had either a first or second prize ribbon on it. How can the farmer, young breeder, or visitor who sees such a display of blue and red ribbons understand the situation?

"It happens that I won 1st young exhibition pen at the Trenton fair. The 2nd prize pen was composed of very ordinary bred-to-day Barred Rocks, such as you could find in any farmer's barn yard. The pen was not worthy of a premium.

"If there had not been the special breeding classes there probably would have been five good exhibition pens in competition, instead of eight miscellaneous pens. These five good pens would have eliminated from the possibility of a second place the inferior pen that did win 2nd. As it now stands, the man who does not want to pay my prices for Barred Plymouth Rocks, will probably think that he can get something nearly as good from the breeder who won 2nd pen, but the fact is that if he pays over market price for such chickens he is paying too much. Now, to standardized light and dark Barred Rocks will simply add to the prizes and make more numerous such instances of poor birds winning.

"The purpose of the show is to place prizes on the best standard exhibition male and female, young and old. The female that is used in the production of that male and the male that is used in the production of that female are breeding birds. I want to go on record as saying that no living person is qualified to write a reliable standard for these breeding birds.

"No two males transmit in the same way. Sometimes they throw their color and barring to their female progeny and their cockerel get will be very ordinary. This is demonstrated in show after show where breeders will win on a beautiful cockerel-bred pullet and at the same time have no cockerel under a ribbon in the Standard exhibition class.

"I am not talking for Cosh, but for the Barred Plymouth Rocks. We don't want a wreck. I could breed dark Barred Plymouth Rock pullets just as skillfully as I do Standard exhibition pullets, if the two varieties should be adopted. But, I tell you before hand, freely and frankly, that I would employ a special mating to produce the dark exhibition females and a special mating to produce the light exhibition males, and I would have four matings instead of two. That would be inevitable.

"There is a feeling among some people who do not live in this age of advancement and modern quality, that in advocating only one variety of Barred Rocks, we leading breeders are blending colors by means of five or six matings. This intimates that there is a trick up our sleeves.

"There have been times when a bright, clean cockerel-bred female, too light for producing Standard exhibition cockerels, has been

(Continued on page 328)

We're Ready for Action

**"Famous"
Ancona
Eggs**

**for
Hatching**

All Winter long we've been getting ready. A few weeks from now we'll be going full blast—shipping thousands of "Famous" Ancona Hatching Eggs every 24 hours.

Orders are already coming in with every mail. As I look them over I am struck with this fact: Orders are running "big." Seldom before have I had

such a large proportion of good-sized orders—orders for 45, 50, 100 and 500 eggs. It looks to me as if this were going to be a mighty good poultry year!

I've told the poultry public about the splendid merits of "Famous" Anconas for many years, but it never gets to be an "old story" to me. Each season seems to make the "game" more interesting—each year the results my customers are getting from "Famous" Eggs seem to be more wonderful.

When they are babies, "Famous" Chicks are a delicate yellow and black in color. After a few weeks they take on the brilliant black and white plumage that distinguishes them later. This snappy, contrasty coloring makes them real beauties.

In the Big Time Poultry Shows, the "Famous" Strain has had a walkaway. For 15 consecutive years they easily captured the great majority of desirable prizes. In balance, in poise, in shape and coloring—they have all other strains backed completely off the boards.

At Madison Square Garden

the World's Premier Poultry Show, "Famous" birds copped most of the desirable prizes.

Special for Best Display in Single Combs

In the matter of egg production, "Famous" Anconas are again winners. They have the inborn egg-laying habit and the vitality to back it up. A "Famous" flock holds the the record of 265 eggs per bird in 365 days, and a backyard hen has the nice, comfortable score of 331 eggs in a single year!

All of which means that you can't go wrong on "Famous" Anconas.

If you have a Catalog, send in that order today. If not, write for one, or order anyhow!

H. Cecil Sheppard
President
International Ancona Club
Berea, Ohio

It ought to be a Winner

You never can tell when you look at a "Famous" Ancona Baby Chick—just what its future will be.

For all of them, except for the natural variation in coloring, seem to be as much alike as so many peas in a pod, the same fluffy bodies, the same bright eyes, the same healthy appetites, the same pep and life and vigor.

You can pick out almost any "Famous" Chick and say, "This ought to be a winner!" It may go a long way in the poultry show field—or it may prove a winner on the nest.

And speaking of winners, it looks as if 1922 will be a winner for the folks who buy good, thoroughbred, egg-laying stock. For the price of feed seems to be established at a fairly low level, while that of eggs is firm. Personally, I don't believe that we will see the low egg prices of last winter and spring for some time to come. So I say that 1922 ought to be a money-making year for the people who get started RIGHT.

You will find that your "Famous" Chicks are tenacious little customers—that they will cling to life when other chicks are cashing in their checks. You will find that they lay early—and consistently. You will find that they eat less—which increases your profit per dozen eggs.

So don't experiment with lesser breeds and unproven strains. Start the season RIGHT—with an order for these "Famous" Ancona Chicks. If you haven't a catalog, the coupon will bring you a copy.

251, 248, 202, 257, 230, 243, 240,
246, 267, 221, 233, 208, 238.

thrown into the pullet line. We did not go out of the breed. Again, we did not make the chicken; the Lord gave her to us in the season's raising, and we used her to advance the quality of the line.

"However, I want you to make this point, that the clean barred birds that are the admiration of the East are not the result of blending by means of re-crossing. It is absurd to think so.

"Buyers are afraid of a blended chicken, because they figure that it will not reproduce. Many of them, as a result, are breeding a type of chicken that won in New York fifteen years ago. Let us describe that chicken! He may have fine shape, richest and strongest underbarring, but the surface bar is not right for this reason: the bird's back has a rather short feather with only two or three surface bars. We all know that the tip end of all top feathers in the male is more or less v-barred and when this is all you have on the surface, the bird does not appear straight barred. More barring on the surface opens up the barring of the bird. The reason is that the white bar at the tip end of the feather is rarely as clean as the white bar in the center of the feather, and when only the tip ends show the birds look darker. From this the average reader should understand that one defect in the birds, as I have found them in the average Western shows, is their shorter feathers in back and narrower feathers in breast. This makes them darker in back; and in breast, the bars do not ring up as well as in the wider feathered birds. On top of this the bars are not as straight as it is possible to breed them. Not that there are not good birds in these shows; I am speaking of those points many of the breeders can improve.

"The light bar should be clean cut, the same as the black bar; if the light bar is clean cut on both sides it will not run into the dark bar. Get a bluish white and then the black bar will look after itself. The black should be a soft black, not full of metallic black. There is a quality of color in the blue toned Barred Rock that must be seen to be appreciated. You could print bars on a piece of cotton cloth or on a piece of silk and the tone of color would be different. Therefore it is hard to explain the tone of color; but this tone will follow the kind of feathers and barring I have described.

"In the matter of straight barring, it should be stated that straightness is not all due to more surface barring, which throws the straightest bars to view. Straightness is a straight across the feather barring due to bars that run in parallel lines. It is hard to describe. Many men think they have straight barring, and what they have may be an improvement on what they used to have, yet it is not what we would call straight in comparison with our best birds of today.

"These straight, clean barred birds tend to bring the cockered and pullet lines closer together. The result is that in every show that I have judged I have been compelled to classify the birds first, to make sure that the birds are properly cooped in their right classes before I start into judging. Of course, such confusion does not exist in the New York or in the large Canarian shows, where the managements have refused to make special classes for pullet bred males and cockerel bred females. Just think of a variety that breeders do not know how to enter and show managers do not know how to coop. Then you understand the confusion that will result from light Barred Rocks and dark Barred Rocks. Bear in mind that I like a nice cockerel bred pullet or a good pullet bred male as well as anyone, but many of the best breeding birds, for reasons already stated, could not win in competition with 'exhibition' cockerel bred females or 'exhibition' pullet bred males. If we are compelled to show these breeding birds I would suggest that they be shown as breeding birds, not using the same stickers or ribbons used in the Standard exhibition classes so as to prevent such great confusion. This is a point that I have been wanting to make for a long time."

Those who recommend a wide white bar and a narrow black bar will see that the solution of the modern clean colored male is somewhat wrapped up in a broader web in the feather with more surface barring.

Hatching Eggs--Baby Chicks

Every hatching egg and baby chick sold by Hillview Farm is guaranteed to be from some one of its winners. This means that you are getting the blood of the greatest Leghorn prize winners of the present day. It does not matter whether you buy hatching eggs or baby chicks, you get the same results. The breeder who is anxious to raise only the very best and at the same time raise prize winners for shows next Fall and Winter or for egg-laying contests should order today.

BENLD, ILLINOIS

For the Baby Chick's First Meals

IF you have tried Globe Chick Mash, you know. If you haven't, you ought to know what a tremendous difference this nourishing feed makes in the rapid growth of young chicks. They like it, and it's good for them. Puts flesh on their bones; gives them strong bones to carry the flesh.

Globe Chick Mash contains dried buttermilk, corn feed meal, sifted meat scraps, fine ground alfalfa meal, wheat middlings, oat flour, ground barley and calcium carbonate. It took years of experience and expensive experiments to get the proportions perfectly balanced. But it's the cheapest chick feed you can buy, judged by results.

Exercise is essential in keeping the digestive organs in good condition. The best way to induce exercise is to feed Globe Chick Scratch in a loose litter, so they will have to dig for it.

Ask your dealer for our folder, "Raising Chicks"; follow the GLOBE PLAN and you will raise bigger and better chicks than ever.

DICKINSON'S Globe Chick Mash WITH DRIED BUTTERMILK

The Standard for Many Years

Only Dependable, Honest Products could stand that test

Hungry Henrietta Isn't a World Beater

HUNGRY HENRIETTA
285 eggs worth \$11.87;
One Year's Production on
Globe Egg Mash

She's just a 3-lb. hen, raised on Globe Poultry Feeds at the Globe Experimental Plant. That's where we experiment; on *our* chickens, not on *yours*.

Hungry Henrietta consumed 80 lbs. of Globe Feeds last year, worth about \$2.40. This is an average amount of feed for one year and would represent an excellent return for the investment even though the egg production were much less. This little egg machine delivered 285 eggs, weighing 35 lbs. and worth \$11.87 at 50c a dozen.

Hungry Henrietta is just a plain, good hen, the kind you can raise if you feed them on Globe feeds from the start.

Your dealer sells Globe Feeds or will get them for you. There is no substitute. Insist upon Dickinson's.

THE ALBERT DICKINSON CO.
Chicago Minneapolis
Buffalo Boston Baltimore
New York Pittsburgh

IF you want to get your springers to market early or if you want to develop early layers you must feed your young chicks now with properly balanced, easily digested, nourishing food. Ubiko Buttermilk Growing Mash contains everything needed by the young chick for rapid and healthy growth. It builds big frames and develops feathers quickly. It is made of meat meal, bone meal, corn meal, wheat bran and middlings, ground oats, ground barley, linseed meal and dried buttermilk.

It analyzes 15 per cent protein, 3 per cent fat, 6 per cent fibre, 10 per cent ash.

Note carefully five important things about this ration: (1) Protein is of the right kind, mainly from meat and milk. (2) Fibre very low, insuring highest digestibility. (3) Buttermilk added to aid digestion and prevent disease. (4) Ash is phosphate of lime, from sterilized bone meal. (5) Great variety of ingredients, very palatable.

Get a supply of Ubiko Buttermilk Growing Mash today and insure the health of your chicks. Time is money. Save time in the development of your chicks and you will make money.

Write today for free booklet, "Raising Poultry for Profit," and Egg-Record Card, mentioning name of your feed dealer.

The American Poultry Association.

It would be hard for the average Western breeder to realize how the American Poultry Association has fallen away in the East. During the New York show a district meeting of the Association was called, but was not held, for the chairman forgot about it and stayed in his hotel.

Ed. Hayes, Organizer for the A. P. A., was on the Educational Program, billed to talk at 3:15 p. m., Saturday, January 28, on the "Importance of the American Poultry Association to the Poultry Industry." Mr. Hayes told us afterwards that before he got far in his speech he had to change it in order to hold his audience, for no breeders and exhibitors were present and the assemblage of hearers was interested only in elementary information on poultry raising.

In the premier show of the land, where a large number of the foremost breeders of the country were in attendance, all effort to corral a corporal's guard of fancier-breeders was in vain. This is the unvarnished truth, yet we are told that the A. P. A. is "a bigger and broader organization" than ever before. As far as phrases go, it is "bigger and broader." Its constitution has been revised twice in recent years, and more territory has been taken in each time. At present the constitution grants latitude to carry on almost any line of endeavor.

In the past 14 years, \$255,758.27 has been received by the Association and virtually all has been spent in various different activities. Yet, notwithstanding its reaching out, the Association is losing its common touch with the breeders of this country. All the great panaceas, all the glowing generalities that have been so eloquently expounded at the annual conventions, are proving to be miserable failures when tried out in practice. Alluring theories and inspirational methods have easily convinced the general run of the membership, and have been written into the constitution and influenced the fundamental attitude of the Association. But the many medicines are producing few cures and without great difficulty are proving to be destructive rather than constructive forces.

We need the A. P. A. That organization was conceived by men of understanding and vision. It has drifted away from the conceptions of its founders. But a return trip seems to be in sight, as is evidenced by the following letter from Joseph Dagle, well known poultry judge of Iowa:

"Knowing you to be a practical judge and breeder as well as a journalist, I am addressing you in regard to some things that I have been thinking over for a long time.

"I have been backward about putting my thoughts down in black and white because those who believe in a narrower organization, a purebred breeders organization, might easily be misunderstood; but the time has come when even the most persistent advocates of expansion will admit that the American Poultry Association is sadly in need of rejuvenation. The 'powers that be' are offering all sorts of advice. They are doing the best they can along established lines. But there is something grinding in the machine.

"The American Poultry Association in the beginning, was conceived by and brought into being by breeders of poultry. It was intended that the organization should be an association of breeders of poultry. As time has passed

Time for a show-down!

YOU'VE probably seen this Purina Double-Development Guarantee time after time. Surely by this time you must feel that Purina Mills could never make this wide-open, money-back guarantee unless Purina Chows do exactly as the guarantee states.

Purina Double-Development Guarantee

Purina Chicken Chowder and Purina Baby Chick Chow, fed as directed, are guaranteed to make your chicks grow twice as fast during the first six weeks as when fed grain feeds, such as meal, stale bread, cracked wheat or other cereals. If we fail to prove this statement we will refund your money.

we have drifted into what some people are pleased to term a 'broader organization,' by broadening the scope of the organization and taking into membership persons who are frank to state that they lay no claims to being breeders of Standard poultry.

"As a result we now find ourselves in an age when the affairs of the Association are being influenced, and occasionally dictated, by those who know little or nothing of the problems of the real breeder. That might be well enough if the breeding interests were small and insignificant, or if the breeding interests were subsidiary to other major interests. But to my mind the breeding interests are of major importance and everything else rests upon them.

"It is a fact that we poultrymen are the only group of people in this United States who know poultry breeding. The keeping of the breeds is reposed in us. The improvement of the breeds depends upon us. It rests with us to write the standards to which all purebred poultry shall be bred. It falls to us to say whether new breeds shall be recognized or not. It is for us to produce the seed stock, functioning like a nurseryman who produces seed stock and distributes it. Surely we are engaged in a major enterprise.

"I feel that we, as an organization, should be content to be an association of purebred breeders, fostering the breeds that we have recognized, and doing all that we can to make more and better poultry breeders. That is no small job. Moreover, it is a job that will contribute to the glory of agriculture, and every one who participates in it can be proud of his work and his connection.

"If we look at the purebred breeders' associations in other classes of live stock we see big, strong, representative organizations, made up of breeders' in their respective lines; they are a breeders' association, if you please, and the members make no apology for having a breeders' association.

"I feel that the American Poultry Association should be a purebred breeders' association, fundamentally and constitutionally. I would deem it a wise move to narrow down to that point. The A. P. A.'s money comes from the purebred breeders, and them alone. Why should it not be spent by and for the breeders in their own way?

"I know full well that such a suggestion will impress many people as not being 'big enough.' But there is danger of glowing generalities about a 'billion dollar industry' leading the organization far astray.

"I feel that we need a great and sweeping conversion to the A. P. A. The ship is in a rough sea and many of the best and strongest seamen are in their bunks fast asleep. We need more of the seasoned breeders on deck in order to make the port. Too many things are done now days for mere policies sake, in fact we are getting very much that way. It lies within the power of the poultry press to start the move homeward where the good chickens are being grown.

"The good breeders of Standard poultry should be left alone and allowed to work out their own destiny. Editors and managers must take a broader view of the situation, and not merely say the popular thing, or do the expedient thing. They should look to the future, and let the future, not the present, judge them.

"Let us get down to a practical basis from the breeders' standpoint. Why is it necessary for a breeder to carry membership cards in three distinct organizations, his local poultry association, his state association, and the national A. P. A.? This will lead to a man joining his specialty club and letting a federation of specialty clubs take care of national matters. Why not make membership in the A. P. A. so far reaching that it will cover all three organizations?

"Why not split up the Standard of Perfection into pamphlets, so that a young breeder will buy the Standard for his breed in the beginning, without delaying the need of buying the whole Standard? Sell the pamphlets at, say 50 cents the copy, or even less, so that every little breeder in the land, yes even the farmers would own the Standard to which their own poultry should be bred.

"Adopt a uniform set of show rules, and get out of the category of being a law-enacting, non-law-enforcing body, by making it obligatory on every poultry show association

Write for This Big FREE Cut Price Book

I want to send every man that reads this paper a copy of my latest big FREE Cut Price Catalog. I want you to get this bargain book and look it through from cover to cover. You will find that it contains the biggest Bargains on 150 styles of Fencing, Gates, Barb Wire, Steel Posts, Roofing, Shingles and Paints—that I or anyone else has offered you in the last 5 years. And when I say Bargains, I mean just that—the biggest values for the least money. I have cut, slashed and trimmed prices on every item in the big book to bed rock, but I have not reduced the quality one iota. I am still delivering the same dependable, double galvanized, open-hearth, rust resisting, fencing, gates and steel posts—the same heavy, durable, guaranteed ASPHALT roofing, and the same pure, Wear Best paints that have brought me over 600,000 farmer customers.

AND I STILL PAY THE FREIGHT

Don't forget that Jim Brown's prices are Freight Paid prices. Even with the big price reductions which I have made, I still pay the freight. That takes out all the guesswork about freight and gives you another big saving. My prices tell you exactly what your goods will cost you laid down at your nearest freight station. My direct from factory prices cuts out all unnecessary and costly selling expenses and has saved thousands of dollars for my customers. I want to show you how I can save a good many dollars for you, if you will simply use the coupon and get my latest prices. Read what my customers say about Jim Brown's prices and quality.

Saved 30c a Rod

Gentlemen:—I find that I have saved about 30 cents per rod by buying from you and yours is a better fence.

Harry Coffeen,

Name

Address

that is a member of the A. P. A. to abide by the rules.

"Make it obligatory on the part of every judge that has been granted a license to apply the Standard in the show room, to apply the Standard to the letter. This thing of running a year or two ahead of the Standard puts the smaller, out-of-the-way breeder at a tremendous disadvantage. Changes are made in the winning birds before he knows it, if he doesn't keep in pretty close tab with things.

"Please, Mr. Editor, do not regard me as one who would cause distrust to run through the ranks; my motives are far from that. I believe that we arrive at happy conclusions only after healthful discussion of questions, pro and con. I would be pleased to know your views on these matters."

Our views concur with yours, Mr. Dagle, and we believe that an overwhelming majority of the breeders of America would agree and join in any action that would contribute or help to make operative your plan of a pure-bred breeders' organization. The trouble is that we are bound by the present constitution and the machinery of organization that it has set up. The economics of the situation, however, are going to bring about a change. The Association is apparently going bankrupt trying to carry on its various lines of activity. It appears to be only a question of time until it will face defeat; and then it will turn back to the fundamentals and first principles which are the base on which the rickety superstructure has been raised. In the meantime alluring theories will have the platform, and great talkers with flying drive wheels and little balance wheels will dominate the conventions. But do not forget the finances of the situation. The adoption of the easy and soft panaceas will be painfully evident some day.

An Association of Utility Breeders.

The National Utility Poultry Society of England has issued a year-book for 1922 which contains 296 pages and cover. The list of the society's members, as it appears in printed form, looks like a directory of the British Isles.

This writer has been a life member of The Poultry Club, England, for ten years, and during this time does not recall ever having received such a splendid year-book from that organization. The Poultry Club is the old-line fanciers' association. The National Utility Poultry Society is the infant that is flourishing exceedingly well.

Conditions are different in America. Our Standard-bred birds are not the unusual and the odd. Our Plymouth Rocks, Wyandottes, Orpingtons, Reds, Leghorns, Minorcas, Campines, Brahmas and Langshans are unequaled as practical poultry. There is no need for an American utility society with a utility standard. In England such a society, composed of practical minded breeders, can thrive in competition with the English type of Cochinized Orpington and flat-backed, stilt-legged Langshan. In America, the man who derides the Standardbred bird is commonly looked upon as one who wants to sell "something different."

Pullets That Molt.

It is not uncommon for pullets to molt in the winter. Especially is this true of early hatched pullets that started to lay late in the summer and were pushed for eggs in the fall. Sometimes the winter molt is only partial and sometimes it is almost a complete molt. It checks egg production for the time being, but the pullets produce better eggs for hatching as a result of their rest...

Buckeye Brooders are Profit Insurance

EVERY egg hatched represents a possible profit; every chick that dies is a loss. That frightful mortality among young chicks has always been the bugbear of the chicken raising business. These deaths are unnecessary.

The development of the Buckeye "Colony" Brooder has completely revolutionized brooding, literally making three chicks grow where one grew before, cutting the expense to half and the labor to a fourth. With it, chick raising has become profitable, because it is no longer a gamble.

The Buckeye "Colony" Brooder will raise every raisable chick to quick maturity, because it prevents crowding, overheating and chilling and offers the best possible conditions for growth.

Write Your Guarantee

For years we have urged the purchaser to write his own guarantee, and we offer the purchaser's money back if, at the end of thirty days, he isn't satisfied.

Buckeye "Colony" Brooders are furnished for coal, gas or oil in five sizes -- 75 to 1200 chick capacity. Buckeye Lamp-heated Brooders care successfully for smaller lots.

With the unqualified success of these brooders, poultry raising is placed upon a safe basis, and profits are assured. Our new booklet, "The Revolution in Chick Raising," gives the reasons for it. Any Buckeye dealer will be glad to give you a copy, or we will mail one from the factory free on request.

This Big FREE Book Tells Why

You Can't Go Wrong on "CONTINENTAL" CHICKS

We want to send you our big, illustrated Baby Chick Book, **FREE** and Postpaid. We want you to see what a big difference there is in the quality of Continental Baby Chicks and the ordinary kind. This Free Book tells how our hatching eggs are selected only from pure bred and high egg producing flocks—how every egg is carefully inspected, and how they are hatched by the thousands in over 40 modern hatcheries, insuring greater vigor the day they are born, faster growth, quicker maturity, and earlier and longer layers.

It is said that "All Baby Chicks Look Alike"—but you can **SEE** the difference in Continental Chicks the minute you get them. They're bigger, sturdier, livelier, require less care, and will make you more money than any chicks you ever raised. Don't buy baby chicks until you get this book.

THEY'RE GUARANTEED

Pure Bred—Healthy—Safe Delivery

You take no risk whatsoever in buying Continental Chicks. They are fully guaranteed to be pure bred, healthy and husky and to arrive safely at your door. Any breed you desire. Leghorns, Rocks, Reds, Wyandottes, Anconas, Minorcas, Orpingtons, etc. Shipped anywhere, in specially designed boxes, by Prepaid Parcel Post. 40 Hatcheries. Shipments made from hatchery nearest you. You can't go wrong on Continental Chicks. Write today for our **FREE** Baby Chick Book and 1922 prices.

CURRENT NOTES AND COMMENT

Thompson Not Showing.

The Madison Square Garden show this year lacked the wonderful exhibit of E. B. Thompson. No other breeder in the history of live stock in America has won so many prizes over so long a series of years in the strongest competition of his breed. No other breeder of poultry has ever been able to go into Madison Square Garden and win every prize from first to fifth in every class of the variety, as Mr. Thompson has done the past two years. Even D. W. Young, in his palmist days, would lose a first or second prize here and there. Other great breeders have always had a weak spot in their entry somewhere.

It was a big decision for E. B. Thompson to make. He knew that some would say: "Thompson didn't show this year—must be slipping—what's the matter?" He knew that sinister thoughts would flourish. But he also knew that there were those who would understand the good side of his action and would read the finer side of his character.

In staying out of the Garden this year, he opened the way for those fine sportsmen to make a winning who have shown against him in the past. If he publicly announced his intention early in the season, the unquestionable result would have been the biggest entry of Barred Rocks that New York has seen in years. Breeders everywhere are hungry for a ribbon at the Garden. Mr. Thompson preferred to leave the competition and the honors to those who had displayed the courage, the sportsmanship and the enthusiasm to show against his Ringlets; and those loyal gentlemen who again entered this year, doing so with perhaps only a hope of a Garden ribbon, were surprised to find the competition to themselves.

* * *

Reads Like Buncombe.

Once upon a time there was a salesman who sold socks. He called them the "iron-clad," or something like that. They were really worth 25 cents a pair. He got 50 cents a pair for them, on the guarantee that if the purchaser wore a hole in the toe or heel within six months he could come back to the store and get another pair of the socks free of charge.

It was "a great scheme," for the purchaser really paid for two pairs of socks in the beginning, and when he came back on the seller for his second pair, in accordance with the guarantee, the seller simply gave him the second pair without comment. The seller had, in reality, sold two pairs at the start-off, but had delivered only one.

We are reminded of this story by the circular of a White Leghorn breeder who tells the prospective purchaser to "raise winners: we guarantee your success." The seller then proceeds to quote prices, as follows:

"A \$400.00 PEN FOR \$300.00."

"Pay \$150.00 now; pay the balance next winter after you have raised a flock of winners. If you do not win a blue ribbon from the young stock we will cancel the balance due. A pen of four choice females and a cockerel, mated by our experts, will start you right."

If the purchaser does not raise a winner, perhaps the seller will incur no great loss, for \$150 isn't a small amount to receive for a White Leghorn pen. That is a sale of a \$50 cockerel and four \$25 pullets. Fifty-dollar cockerels do not grow on gooseberry bushes, and a breeder doing "a land-office business" must have to scrape hard to get a whole lot of males worth that much or more.

When it comes to eggs for hatching, this same breeder quotes a similar alluring proposition on eggs that should produce winners at "medium-sized shows." Of course, if you want winners for "any show," regardless of competition, you will have to pay more; but

BABY CHICKS

8,000 of them ready every three weeks. Chicks from tried and proven producers, chicks that have White Hill Farm guarantee behind them, chicks from eggs laid by heavy producing lines, every one of them bred and raised right here at White Hill. Mine is not a hatchery but a breeding establishment.

93,075 Eggs

Laid during months of November, December, January, February, March and April by

1,000 Females

On actual records kept of 1,000 S. C. White Leghorn females from November 1, 1920, to April 30, 1921, the six poorest months in the year to secure high production, my records positively show they produced

93,075 Eggs

Most of these producers are this season in our Flock Mating Yards.

Bethany, Mo., September 13, 1921.
Mr. Wm. Shands,
Little Blue, Mo.

Friend Shands: Had intended advising you as to my winnings as I promised, sooner, but have been so busy since the close of the fair have neglected it.

The pen won first young pen in their class; the cockerel won championship cockerel of the show and the pen won championship young pen of the show; besides this I won two A. P. A. specials and a special from the National S. C. White Leghorn Club. I claim that's not half bad.

These birds were the big attractions of the exhibit and have had many compliments on them since.

With best wishes, I am,

Yours very truly,

W. C. BROWN.

NEW YORK

March 14, 1921.

Mr. William Shands,
Little Blue, Mo.

Dear Sir: A line to let you know that I received the chicks on the 11th, and on opening the box I did not find a dead one among the lot.

I will recommend your square dealings to everyone, and will say, that when chicks are on the road for three days, they must be strong and vigorous.

Thanking you for the extra chicks and wishing you further success, I will remain,

Yours truly,

ARTHUR F. ALLEN,
Manhasset, L. I., N. Y.

HATCHING EGGS

Ready now in lots of a setting up to 5,000. Every day here at White Hill our hens produce for our customers aside than for our own use, over 2,000 eggs—think of it, 2,000 Selected Hatching Eggs daily. Our catalog, Mating List and Special Circular tells you all about our methods, our guarantee of quality and satisfaction. Try White Hill Farm Eggs and be convinced.

REMEMBER

my flocks are line bred—the same rich blood lines that have produced my noted winners at this season's noted exhibitions. Whether it be stock you desire, baby chicks or eggs for hatching, I can supply you, and promptly. My large flocks and many matings assures you prompt delivery.

MISSOURI

Lay at 3 Months, 8 Days.

Kansas City, Mo., July 18, 1921.

Mr. Wm. Shands, Little Blue, Mo.

Dear Mr. Shands: This may, or may not interest you, but thought I'd put it over on you anyway.

You will remember me by referring to an order from me for 30 chicks when you sent an order of 25, and later of my coming to your place for the balance of the shipment.

At that time I told you of my little rooster crowing at 6 weeks old—that's only part of the story—this hatch came off April 8th. Last Saturday, July 16th, I got the first egg laid by one of the pullets. Figuring that up, you will find the time 3 months and 8 days—Isn't that going some.

Very truly yours, W. D. BEATTY,
R. 6, Box 356, Independence, Mo.

Baby Chicks—MATING LIST—Hatching Eggs

My 1922 mating list sent on request, fully describes in detail my sensational winnings in New York, Pennsylvania, Missouri, Kansas and Texas during the past season. A wonderful average egg record made by 1,000 females for the six coldest months of the year. Pictures of my buildings, equipment, my guarantees and prices, etc., on

\$185 Direct from Factory

LALLEY LIGHT and POWER PLANTS

Electricity for farms, rural places, summer cottages, etc., from \$185 to \$345

World's greatest farm light values. My famous model "HU" 1250 Watt capacity (plus) Lalley Light and Home Electric Power Plant sold until recently for \$625.00. You can get it, if you act promptly, for approximately one-half that price complete with battery ready for installation. Ample electrical capacity for your future needs. Proved by twelve years' service. Guaranteed. Approved by National Fire Underwriters. 30 days trial. Don't confuse this big 1250 Watt capacity Lalley Plant (which with battery has total capacity for 110 lights) with smaller plants. Other plants advertised at my price are only about one-half the capacity of my model "HU" Lalley.

If you have a gas engine I will furnish complete electrical equipment to go with it which will provide you with 1000 Watts **Only \$185.00**

My prices are from \$200.00 to \$300.00 below other plants of similar capacity and quality.

If you have an electric plant and need new batteries—write for my prices. State the kind of plant you have and the size of the battery you use. My prices will astonish you.

FREE Write today for free literature and information. Act NOW. Prices may be increased almost any day.

W. H. LALLEY, President
LALLEY LIGHT CORPORATION
Dept. 39
Detroit 10, Mich.

NOTE

HOEFT & COMPANY, INC.
407 No. Ashland Ave., Chicago, Ill.

for "medium-sized shows" \$35 eggs should do the trick. Now read carefully the offer:

"Fifteen eggs guaranteed to produce one blue ribbon winner. Price \$35.00. Terms, \$3.50 now. \$14.00 C. O. D. Balance of \$17.50 after winning first prize."

But this isn't all—200 to 230-egg stock are the poorest layers apparently kept by this White Leghorn genius.

Perhaps it is all true, and we are not keeping up with the progress—sort of getting in the old-fogy class. But just the same we are a little better satisfied to get out the American Poultry Journal from month to month without this breeder's advertisement.

* * *

An Australian Invitation.

C. A. House, celebrated English poultry judge, sailed from England for Australia in February, to judge the big national show at Sydney, Australia, April 12 to 20, 1922. Mr. House will officiate at fifteen other shows while on the island-continent of the South Pacific.

On the occasion of his departure abroad, the Poultry World, London, asked Mr. House to outline his suggestions to young breeders. He responded by summing up the matter in the following nine points:

- (1) Don't spend money on a lot of stock. Take up one breed and make yourself master of it. Don't dabble in two or three ere you know one.
- (2) Secure your initial stock from a reliable and proved breeder.
- (3) Start slowly; don't overload yourself. Put your money into one first-class pen rather than three or four second-raters. Good birds cost no more to keep than poor ones.
- (4) Good stock is essential, so are good houses and appliances. That way comes success. Many fail because they put good stock into poor houses. Result: Disease, disappointment and failure.
- (5) Use the best food; be regular in the feeding and general attention to your stock. Much depends on this.
- (6) Join your local society. Attend its evening shows and meetings. Seek to learn from the older members.
- (7) Don't fly too high at the start. Test your stock in your local show. Having conquered there, proceed to higher things.
- (8) Attend your first show. Ask the judge to point out where and how your birds failed. Go home, think over his words, remedy the faults in your stock, and have another try.
- (9) To sum up the whole matter: Be strenuous and persevering. Concentrate. If at first you don't succeed, try, try again. Success comes always to the earnest, thorough enthusiast.

A Bulletin on Bantams.

The various breeds of Bantams, their characteristics and methods of management are discussed and illustrated in Farmers' Bulletin 1251, a copy of which may be secured free of charge by addressing the U. S. Department of Agriculture, Washington, D. C. The various breeds, says the bulletin, have not been raised with the idea of egg production and, as a result, the average is not very high, probably around 100 eggs a year. The eggs vary in size, as do the different bantam breeds, ranging from 12 ounces to a dozen to 18 or 20 ounces. Some of the breeds have a tendency to lay for a fairly long period, but the Brahmas, Cochins and Silkies are inclined to broodiness. Since many of these kinds have been developed from the larger standard breeds they have many of the same characteristics. Reports collected from bantam breeders show that the average hen will eat from 25 to 35 pounds of feed in a year, which is about one-half as much as a hen of the Mediterranean breeds or one-third as much as a hen of the larger breeds would eat. The bantam breeds have a distinct utility value for egg production for family use. There is also a good demand for eggs for hatching and for breeding stock of good quality. Because of their small size these pigmy breeds often have the advantage over larger fowls where only a

very small space is available for the flock. They are easy for children to handle, and the ownership of a few bantams often is the beginning of a real interest in poultry raising.

"Sex Detectors."

A year ago this month we ran an editorial exposing the sex tester fraud. The U. S. Department of Agriculture now makes an emphatic statement on this humbug as follows:

"In spite of the close watch maintained by the various Government departments, the pseudo-scientist and quack still blossom forth occasionally, but they do not blush unseen for any great length of time.

"One of the most recent 'marvels' brought to the attention of the public was the sex detector which, so the manufacturers claimed, would indicate unfailingly the sex of the bird that would be hatched from an egg or whether or not the egg was fertile. By its use poultry raisers were promised approximately 100 per cent hatches and as high a percentages of females as they desired. But this was only a part of what might be expected of this simple but potent little device. It was said to tell the sex of oysters, butterflies, caterpillars, beetles, worms and even the sex of the animal from which were obtained such products as leather and cheese, although there would seem to be little difficulty in the case of dairy products. Even the criminologist was offered assistance, for it was claimed that the unfailing little detective would tell the sex of the person who shed the blood found dried on clothing or anywhere else.

"At the suggestion of the Post Office Department, the Bureau of Chemistry of the United States Department of Agriculture made tests of several of these sex detectors, with the result that all of the manufacturers have now gone out of business. Tests on eggs and other things by a number of persons showed that all the instruments were useless. No two persons got the same results with the same eggs, and eggs known to be infertile gave positive indications that they would hatch both pullets and cockerels."

Where Are We Going to Stop?

The ultimate possibilities in the matter of multiplication of varieties is well brought out in the following communication from A. W. Watson, Arkansas:

"After hearing many discussions pro and con in regard to admitting the Rhode Island White to the Standard, and having owned a copy of every edition of the Standard since the first, I do not have much fear of the A. P. A. making a serious mistake in 1923, but would like to beg a small space in your highly prized paper. If the A. P. A. admits the Rhode Island White, it can give no reason to reject a Rhode Island Black, Buff, Columbian, Laced or Partridge, all in both combs, and all under one breed by the name of the small state, Rhode Island. If this would not be a mistake to the fanciers as a whole, I don't know what would."

Looking Forward.

In regard to the exports of basic agricultural products, the U. S. Department of Commerce furnishes the following information:

"There seems to be a general impression that there has been a great falling off in the quantity of exports of agricultural products during the past year, due, no doubt, to the fact that the price has declined. As a matter of fact, the total volume of exports of the principal agricultural products for the year 1921 amount to over 20,000,000 tons, compared with 16,500,000 tons in 1920, and 10,500,000 tons in 1913. In fact, we exported the largest total volume of such products of any year in our history. The principal commodity is grain, including grain products, which alone amounted to 16,000,000 tons in 1921, as compared with 12,000,000 and 6,000,000 in 1920 and 1918, respectively. The exports of cotton exceed those of 1920, which is also true of meat products, sugar, oil cake and meal and tobacco. There was a slight decline in the exports of dairy products and vegetable oils.

"The cause of our enormous increase in food

(Continued on page 342)

Insurance For Your Baby Chicks

H-O STEAM-COOKED CHICK FEED is the cheapest and best feed you can buy because it saves the lives of the chicks that pay your feed bills.

When you give your new-hatched chicks **H-O STEAM-COOKED CHICK FEED**, you are insuring them against bowel trouble, White Diarrhea and kindred ailments that cause chick deaths. You are giving them a healthy start in life and they will grow and develop into profitable productive birds in record time.

H-O STEAM-COOKED CHICK FEED contains the proper proportions of muscle, energy, bone, heat, blood and feather producing elements required by young chicks. The grains are cut to pin-point fineness and steam-cooked by the wonderful H-O Process which makes **H-O STEAM-COOKED CHICK FEED** readily digestible. It will keep sweet and clean indefinitely.

Feed your chicks **H-O STEAM-COOKED CHICK FEED** and know that you will raise every normal chick. Watch them develop into the finest specimens you have ever had and get the profits from these productive birds.

H-O STEAM-COOKED CHICK FEED is packed in the handy five-pound package obtainable from your local grocer; or get a supply from your feed dealer.

Sample of this wonder feed
and literature free, on request.

Saves the Lives of Baby Chicks

The 5 Barred Plymouth Rock Pullets winning all prizes—1st, 2nd, 3rd, 4th, 5th—at Madison Square Garden, New York, 1921, owned, bred and exhibited by E. B. Thompson, Amenia, N. Y.

Wilburtha Poultry Farms

65 Birds Under Ribbons Madison Square Garden, 1922

1922 PRICES OF BABY CHICKS AND HATCHING EGGS

Jersey Black Giants

The Giants are the sensation of the century. While the heaviest of all domestic fowls, they are active and great hustlers. Good layers of big, brown eggs—the finest table poultry.

At the last Garden Show, 216 splendid Giants were exhibited and were hailed by the New York press as being the feature of the show. The center of attraction was Wilburtha's first cockerel, acknowledged to be the best Giant male produced to date.

Our Grade AAA pens are headed by such males as First Cockerel Garden, 1922; First Young Pen Male, Garden 1922! First Cock and Cockerel, N. Y.

State Fairs, 1921. Eggs, \$1.50 each; Chicks, \$3.00 each.

Grade AA pens are headed by corking good males, including Third Cockerel, Garden, 1922; Second Old Pen Male, Garden, 1922; Second Cockerel, N. Y. State Fair, 1921. Eggs, \$1.00 each; Chicks, \$2.00 each.

Grade A pens are made up of mighty good all-round birds. Eggs, \$30 per 100; Chicks, \$75 per 100.

White Plymouth Rocks

Wilburtha is the home of the world's finest flock of the champion middle-weight breed—White Plymouth Rocks. At the recent Garden Show there was a corking, strong class, remarkable for its high quality. As usual, Wilburtha won Best Display, the coveted award which proves strength in both sexes and all ages. Our matings this year contain many of the choicest birds on earth.

Grade AAA pens are headed by notable males, including First Young Pen Cockerel, and First Old Pen Cock, Garden, 1922; First Cockerel, N. Y. State Fair, 1921; First Young Pen Cockerel, Garden, 1921. Eggs, \$1.00 each;

Chicks, \$2.00 each.

Grade AA pens, Second Cockerel and Third Young Pen Cockerel, Garden, 1922; Second Cockerel, Garden, 1921; Second Cockerel, N. Y. State Fair, 1921; also sons of high-record layers. Eggs, 75c each; Chicks, \$1.50 each.

Grade A—Free range flocks headed by sons of heavy layers and grandsons of "Prolific Queen," who made a record of 301 eggs in one year, Vineland Laying Contest. Eggs, \$20 per 100; Chicks, \$40 per 100.

S. C. White Leghorns

During the present season Wilburtha White Leghorns have won eight blue ribbons and many other leading prizes at Madison Square Garden, N. Y. State Fair, and N. J. State Fair, where big classes are the rule and competition mighty keen. Our Leghorns are of the true type—good size, fine head points, beautiful tails, pure white plumage. Such blood will strengthen any flock.

Grade AAA pens contain such males as First Pen Male, Garden, 1921; Second Cockerel, Garden, 1920; First Cockerel and First Cock, N. Y. State Fair, 1921. Eggs, \$1.00 each; Chicks, \$2.00 each.

Grade AA pens are headed by such clean-cut, snappy males as Third Old Pen Cock, Garden, 1921; First Cockerel and First Cock, N. J. State Fair, 1921; sons of layers with remarkable egg records. Eggs, 75c each; Chicks, \$1.50 each.

Grade A pens include many really superior specimens, the average quality being very high. Eggs, \$15.00 per 100; Chicks, \$30.00 per 100.

For quick shipment, or to insure your order being filled on the desired date, order direct from this ad. The earlier we know your wishes the better we can serve you.

Write for the 1922 Wilburtha Mating List, which describes in detail more than fifty pens—or matings—of America's best Jersey Black Giants, White Plymouth Rocks and S. C. White Leghorns. We will gladly send you a copy FREE.

exports since 1913 does not lie so much in decreased production in Western and Central Europe—for that area is rapidly recovering its normal production. The major cause of our increased market abroad is the total failure of Russia as a food export country. Russia formerly exported from 8 to 10 million tons of food, all of which has ceased, and thus this food base for Western Europe is transferred to the United States. The economic degeneration of Russia has gone to such depths that a recovery of her agriculture to a consequential export basis is extremely unlikely for a number of years to come."

In other words, Europe is a regular suction pump, drawing basic agricultural products out of the United States. That is good for American agriculture. It accounts in no small part for the rise in the price of wheat, also in the price of corn from 20 to 40 cents a bushel on mid-western farms. It accounts for the general increase in the prices of other farm products which is now noticeable.

How is Europe to pay for her imports of wheat and lard and cotton? She has sent to the United States her gold and securities. What she retains is her population and its human labor. She must pay for her imports by exporting, striking a balance by exchanging goods.

When Europe's exports come, American industry and American cities will have to meet the competition. At the present time, the farmer has been liquidated, but the cities are still on a relatively high-price level. That has put the poultryman in a peculiarly favorable position. His raw material, in the form of corn, wheat and oats, has been cheap. His finished product, in the form of eggs and poultry meat, has been sold in a remunerative city market. His margin has been wide. Even the inefficient, high-cost poultryman has made money. He simply couldn't help it.

As buying power in the cities approaches a parity with farm prices, conditions will call for greater efficiency on the part of the poultrymen. This is a condition only to anticipate. We mention the matter at this time because two or three years hence are only two or three shifts in the poultry raisers' operations—only two or three growing seasons.

However, now is the time to look ahead. Critically examine the quality of your birds. Consider well the need of high-grade standard stock. Reflect on the need of improving your methods, and your stock, starting this spring. You cannot make a better investment than to buy several settings of 20 eggs—a hundred dollars' worth—provided you are in the poultry business to stay. Do not "pooh-pooh" standardbred poultry values. Put some cash into those values, for the purebred business is not merely a fair-weather friend. While some years are better than others, the purebred business has endured through all the vicissitudes of business.

Having purchased the good eggs for hatching, read and study everything you can on the mating and breeding and judging of purebred poultry.

Now that we have told you this, we have discharged what has been on our mind, impressing us as an obligation to our readers. The issue rests with you. We have presented the arguments, but we can supply neither the understanding nor can we imitate the action. It is for you to think and to act.

This is not a "Calamity Jane" editorial. The soldiers' bonus, the insistent demand for extending foreign credits, the payment of liberty bonds, the unprecedented expenditures for public improvements, a protective tariff—all indicate a sort of post-war boom. We look for good times in the near future. But beyond the next few years there is going to be continued readjustment, and as we view the situation in the long run ahead, the poultry raiser who makes a determined effort to get on a Standard-bred quality basis is going to be in the best shape to meet the inevitable ups and downs of a road upheaved and leveled by a world war.

Important Meeting.

The Post Office Department will meet representatives of the railways, express companies and the poultry industry at Chicago, (date to be named later) to consider shipping market and hatching eggs by mail and express. President Rigg has appointed Geo. Cugley, Springfield, Ohio, chairman of a committee to represent poultrymen.

OKTUSHA WHITE WYANDOTTES

(A Standard Bred-to-Lay Strain)

Won at the recent Cleveland Show: 2 and 4 on cocks; 1 on hens; 2 and 5 on pullets.

COCKERELS FOR SALE Strong, vigorous birds of good Wyandotte type and color, from high egg producing matings, that will make excellent breeders, shipped on receipt of price, \$5, \$7.50, \$10.00 and \$15. Satisfaction Guaranteed.

EGGS Mating List ready for Mailing February 1st. Send for your copy now. Ten selected Breeding Pens of real Wyandottes of royal blood lines—very strong and well balanced matings in every way.

A Message To The 1922 Poultry Raiser

You, Mr. Poultry Raiser, are about to start your season's poultry work, either in the operation of an incubator or by purchasing the chicks already hatched. Whichever way you may decide upon, you want to be sure that you are on the right road. Thousands upon thousands of beginners in the poultry business fail each year because they are not properly guided from the start.

Realizing that there are several controlling factors in the success or failure in poultry keeping and if other important subjects besides feeds are not properly considered, failure results.

Being in the poultry business ourselves for the purpose of not only keeping in close touch with our own feeds, but also to know what it is possible to accomplish with all other formulas, we are in a position to know just what may be obtained from our feeds and methods of feeding, which we call

The FUL-O-PEP Way

Therefore, for 1922, we will take upon ourselves the responsibility of making your poultry work even a greater success than you felt were possible, if you will place yourself in our hands, that is, simply write us a letter, telling us that you would like to have us assist you to the best of our ability in helping you to raise your young chicks, also growing them rapidly for early laying maturity, in fact, ask us for our assistance and co-operation, just as you would ask a neighbor, a fellow-poultryman, to do you a favor occasionally. Upon receipt of your letter, we will outline a working plan for you to follow out to the letter, one which we know will be certain of desired results.

What others are doing, you should do, and remember when you buy poultry feed, buy from those who are in the poultry business themselves and know all the little ins and outs of the business.

of Aristocrats*

Holterman's Now Raised The

Mr. Holterman, in the past, had grown and fed his Aristocrats on feeds made according to his own formulas, just as many other large and successful poultrymen have been in the habit of doing, until the Ful-O-Pep Way discouraged the practice. Now, Mr. Holterman does not hesitate to feed according to our instructions and in his 1922 catalog Mr. Holterman says: "NOW FOR

FEEDING ARISTOCRAT BARRED ROCKS, SO AS TO GET BEST RESULTS THE YEAR AROUND, MY SINCERE ADVICE TO MY CUSTOMERS IS TO WRITE TO THE QUAKER OATS COMPANY, CHICAGO, ILL., FOR THEIR BOOKLET ON FEEDING. THEY WILL SEND IT TO YOU FREE, ESPECIALLY SO, IF YOU WILL TELL THEM THAT HOLTERMAN TOLD YOU TO WRITE. THEN FOLLOW THEIR PLAN. THIS IS SIMPLE AND IS EXPLAINED SO CLEARLY THAT ANYONE CAN CARRY IT OUT. THUS FAR IN ALL MY YEARS AS A BREEDER, I HAVE FOUND THIS TO BE THE MOST SATISFACTORY WAY TO GET RESULTS."

The Quaker Oats Company

FUL-O-PEP Winners

An "Aristocrat"

Barred Rock male in all his stately glory. A sire of famous exhibition prize winning cockerels. W. D. Holterman tells us that the noteworthy vigor and sturdiness of his Aristocrats is due partly to the fact that they receive Ful-O Pep Growing and Laying Mash.

Aristocrats FUL-O-PEP MASH Way

The phenomenal results obtained by this master Breeder at the "Home of Aristocrats," Ft. Wayne, Indiana, is only further proof that The Ful-O-Pep Way is the ONE sure way to poultry success.

You too, Mr. Poultryman, will find the Ful-O-Pep Way will bring you greater returns than any other method. Take the advice of Mr. Holterman, fill out coupon on next page, send it to us and get a free copy of our new 1922 Ful-O-Pep Way—it shows you just exactly how to follow the simple, easy, Ful-O-Pep plan.

We will be only too glad to help you out with any of your poultry problems. We are interested in the success of every poultry raiser and after you have adopted the Ful-O-Pep Way, we want you to feel perfectly free to write us for advice concerning any of your poultry problems. We will be only too glad to assist you.

SCRATCH feeds do not make eggs" is the slogan we adopted in our nation-wide campaign for greater poultry profits the Ful-O-Pep way. Since making this assertion and driving it into the homes of thousands of poultrymen and women, to the effect that we had made a discovery of great importance and that they had discarded the old method for the Ful-O-Pep way with immediate results. Many of these reports are little less than phenomenal in the production of eggs obtained. The same also is true in relation to the making of rapid growth. It was found, likewise, that an all-grain ration failed to grow and mature the greatest number of all chicks hatched.

The theory was correct and based on the discovery of the Ful-O-Pep Dry Mash and Growing Mash—against the customary methods of feeding all-grain rations.

The gist of the Ful-O-Pep way is to so manage the young and old stock that they consume twice as much mash feeds as the grain ration—and giving grain only once per day—at roosting time.

The Ful-O-Pep Mash is consumed by the young and old in greater quantities than any other ground feed—and yet the cost of producing the eggs and meat is just about one-half. This is partly due to the oatmeal content, as well as the great feeding value of the many other ingredients.

In conjunction with the keeping of the Ful-O-Pep Mash before the fowls at all times, Ful-O-Pep Scratch Grains are given one hour before roosting time—a quart to each one dozen hens—and to the young stock all they will eat up clean in about twenty minutes. This is for the hens "up-keep" and to supply the growing stock with a more sustaining ration while roosting. Ful-O-Pep Mash is easily assimilated, and if the last feed of the day were not grain, the fowls would become hungry before morning.

Thus is explained the Ful-O-Pep way for making eggs and rapid growth. Once tried always used.

The Quaker Oats Company
Chicago, Ill.
Gentlemen:—

I am using your feed as prescribed by you, for a Backlotter and meeting with grand success was at Florida State Fair and one of your representatives gave me a book on your goods, and I started then and I am doing good. I can't say too much for Ful-O-Pep. Very truly yours,

THIS issue of the Ful-O-Pep Poultry Calendar is so arranged that it can be used as a text book—and from its teachings a thorough and practical knowledge of the poultry business may be acquired. The object of the Ful-O-Pep way is to make poultry keeping a certainty from the start—whether one has had any previous experience or not.

Read the information given on page two. This is the password to the complete success of our method. Then read and thoroughly digest each succeeding page, making notes as you go along, and with this information plan your work, step by step. Send rather make the journey in easy stages, mastering one problem before attempting another. Avoid the mistakes of thousands who have attempted to "plunge in"—by going only as fast as we advise—and then not until we say "Go." Keep in close touch with us. Don't remain in doubt longer than it takes Uncle Sam to carry the mail. Thousands are succeeding the Ful-O-Pep way, why not you?

Measurements of a Good Orpington Male.

During the Garden Show the White Orpington Club met to discuss changes in the standard. The carriage of the male tail was a particularly troublesome section. One thing is certain, no flat-backed, flat-tailed males will ever rival in graceful lines the bird whose back rises in a concave sweep to a well-spread, well-covered tail carried high enough to indicate that the bird has life.

On the question of Orpington type, Wm. Moore of Canada has some data that are interesting because they were secured from actual measurements. Says Mr. Moore: "These big, massive cocks such as are standing in the aisle here in New York will measure about 10 inches across the shoulders at the cape. They carry their width pretty well back, tapering down to about 9 inches across the saddle.

Well proportioned Black Orpington Male.

"If you will take one of these good males, that is just about right, and measure the distance from the top of his comb to his hock joint, you will find that it is about 20 inches. He is as long as he is deep, as you will find by measuring him from the outer limits of his tail to the outer limits of his breast. That measurement is also about 20 inches.

"Looking at the bird, side view, there are three distances that are about equal to one another. Just as a man's head can be divided into about three equal sections—forehead, nose and from the nose to bottom of chin—so you will find three equal divisions in the profile of a good Orpington cock. From the shoulders to a line level with the points on the comb, the distance should measure from 5½ to 6 inches. From the shoulders to the horizontal underline of the wing, the measure is 5½ to 6 inches. From the underline of the wing to the hock, there are 5½ to 6 inches more. The hock should be about 3½ inches above the ground."

* * *

Poultry Judges.

We are in receipt of the following letter in regard to the judging at a recent show in Ohio:

"I read with much interest your editorial remarks in the American Poultry Journal about the proper type of a Leghorn. You condemn very strongly the small Leghorns, with high shoulders and a back that slopes down like the roof of a house, yet there are some judges who are unable to discriminate between this type and the true Leghorn type. Such birds won at our local show here, and it is not only discouraging but disgusting to any one who is making a study of the breed."

It is unfortunately true that there are some poor judges. Perhaps a large number of those judges who have a general license are incompetent to handle many breeds. However, could they not be made good judges if they had the opportunity to see and study good quality?

WISCONSIN WICKLESS-AUTOMATIC Colony Brooder

Only \$10²⁵ and up
EXPRESS PREPAID

30 Days Trial

Why Pay More?

You cannot get anything better no matter how much more you pay. The Wisconsin is the most successful brooder on the market. Being wickless—there is no smoke—no soot—no odors. Has automatic oil control—can't go out nor overflow—absolutely safe and maintains even flame, day or night. No valves to set or adjust. All this is due to the wonderful superiority of the heater.

What's Under the Hood?

That's what counts in a brooder. The heater under The Wisconsin is a marvel of efficiency. You set the oil for size flame you want and it never changes. Flame won't go up and down, like ordinary heaters—it stays always the same. The patented oil control, midway between oil fount and burner, does the trick together with the metal vaporizer in the burner. You will be amazed at the perfect working of this ideal brooder.

Order Direct from this Ad

You take no risk in ordering direct from this ad. Wisconsins are sold on 30 days trial, money back if not satisfied. You'll never regret buying this remarkable brooder and our low prices are Express Prepaid. Think of it!

CARBOLA
The Disinfecting White Paint

Dirt Breeds Disease

It is the healthy, vigorous chickens—those that are free from lice, mites, etc.—that thrive and lay eggs. You can not have healthy chickens if their living quarters are dirty, dark and gloomy.

is a paint in powder form combined with a disinfectant many times stronger than pure carbolic acid. It is ready to use as soon as mixed with water and can be applied with either a brush or a spray pump. It has no disagreeable odor and will not blister, flake or peel off. It is non-poisonous—harmless to the smallest chick—and its use in poultry buildings, besides increasing the light and improving the appearance, helps put them in the clean, sanitary, condition that is such a great help in preventing the ravages of lice and mites and the introduction and spread of the many contagious diseases that affect poultry and livestock.

Use It Instead of Whitewash and Disinfectants

in your poultry houses, stables, dairies, outbuildings, etc., and save yourself time, labor and money and get better results besides. Carbola is used and endorsed by thousands of poultry and stock farms and by many experiment stations and agricultural colleges, who indicate the good results it gives by constantly reordering. One gallon (a pound of the powder) covers about 200 square feet of wood, brick, stone or cement surface.
